#### **Report Highlights:**

**Hot, dry weather and depleted irrigation resources in the North Central Plain, along with an early frost in the Northeast hurt the 1999 corn crop. The first major province to announce sharply reduces their 1999 protected corn price as compared to 1998. New export sales are sparse, but ports are busy filling contracts made in late summer. This report includes detailed trade data through September.**

Includes PSD changes: Yes  
Includes Trade Matrix: No  
Unscheduled Report  
Beijing [CH1], CH

(Detailed trade data for all grains at end of report)

## **Corn**

### Production

Surveys of the North China plain continue to indicate significantly lower production than last year. A period of dry hot weather seems to have stretched irrigation resources. This year's dry spell was not a particularly long one and some farmers even noted the arrival of some timely rains that limited damage to the crop. However, farmers appear to have been surprised by how quickly their irrigation water ran out. Twenty years of increasingly heavy use of electric wells has seriously depleted the region's aquifer, and farmers are now finding they cannot access the amount of water they once were able to. Farmers appear to have often abandoned portions of their crop mid season to focus what water resources were available on other areas. Accordingly, a significant percentage of the land will likely not be harvested.

An early frost in Northeast China appears to have left the corn there with abnormally high moisture levels. However, since the Northeast provinces still are using a maximum 18 percent moisture standard (they had indicated they would switch this year to 14.5 percent, but this has apparently been delayed at least one year), this will probably have a relatively small effect on output statistics. However, it will definitely hurt the quality, forcing feed millers and other processors to increase consumption to meet their nutritional and other standards.

### Prices and Policy

Recently the Heilongjiang Grain Bureau announced a combined procurement and protected price of 800 RMB (\$97 per ton) for the 1999 corn crop. Heilongjiang is one of the major Northeast China grain producing provinces. This price marks more than 180 RMB (\$22) drop from last year's procurement price, which is the price paid for each farmer's procurement quota (usually less than 10 percent of output). It is a 120 RMB (\$15) less than the protected price which the Grain Bureau is supposed to pay for any and all corn presented to it. In actuality, though, the Heilongjiang Grain Bureau, like all the provincial grain bureaus, could not maintain the 1998 protected price and for months wholesale prices have been well below this price. Over the last month alone, prices have dropped 65 RMB (\$8) to near the 800 RMB procurement price. The Heilongjiang procurement policy conforms with guidelines set by the central Government and undoubtedly all other provincial grain bureaus are likely to set similar market-level prices. It seems to indicate, for now at least, that the Government is willing to let market forces determine prices as it seeks to reduce stocks that have accumulated as a result of several years of government price supports.

### Trade

China has sold very little corn for export in recent weeks. However sales made in late summer should keep the ports busy through the rest of the calendar year. The Chinese appear to be watching the markets, hoping for a surge in prices similar to what occurred in August of this year, when they were last active. Despite a poorer crop this year as compared to last, production could once again exceed domestic consumption. So the need to export still remains, perhaps even at current low world prices.
