July 2021

# World Agricultural Production

## Russia Wheat: Favorable Weather Boosts Winter Wheat Yield while Heat Threatens Spring Wheat Prospects

Russia wheat production for the 2021/22 crop year is estimated at 85.0 million metric tons (mmt), down 1 percent from last month and down slightly from last year's record, but up 9 percent from the 5-year average. The estimate includes 64.0 mmt of winter wheat and 21.0 mmt of spring wheat. USDA crop production estimates for Russia exclude forecast output from Crimea. The all wheat yield is estimated at 2.93 tons per hectare, down 2 percent from last year. Total harvested area is expected to increase slightly from last year to a record 29.0 million hectares.

### Russia Stavropol (North Caucasus District): MODIS NDVI

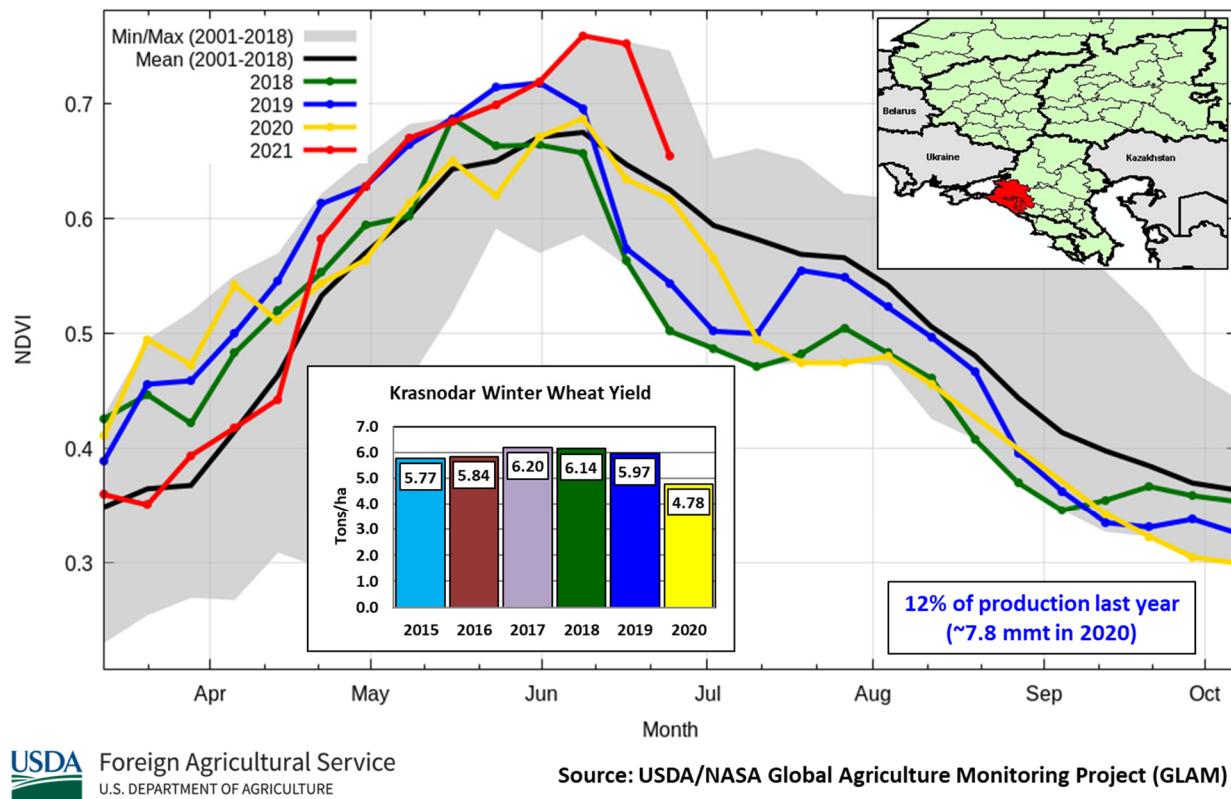

Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Winter wheat area was revised down due to reports of increased winterkill from ROSSTAT, Russia's statistical agency. The most likely reason for this is unfavorable weather between late-February and early-March. Warm temperatures caused melting of the water in the top layer of the

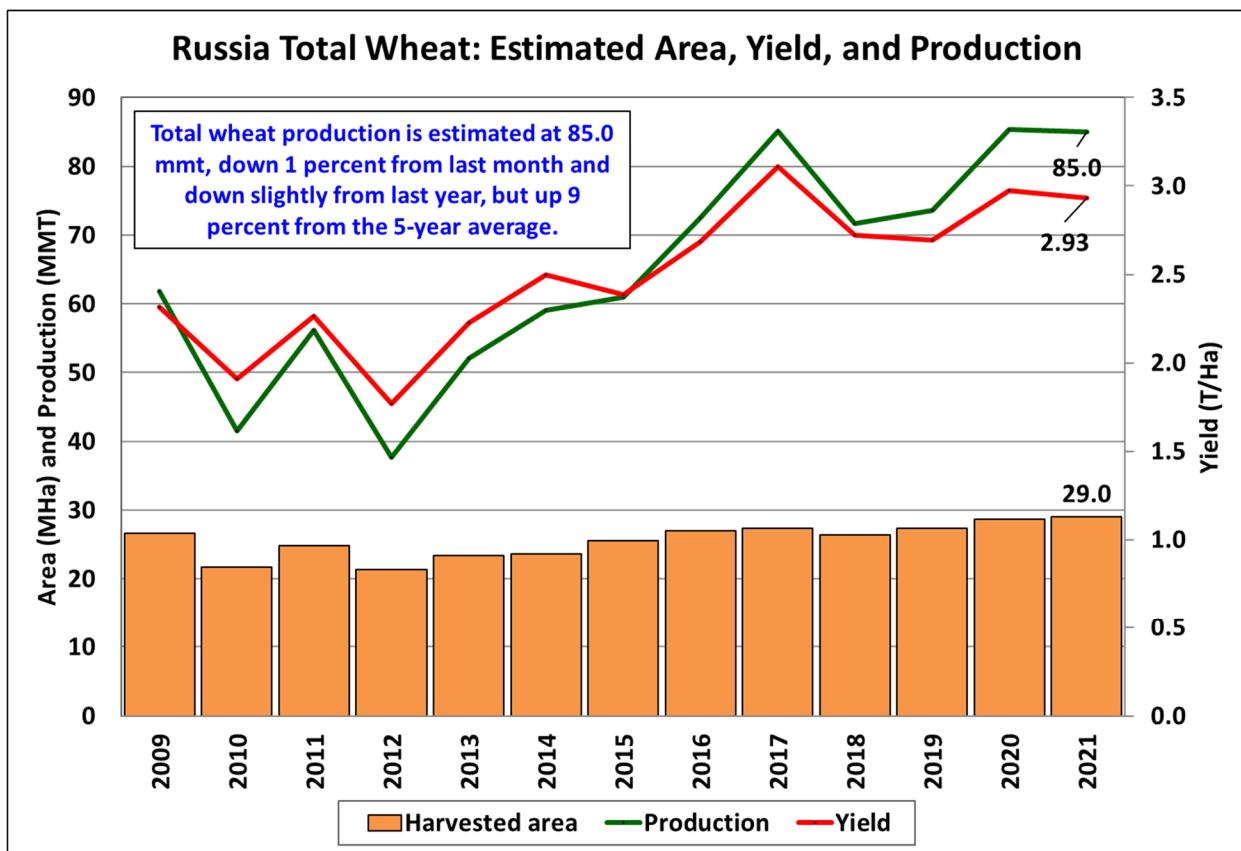

Approved by the World Agricultural Outlook Board

soil profile in late-February. Cold weather, which spread mostly through the Central and the Volga Districts in early-March caused the soil water to re-freeze, damaging winter crops. This information was supported by satellite imagery from the Soil Moisture Active Passive (SMAP) system, which provides routine soil moisture and freeze/thaw observations. According to the Russian Ministry of Agriculture report from June 21, part of the damaged areas was re-planted with spring wheat and other crops, which resulted in higher spring wheat area than initially forecasted.

## Russia Krasnodar (Southern District): MODIS NDVI

Winter wheat typically flowers between late-May and early-June. Timely rainfall provided beneficial moisture for crop development, boosting winter wheat yields across the most southern districts of Russia, the North Caucasus, and the Southern Districts. Satellite-derived Normalized Difference Vegetation Index (NDVI) depicts a jump in the vegetation vigor during the key yield formation stages indicating high yield potential this season. Conversely, the spring wheat yield, was revised down relative to last month due to heat and dryness in the central spring wheat growing areas.

Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Source: USDA PSD Online

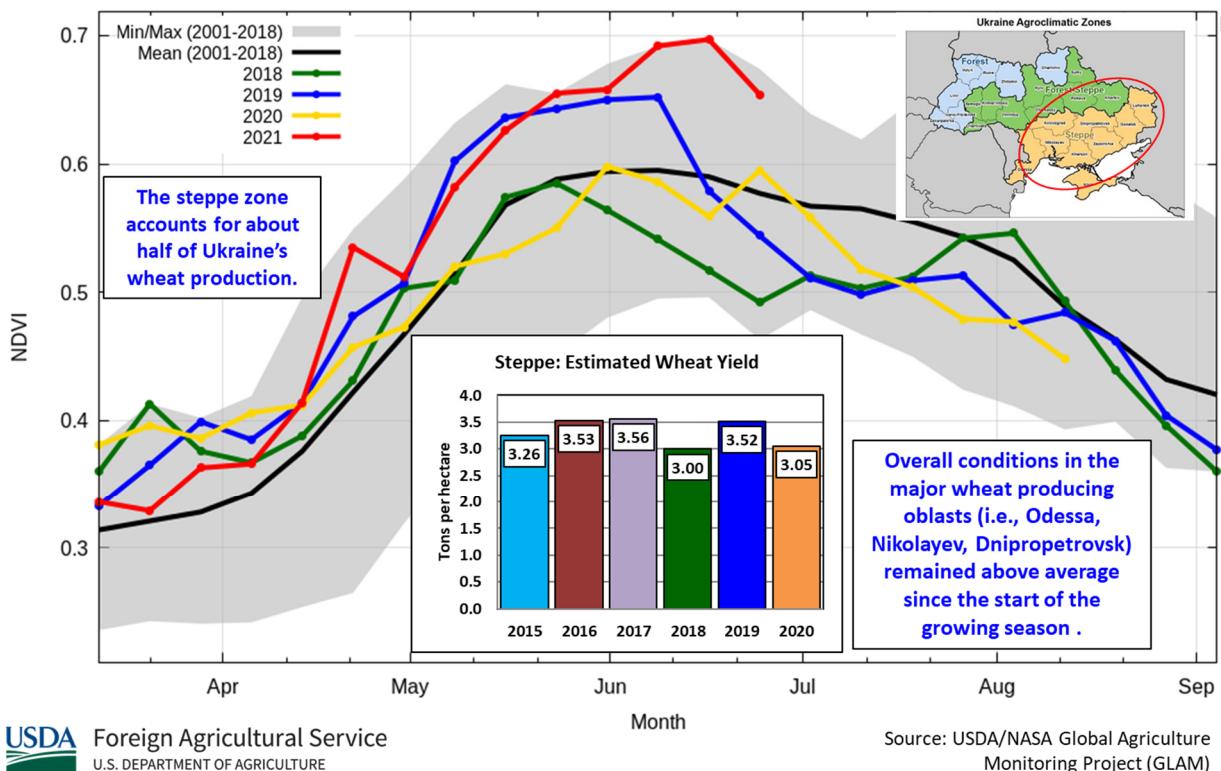

Winter wheat is grown in European Russia (including the Southern, Central, Volga, and North Caucasus Districts) and typically accounts for about 70 percent of production. Spring wheat is mainly planted in the regions bordering Kazakhstan, notably the Volga, Urals and Siberian Districts of Russia. Harvest of winter wheat this season began on time and has started in the southern production regions. Harvest of spring wheat will begin in late August.

Area, yield, and production estimates for Russia winter wheat and spring wheat are available on PSD Online. Select “Downloadable Data Sets” and open the zipped file for “Russia Wheat; Winter/Spring Area & Production” (For more information, please contact [Iliana.Mladenova@usda.gov](mailto:Iliana.Mladenova@usda.gov).)

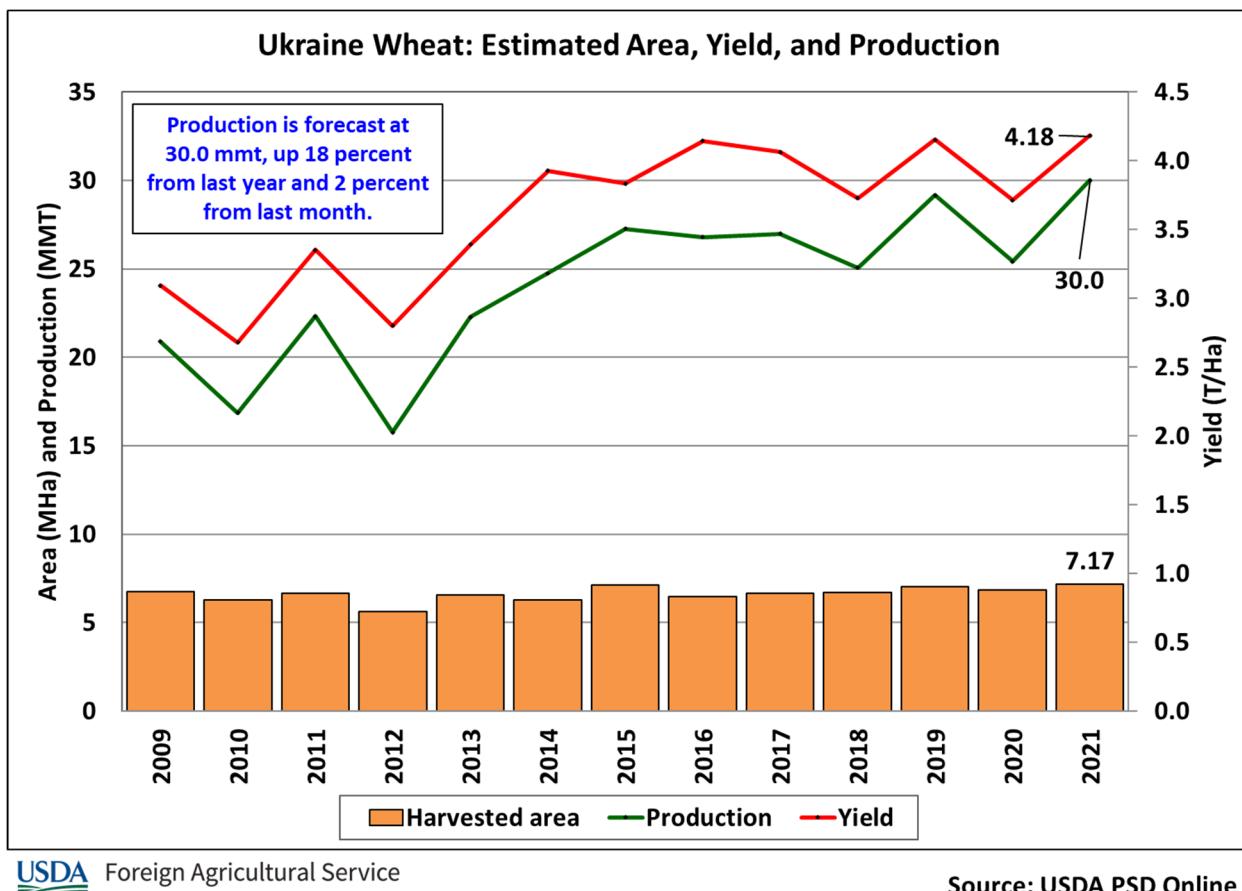

#### Ukraine Wheat: Higher Yield Boosts Production

Ukraine wheat production for marketing year 2021/22 is forecast at 30.0 million metric tons, up 18 percent from last year, 2 percent from last month, and 12 percent from the 5-year average. Yield is forecast at a record 4.18 tons per hectare, up 13 percent from last year and 2 percent from last month. Harvested area is estimated at 7.2 million hectares, up 5 percent from last year.

# Ukraine: Steppe Zone

Winter wheat accounts for about 97 percent of Ukraine wheat area. The month-to-month increase in yield is due to favorable spring weather, which aided crop development. As shown in the satellite-derived Normalized Difference Vegetation Index (NDVI) image, vegetation vigor was much above average in the Steppe zone, which accounts for about 50 percent of Ukraine's winter wheat production. Widespread spring rainfall also helped crop development and improved crop conditions in the northern Forest-Steppe zone. Harvest of winter wheat is expected to begin on time in July.

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

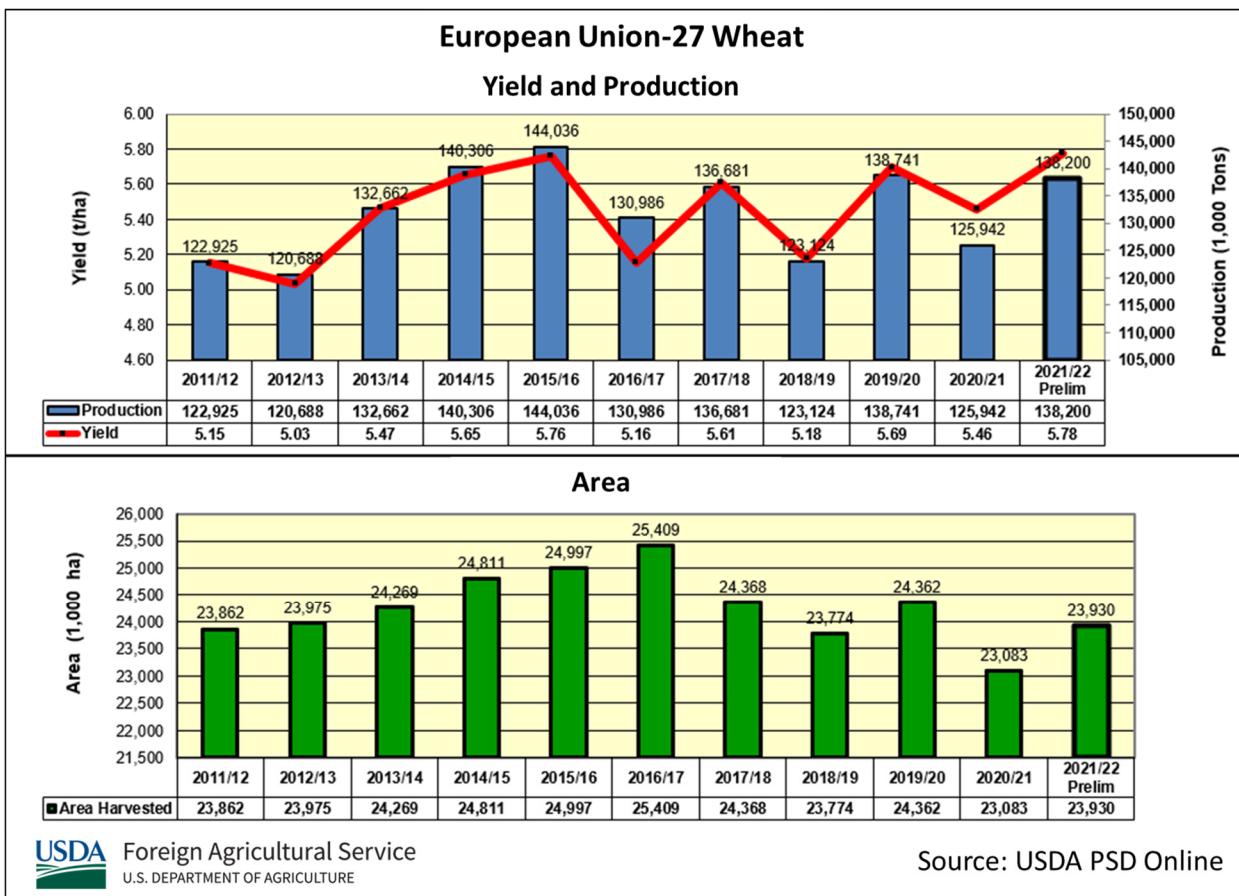

Source: USDA PSD Online

Planting of spring wheat is complete. June rain showers maintained above-average soil moisture and provided favorable conditions for crop establishment.

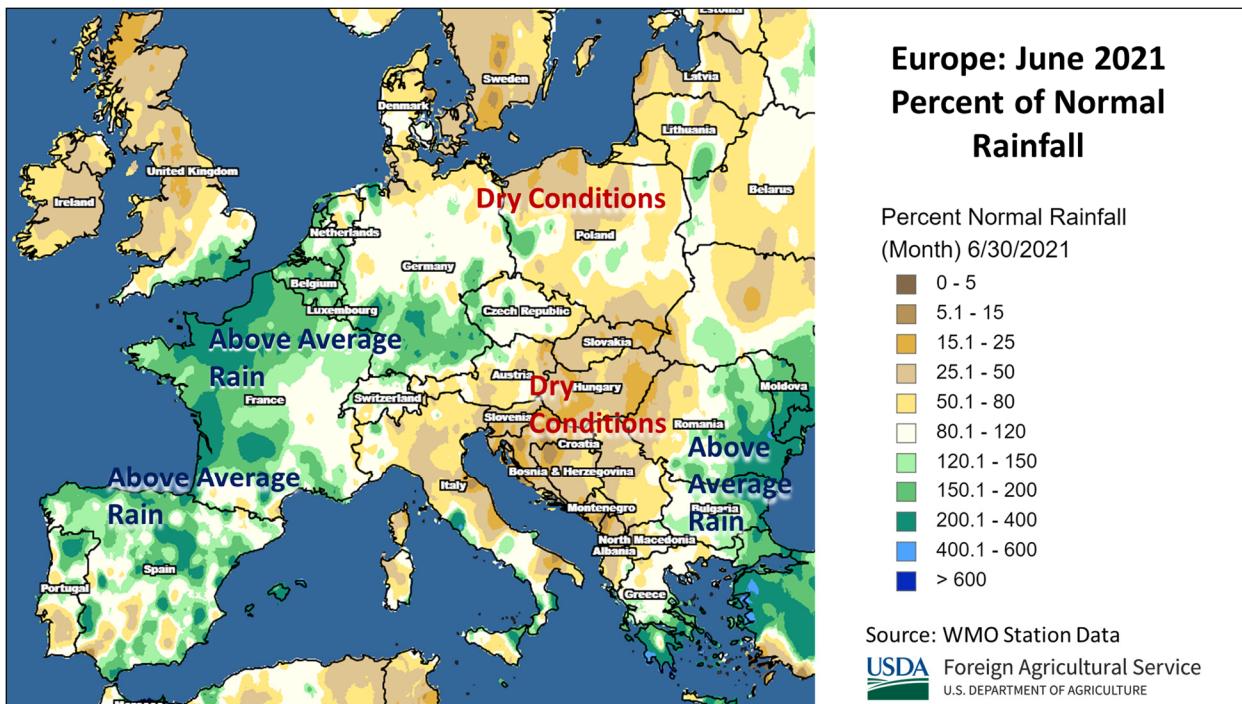

USDA crop production estimates for Ukraine include estimated output from Crimea. (*For more information, please contact [Iliana.Mladenova@usda.gov](mailto:Iliana.Mladenova@usda.gov).*)

### EU Wheat: Production Raised on Improved Weather

European Union-27 (EU) wheat production is estimated at 138.2 million metric tons (mmt), up 0.7 mmt from last month, 12.3 mmt from last year and 5 percent above the 5-year average. Harvested area is estimated at 23.9 million hectares (mha), up 80,000 ha from last month, and 0.8 mha or 4 percent higher than last year, but 1 percent below the 5-year average. Yield is estimated at 5.78 tons per hectare, up slightly from last month, 6 percent from last year, and 7 percent above the 5-year average.

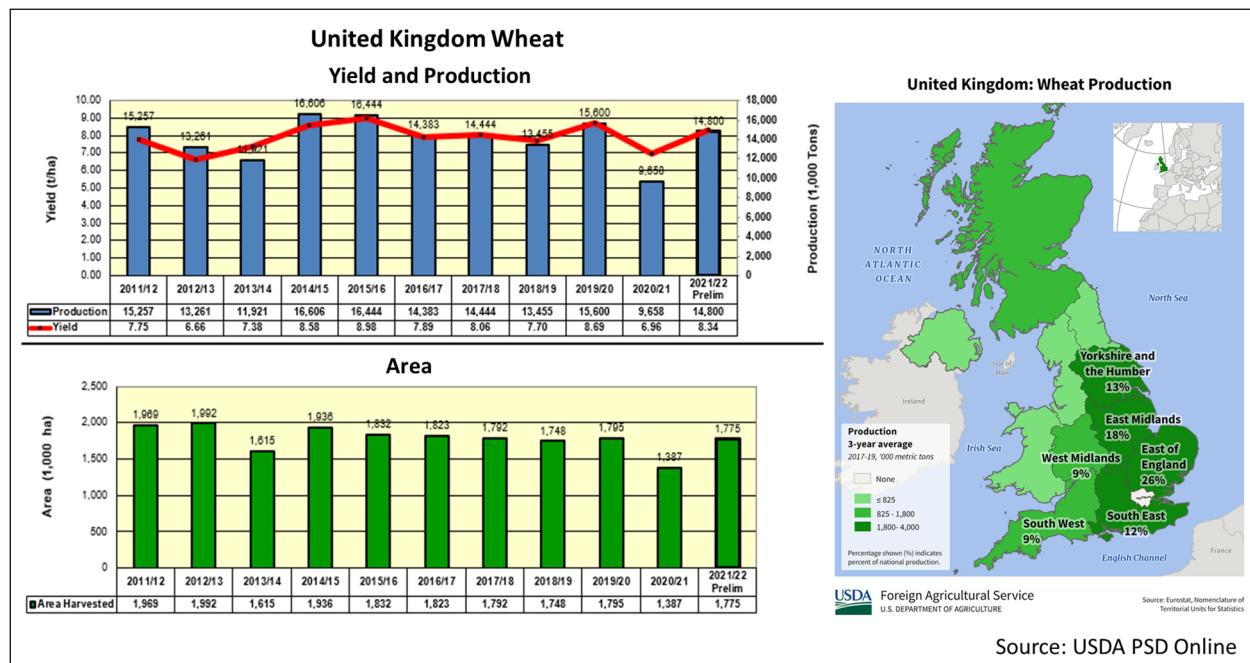

A cold, dry April, followed by a cooler-than-average May, delayed the wheat crop by one to two weeks. The above-average rainfall in May, however, erased growing concerns about dryness during April and early May in much of Europe. Satellite-derived Normalized Difference Vegetation Index (NDVI) depicts a jump in the vegetation vigor in wheat growing areas of Europe during June and into July. While increased temperatures have assisted with advancing crop maturation, harvest remains late in much of Europe, but should begin in earnest during early or mid-July. While dryness has been persistent in the Central European Plain (Hungary/western Romania/eastern Austria), observers continue to report high yields.

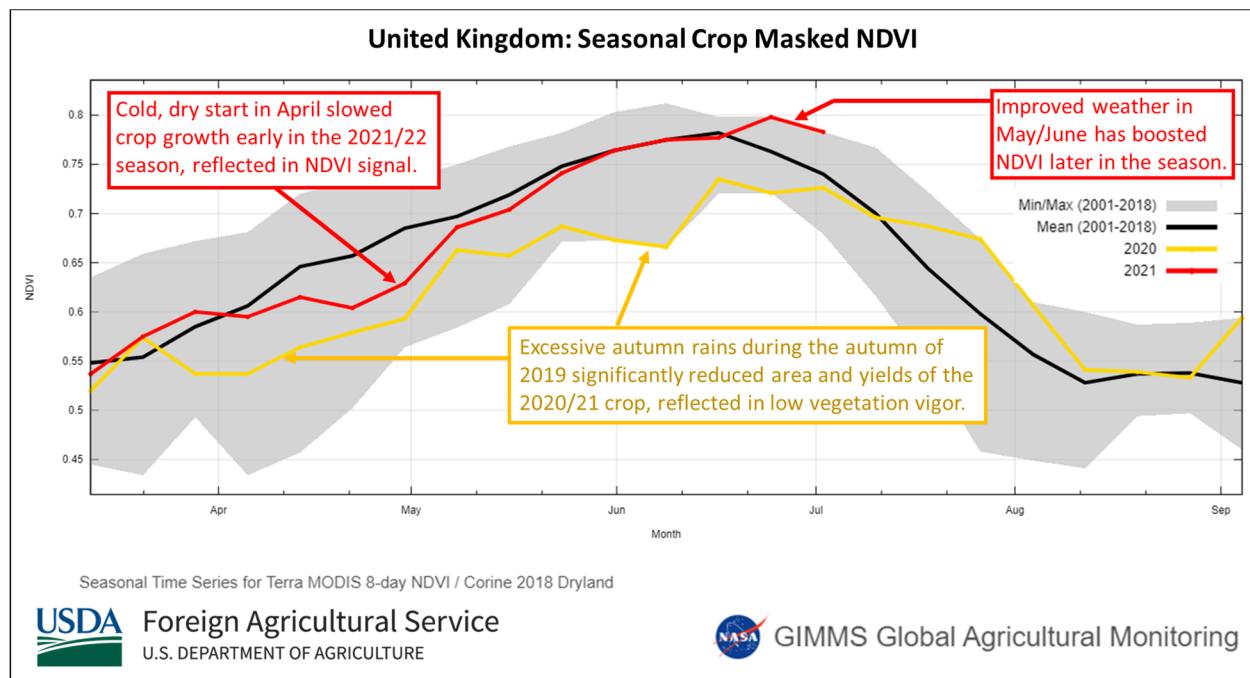

The largest EU changes this month include France – the EU’s largest wheat producer – with production estimated up 0.6 mmt to 38.1 mmt, of combined soft and durum wheat. Recent rains in France have created quality concerns and have further delayed the harvest. Romania, where much of the country continues to receive very favorable precipitation, particularly in its highest-productive southeastern region, is up 0.3 mmt to 9.5 mmt. Similarly, Bulgaria, has benefitted from above-average rainfall, with production estimated up 0.2 mmt to 6.1 mmt. Wheat in Poland is estimated down 0.3 mmt to 11.7 mmt due to dryness.

For country-specific area, yield, and production estimates within the European Union (EU), please go to PSD Online at <https://apps.fas.usda.gov/PSDOnline/app/index.html#/app/home>, and select “Downloadable Data Sets.” Select the zipped file for “EU Countries Area & Production.” (*For more information, please contact [Bryan.Purcell@usda.gov](mailto:Bryan.Purcell@usda.gov).*)

## United Kingdom Wheat: Production Rises from Beneficial Rain and Warmer Temperatures

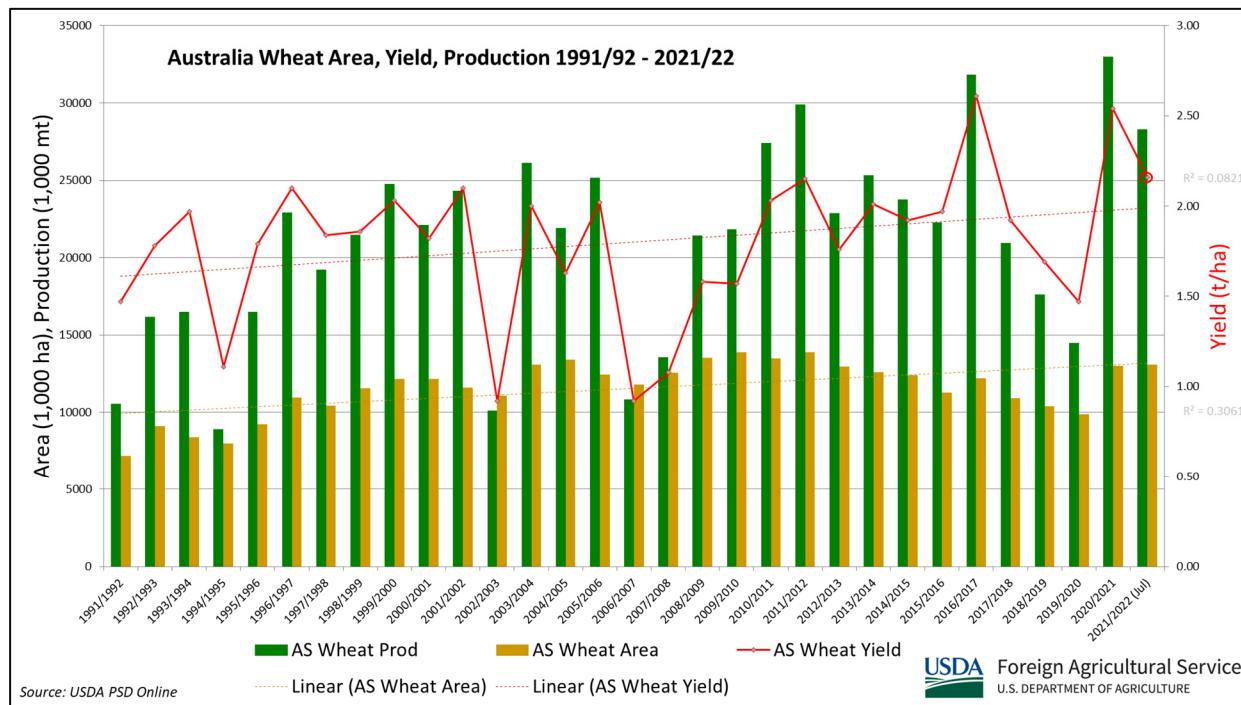

Wheat production in the United Kingdom (UK) is estimated at 14.8 million metric tons (mmt), up 0.7 mmt from last month, up 5.1 mmt from last year and 10 percent above the 5-year average. Area is estimated at 1.8 million hectares (mha), unchanged from last month, 28 percent higher than last year, and 4 percent above the 5-year average. Yield is estimated at 8.34 tons per hectare, up 5 percent from last month, up 20 percent from last year, and up 6 percent from the 5-year average. The previous season (marketing year 2020/2021) was particularly poor due to heavy rains at planting, which significantly lowered area and yield.

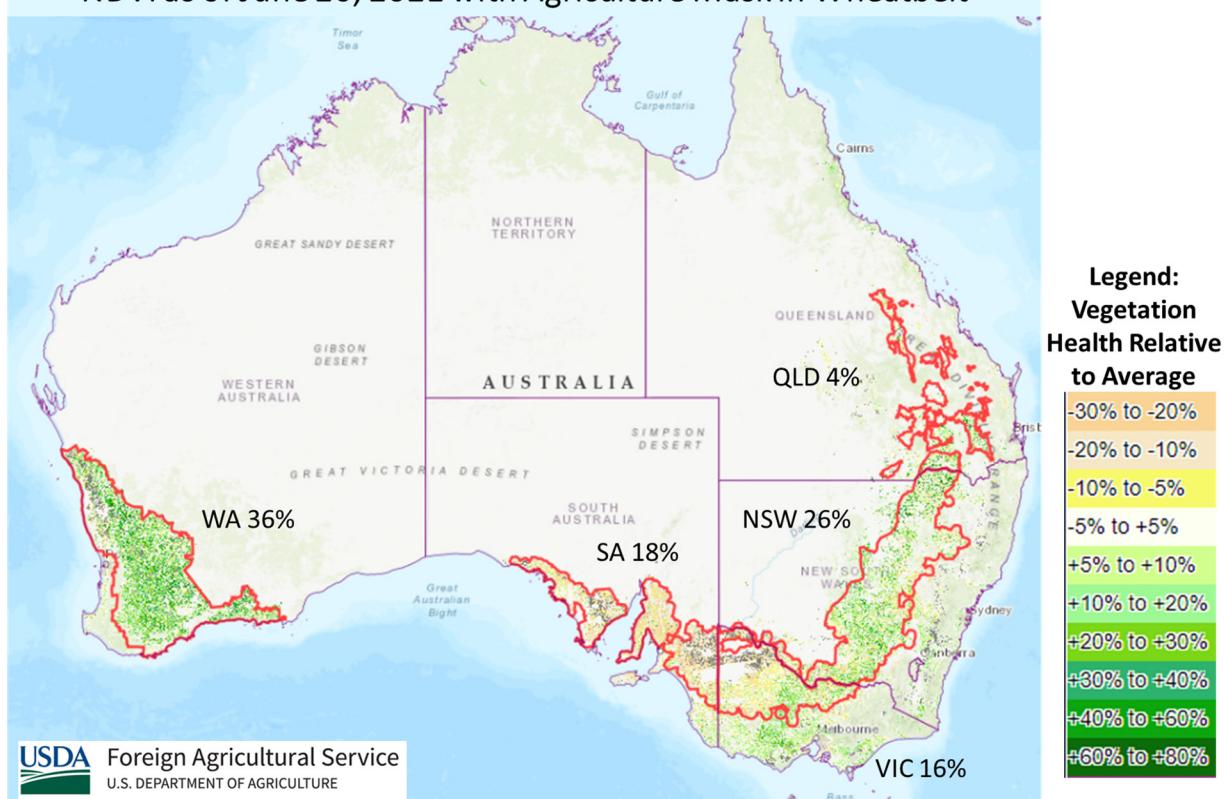

After a cool and dry April and early May had slowed wheat development, relief came in late May and June with above-average rainfall and higher temperatures. These conditions reduced the delay in development and facilitated crop improvement. Satellite-derived Normalized Difference Vegetation Index (NDVI) depicts a responding jump in the vegetation vigor and improved crop conditions in late June and July. (*For more information, please contact [Bryan.Purcell@usda.gov](mailto:Bryan.Purcell@usda.gov).*)

## Australia Wheat: Production Revised Higher

USDA forecasts Australia marketing year 2021/22 wheat production at 28.5 million metric tons (mmt), up 1.5 mmt or 6 percent from last month, but down 4.5 mmt or 14 percent from last year's record. Area is estimated at 13.1 million hectares (mha), down 0.1 mha from last month, but up 0.1 mha or 1 percent from last year. Yield is forecast at 2.18 tons per hectare (t/ha), up 6 percent from last month, but down 14 percent from last year.

## NDVI as of June 26, 2021 with Agriculture Mask in Wheatbelt

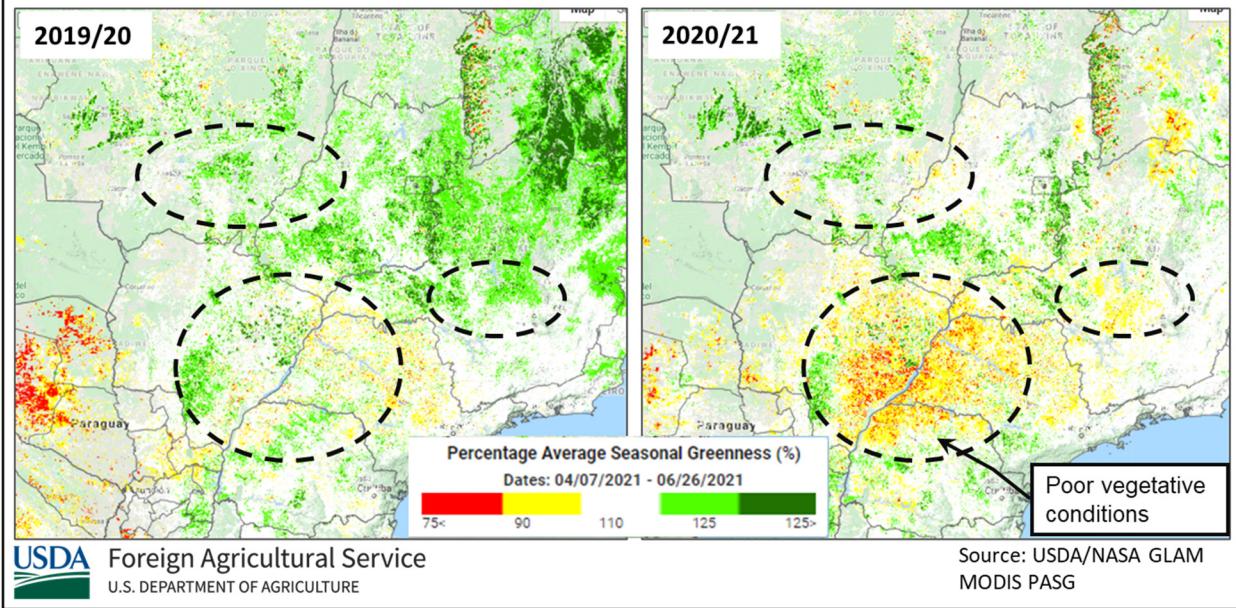

The area revision is largely based on the latest information from the Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES). Yield potential remains above-average particularly in the two largest producing states of Western Australia (36 percent) and New South Wales (26 percent). Abundant precipitation prior to sowing and again in June benefited emergence and crop establishment. Recent satellite-derived Normalized Difference Vegetation Index (NDVI) depicts strong crop vigor, especially in the wheat belt of New South Wales and Western Australia. (*For more information, please contact [James.Crutchfield@usda.gov](mailto:James.Crutchfield@usda.gov).*)

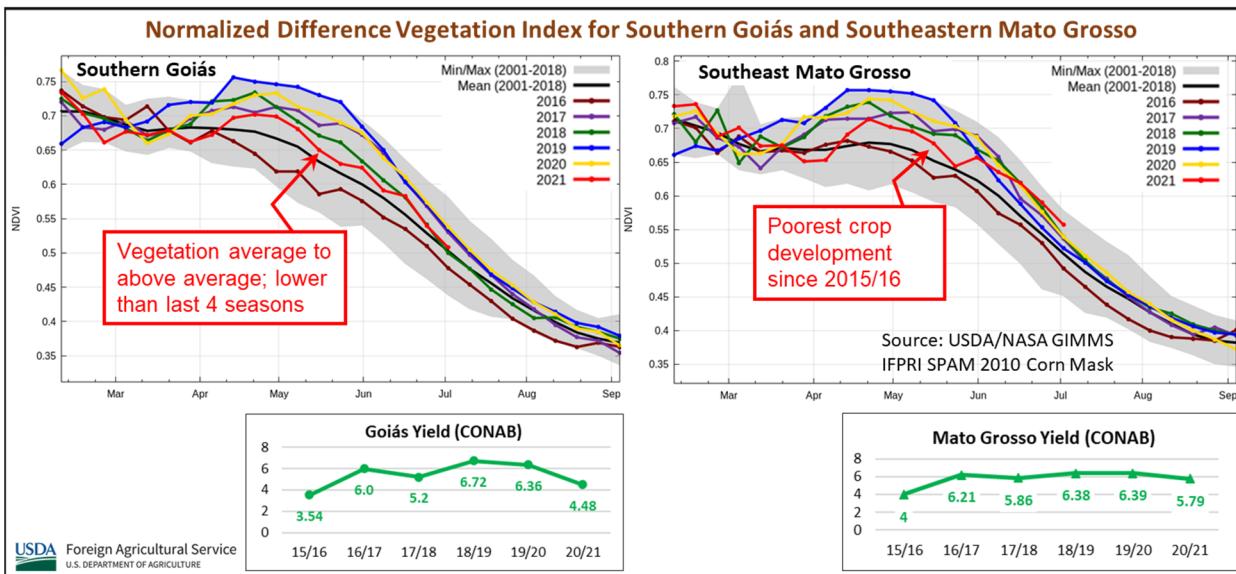

### Brazil Corn: Drought Results in Further Cuts to Production for MY2020/21 Crop

USDA estimates total corn production for marketing year (MY) 2020/21 in Brazil at 93.0 million metric tons (mmt), lower by 6 percent from last month, and lower by 9 percent from the previous year's record crop. Total harvested area, for all three corn crops, is estimated at a record 19.9 million hectares (mha), unchanged from last month, and up 1.4 mha (7 percent) from the previous year's record area of 18.5 mha. Yield is estimated at 4.68 tons per hectare (t/ha), about 6 percent lower than last month and 15 percent below last year's crop. This yield is 10 percent lower than the 5-year average of 5.20 t/ha because of dry weather during most of the second crop corn season.

## Brazil Corn: Percent of Average Seasonal Greenness (PASG) April 1 – June 30, 2021

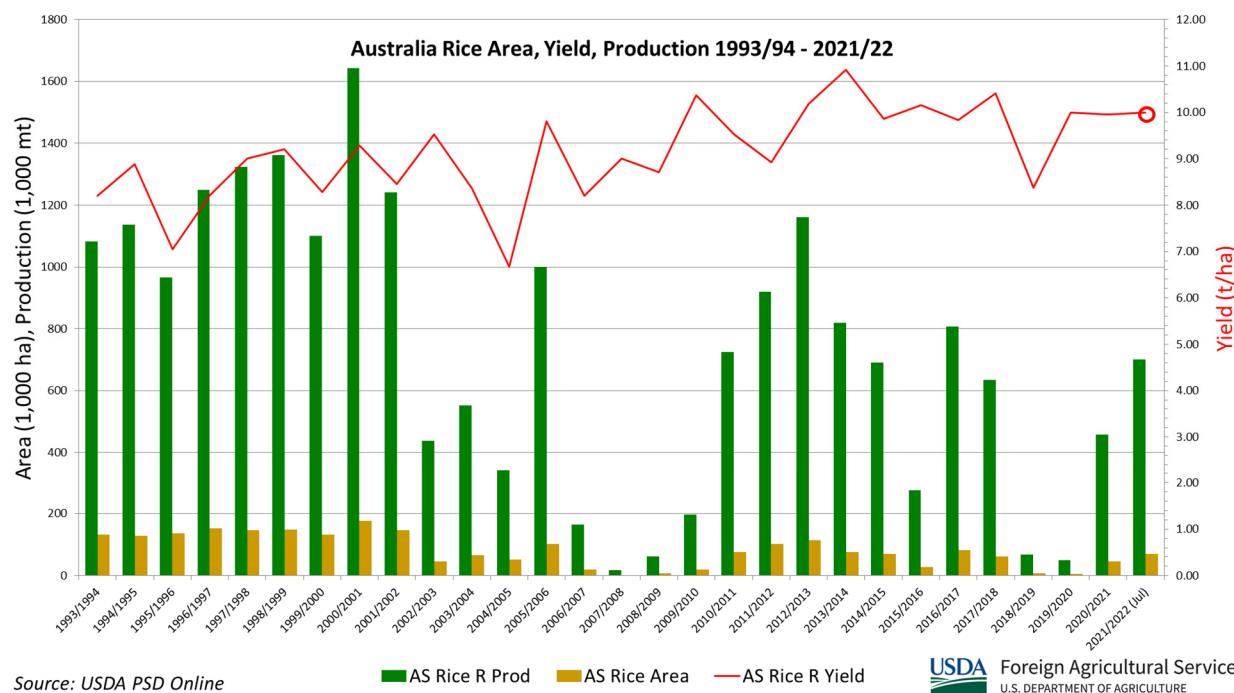

Harvest is almost complete for the first-season corn at 95 percent with a small portion remaining in the northeastern states. Production for this crop is estimated at 24.9 mmt on an area of 4.4 mha by *Companhia Nacional de Abastecimento* (CONAB, an agency in the Brazilian Ministry of Agriculture), lower by less than 1 mmt from last year's first-season output, with yield down 6 percent at 5.69 t/ha.

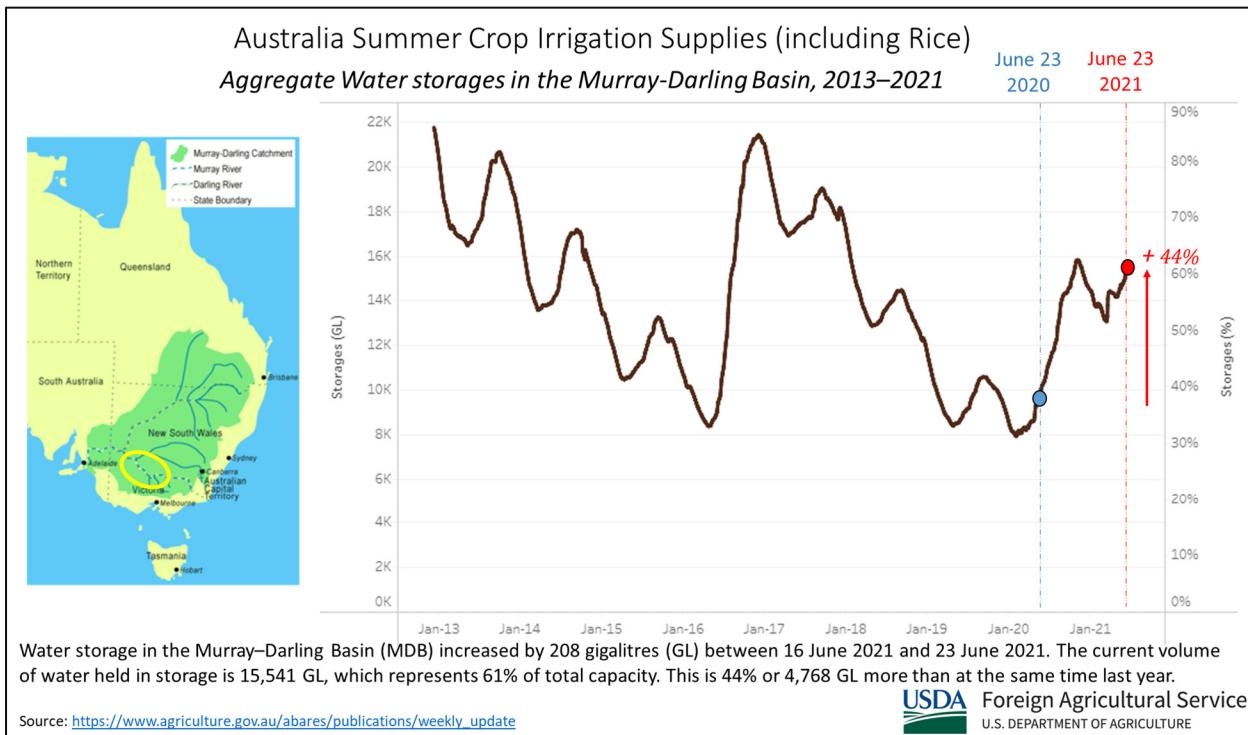

The lack of rainfall continued in the major *safrinha* corn growing areas during the month of June, exacerbating crop stress and reducing yield prospects. The lack of moisture occurred during sensitive growth stages when moisture is needed for kernel development. Comparison of the satellite-derived Percent of Average Seasonal Greenness (PASG) for the three-month period from April to June for the MY 2020/21 season and the MY 2019/20 season, displays lower crop vigor

this season for large parts of Paraná, Mato Grosso do Sul, Minas Gerais, and São Paulo (36 percent of *safrinha* production). The southern Goiás and southeastern Mato Grosso regions also exhibit the lowest vegetation biomass of the past five years, as indicated by the satellite-derived normalized vegetation index (NDVI). Harvest commenced for the *safrinha* crop with about 15 percent harvested thus far. (For more information, please contact [Sunita.Yadav-Pauletti@usda.gov](mailto:Sunita.Yadav-Pauletti@usda.gov).)

## Australia Rice: Substantial Production Increase Over Last Season

Australia rice production for marketing year 2021/22 is forecast at 800,000 metric tons (mt) on a paddy basis, up 100,000 mt (14 percent) from last month and up 342,000 mt or 75 percent from last season. Area is forecast at 80,000 hectares (ha), up 10,000 ha from last month and up 34,000 ha from last season. Yield is forecast at 10.00 metric tons per hectare, similar to last year, and 3 percent above the 5-year average.

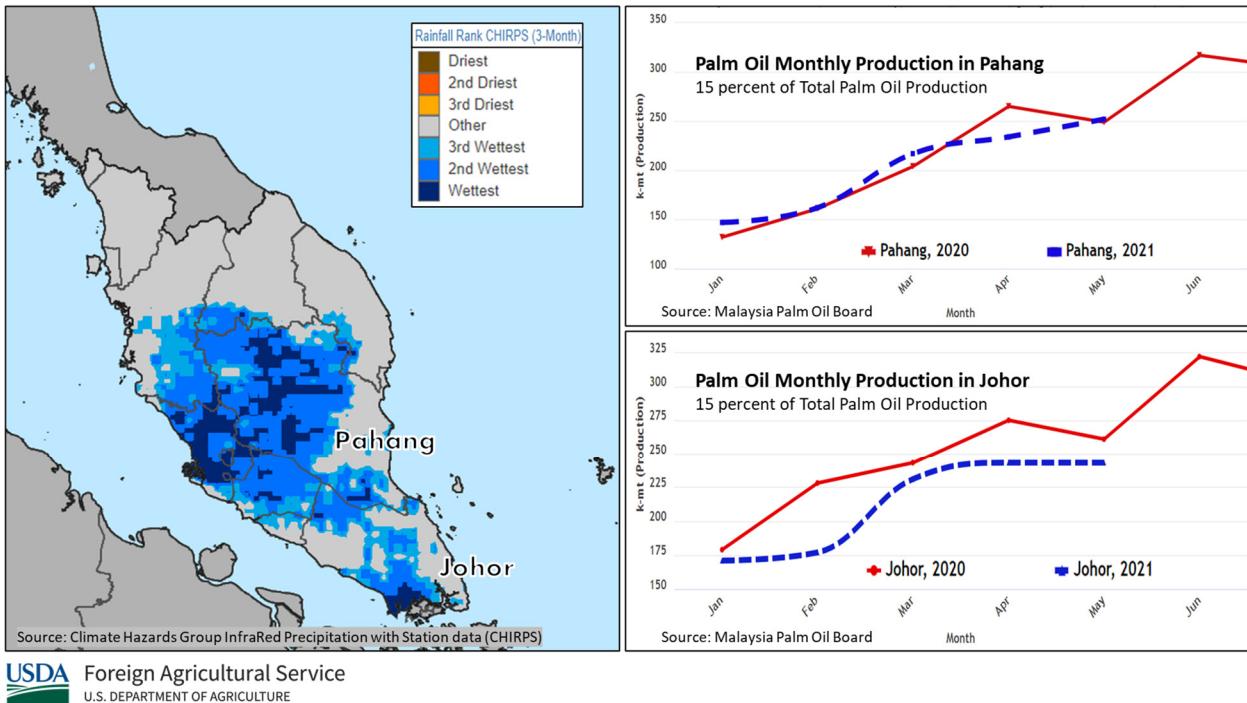

Rice is sown from October to December and harvested from March to May. Precipitation thus far has been average to above average during the past 6 months in the main rice-producing area and river catchments of southern New South Wales, resulting in reservoir recharge. Area planted to rice will expand because of increased water allocations, increased availability of irrigation water, and higher returns relative to cotton. Australian farmers are benefiting from increased medium grain rice prices due to the drought in California. (*For more information, please contact James.Crutchfield@usda.gov.*)

### Malaysia Palm Oil: Downward Trend Continues for MY 2020/21 Production

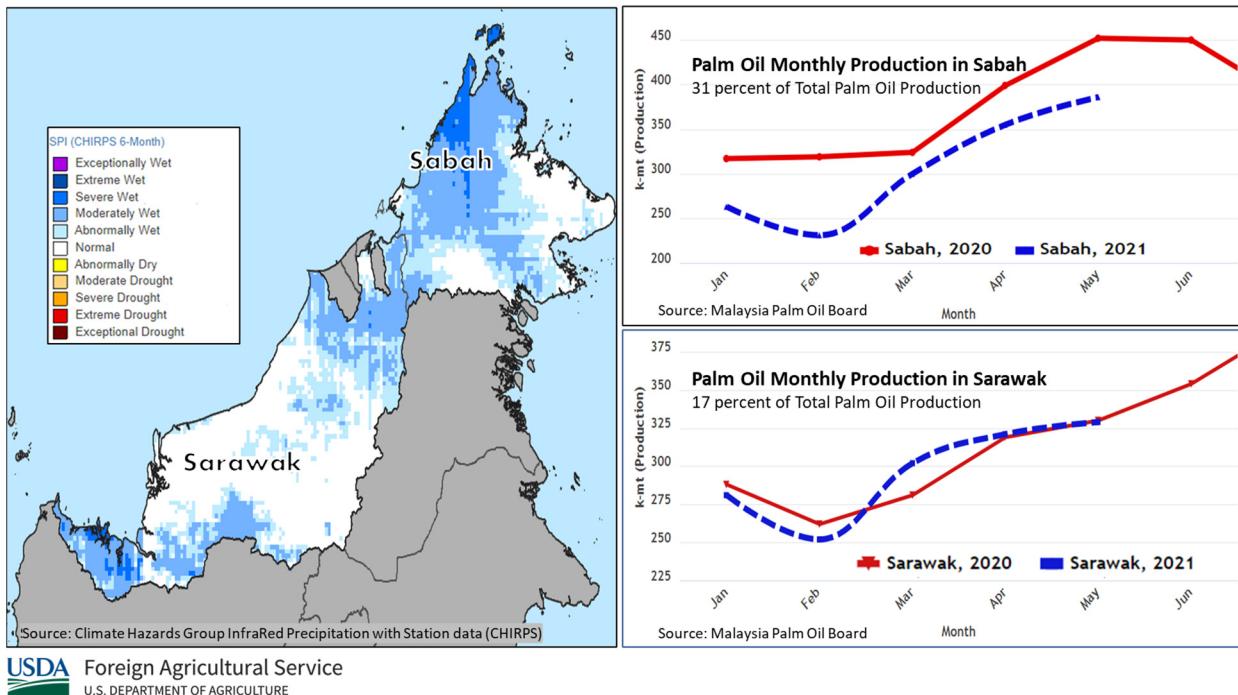

USDA estimates Malaysia marketing year (MY) 2020/21 palm oil production at 18.2 million metric tons, down 2 percent from last month and 6 percent from MY 2019/20. The estimated output would be the lowest since 2015 and on par with the MY 2011/12 production estimate. Harvested area is estimated at 5.4 million hectares, unchanged from last month, but up 1 percent from last year. Yield is estimated at 3.37 tons per hectare, down 2 percent from last month, and 6 percent from last year. The current yield estimate would mark the lowest since MY 1997/98.

## Record Rainfall (Apr 01 – Jun 30) Impacting Palm Oil Monthly Production (2020 vs 2021)

Malaysia's MY 2020/21 palm oil season has been adversely affected by well-above-average rainfall. As a result, a downward trend in estimated palm oil production continues. Since January, observed rainfall has reached record amounts in Peninsular Malaysia and has persistently been well-above average in Eastern Malaysia. These extreme rainfall occurrences have resulted in ongoing localized harvest disruptions in the main oil palm states and have led to significant monthly Crude Palm Oil (CPO) output lows, most notably in Johor, Pahang, Sabah and Sarawak. According to the Malaysia Palm Oil Board, the latest Malaysia CPO data released for the month of May was estimated 5 percent down from the MY 2019/20 season and slightly down from the 5-year average. May's CPO output changed for the main palm oil states of Johor (down 7 percent), Pahang (up 1 percent), Sabah (down 15 percent) and Sarawak (down less than 1 percent) as compared to the MY 2019/20 season. Local reports indicate persistent rainfall stemming from La Niña has negatively impacted the CPO monthly output and yields as workers ability to harvest oil palm has been limited. Additionally, there have been ongoing labor shortages due in part to the COVID-19 pandemic as the Malaysian government closed borders and froze hiring foreign workers. Foreign workers make up more than 75 percent of Malaysia's palm oil workforce.

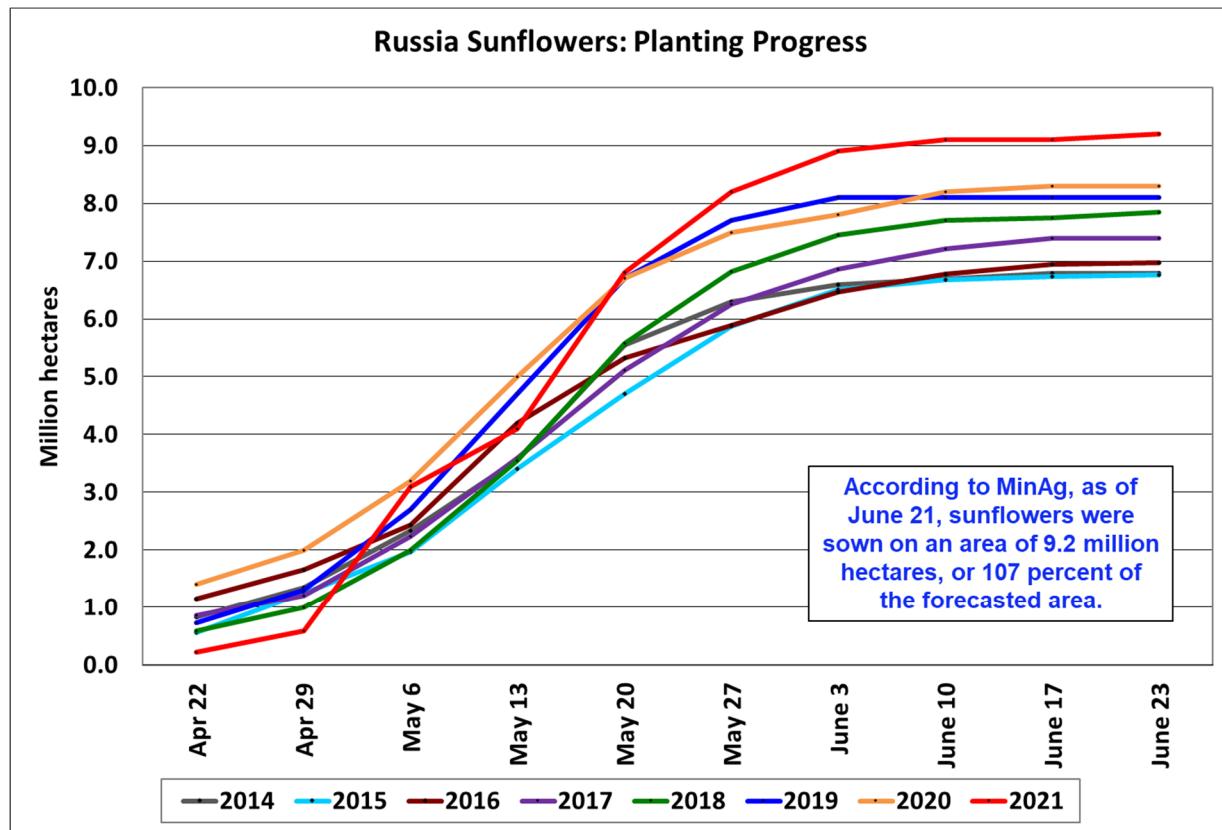

## Above Average Rainfall (Jan 01 – Jun 30) Impacting Palm Oil Monthly Production (2020 vs 2021)

Overall, Malaysia's (October to May) CPO output is down 4 percent from 2019/20, and down 5 percent from the 5-year average. USDA's market year for Malaysia palm oil is October through September. (*For more information, please contact [Justin.Jenkins@usda.gov](mailto:Justin.Jenkins@usda.gov).*)

## Russia Sunflowerseed: Record Planted Area and Production

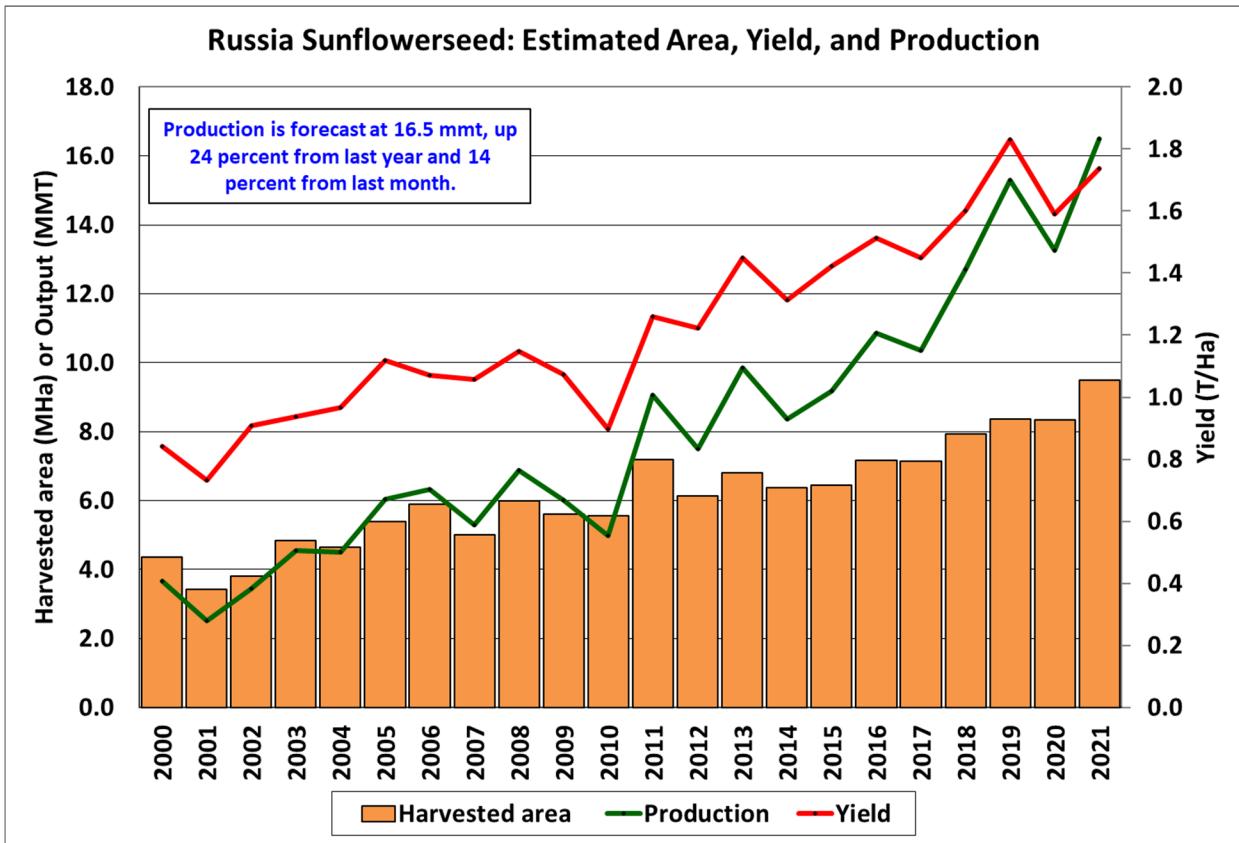

Russia sunflowerseed production for marketing year 2021/22 is forecast at a record 16.5 million metric tons (mmt), up 24 percent from last year and 14 percent from last month. Yield is forecast at 1.74 tons per hectare, up 9 percent from last year and 2 percent from last month. Total area is estimated at a record 9.5 million hectares (mha), up 14 percent from last year and 12 percent from last month.

Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

**Source: Ministry of Agriculture (MinAg)**

Sunflowers are grown in three main Districts – Central, Southern and Volga – accounting for 26, 28, and 35 percent of production, respectively. The month-to-month increase in area is based on data published by the Russian Ministry of Agriculture (MinAg), which indicate an increase in spring crops, including sunflowerseed. As of June 21, sunflowers were planted at 107 percent of forecasted area. The increase in spring-planted crops was due to the loss of winter planted crops caused by ice crusting. ROSSTAT, Russia's statistical agency announced that as of June 1 the total area of damaged winter crops was estimated at 1.0 mha or 14.2 percent of sown area. Some of this area was planted with spring crops. Sunflowers have marked a steady increase in area and yield owing to the high profitability for this crop and the wider use of hybrid seed varieties since 2010.

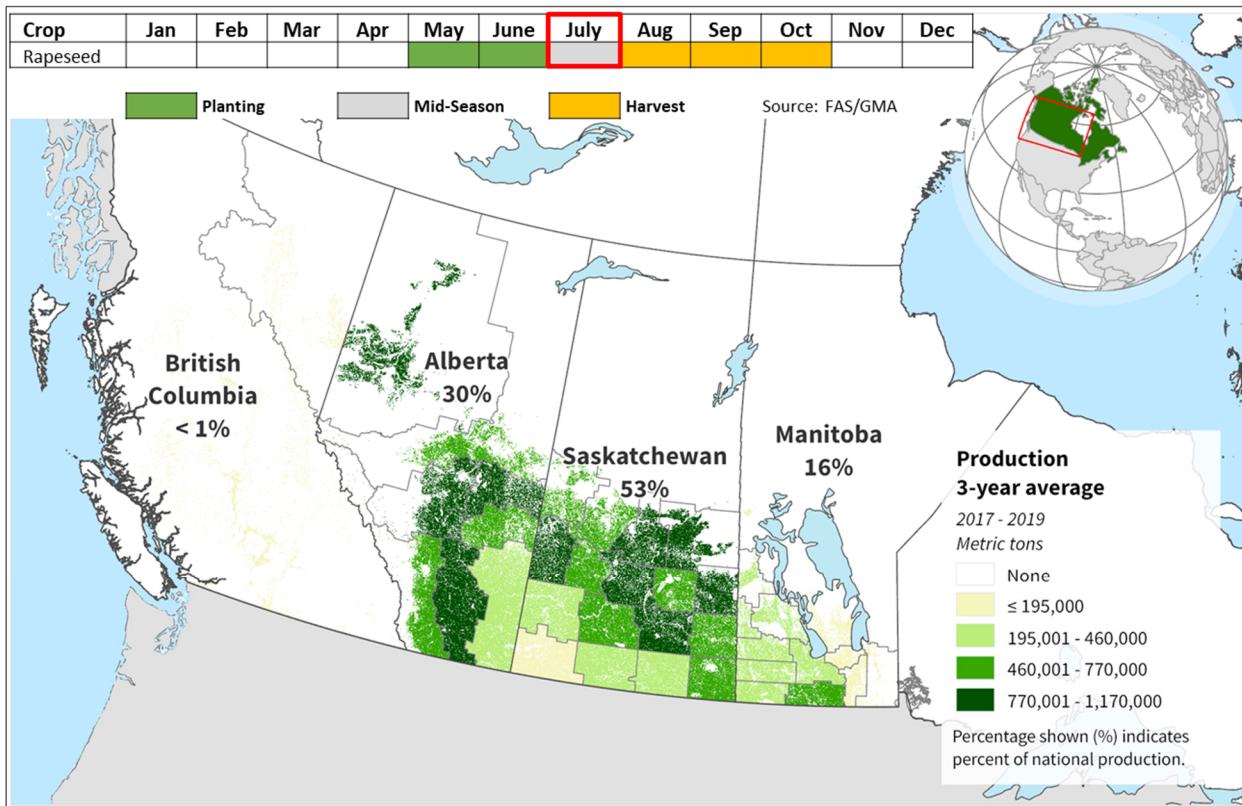

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Sources: USDA PSD Online (2007-2020); FAS estimates (2021)

USDA crop production estimates for Russia exclude estimated output from Crimea. (For more information, please contact [Iliana.Mladenova@usda.gov](mailto:Iliana.Mladenova@usda.gov).)

## Canada Rapeseed: Area Estimate Revised Upward; Production Forecast Down

### Canada: Rapeseed Production

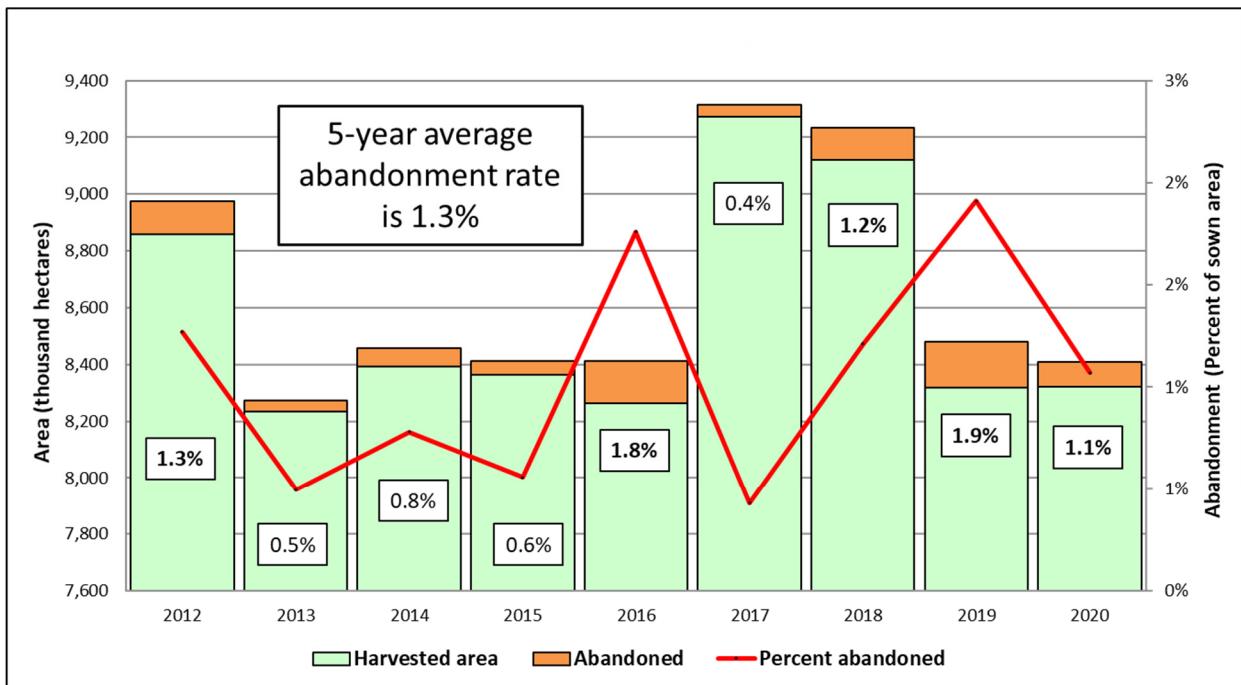

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Sources: Statistics Canada, Estimated Production by Small Area Data (SAD) Region; AAFC, Annual Crop Inventory 2018

USDA forecasts Canada rapeseed production for marketing year (MY) 2021/22 at 20.2 million metric tons (mmt), down 0.3 mmt or 1 percent from last month, but up 1.2 mmt or 6 percent from last year, and 1 percent above the 5-year average. Harvested area is estimated at 9.0 million hectares (mha), up 2 percent from last month, 8 percent above last year, and 4 percent above the 5-year average. Yield is forecast at 2.24 metric tons per hectare (t/ha), down 3 percent from last month and 3 percent below the 5-year average.

## Annual Rapeseed Abandonment

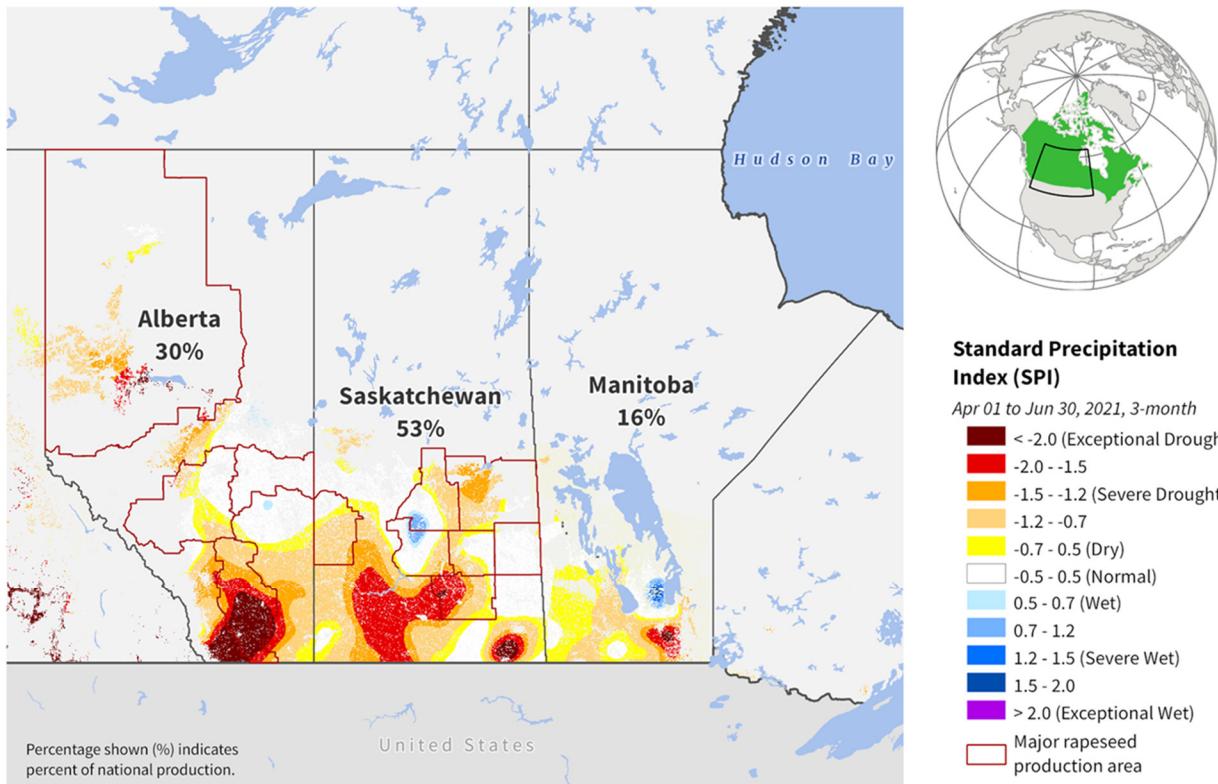

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Source: Statistics Canada

Statistics Canada recently released planted area estimates from their annual June Field Crop Survey, indicating an 8 percent increase over MY 2020/21 in planted area for rapeseed, as farmers responded to higher prices driven by high demand and low stocks. Among other factors, when estimating harvested area this early in the season, USDA considers that roughly 1.3 percent, on average, of the reported area planted will not be harvested. Production forecasts also consider yield potential at this point in the season, which USDA has tempered given the difficult early-season conditions in Canada's major rapeseed growing areas.

## Canadian Prairies: Drought

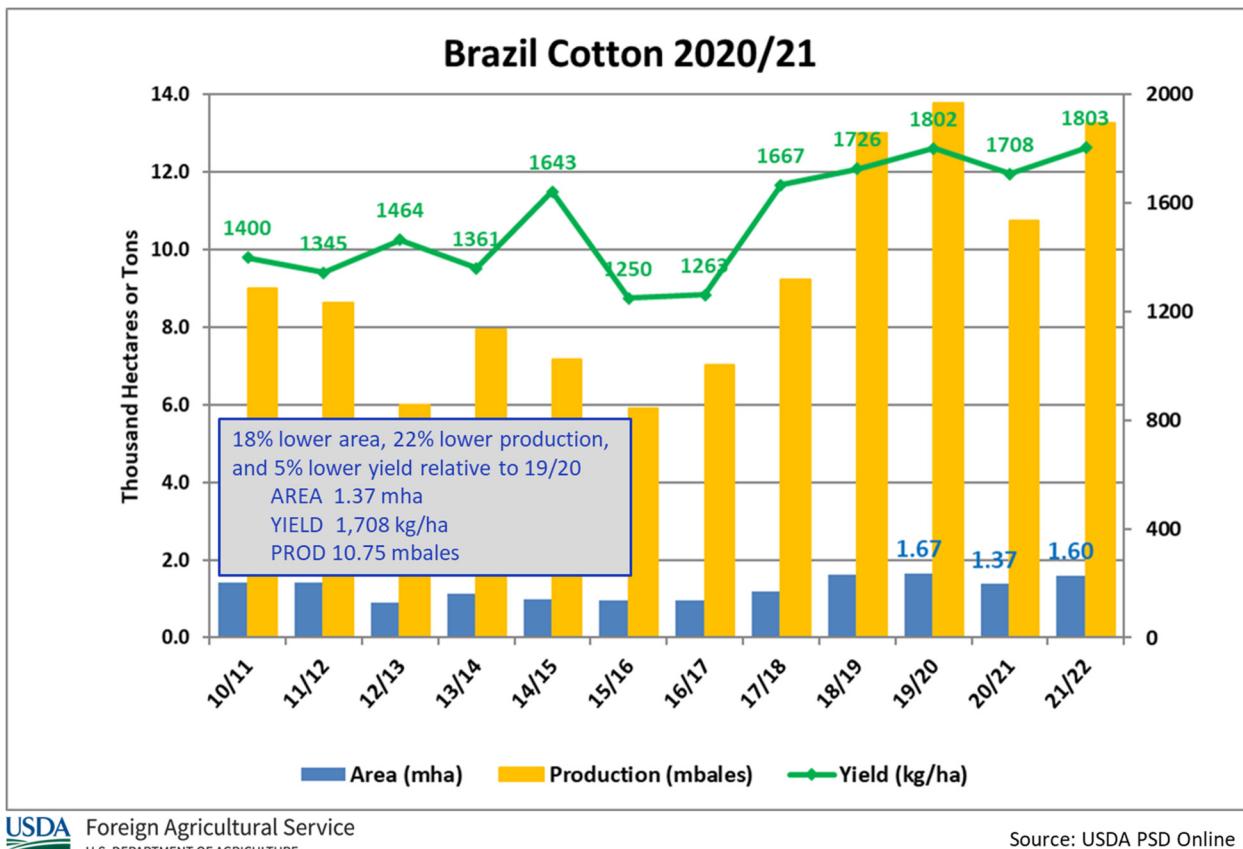

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Sources: NOAA CPC, 3-Month Standard Precipitation Index (SPI); Statistics Canada, Estimated Production by Small Area Data (SAD) Region; AAFC, Annual Crop Inventory 2018

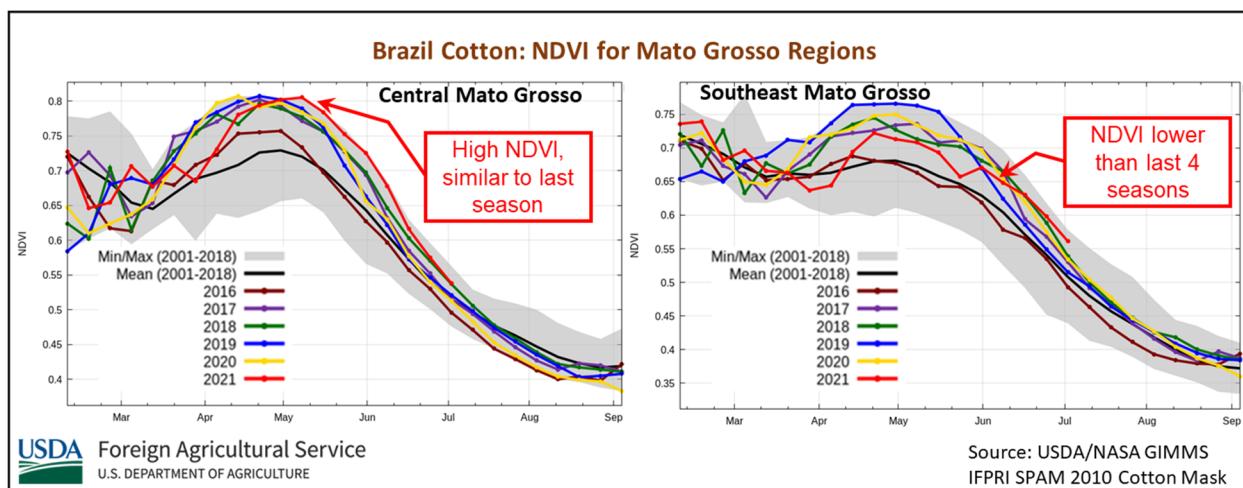

Rapeseed is primarily grown in Saskatchewan and Alberta, which have experienced a challenging start to the growing season, with high temperatures and drier-than-normal conditions. The ongoing Prairie drought is affecting key growing areas, including those in southern Alberta and parts of the Peace River Valley, which are experiencing the worst dryness relative to normal since April 1. Provincial reporting indicates signs of moisture stress throughout the region, highlighting uneven development in many areas, and a rapidly maturing crop, some of which is attributable to the rapid pace of planting as the season began. Going forward, July precipitation will be a crucial determinant of yield potential for the MY 2021/22 crop. (*For more information, please contact [Aaron.Mulhollen@usda.gov](mailto:Aaron.Mulhollen@usda.gov).*)

## Brazil Cotton: MY 2020/21 Production Revised Down on Lower Yield Prospects

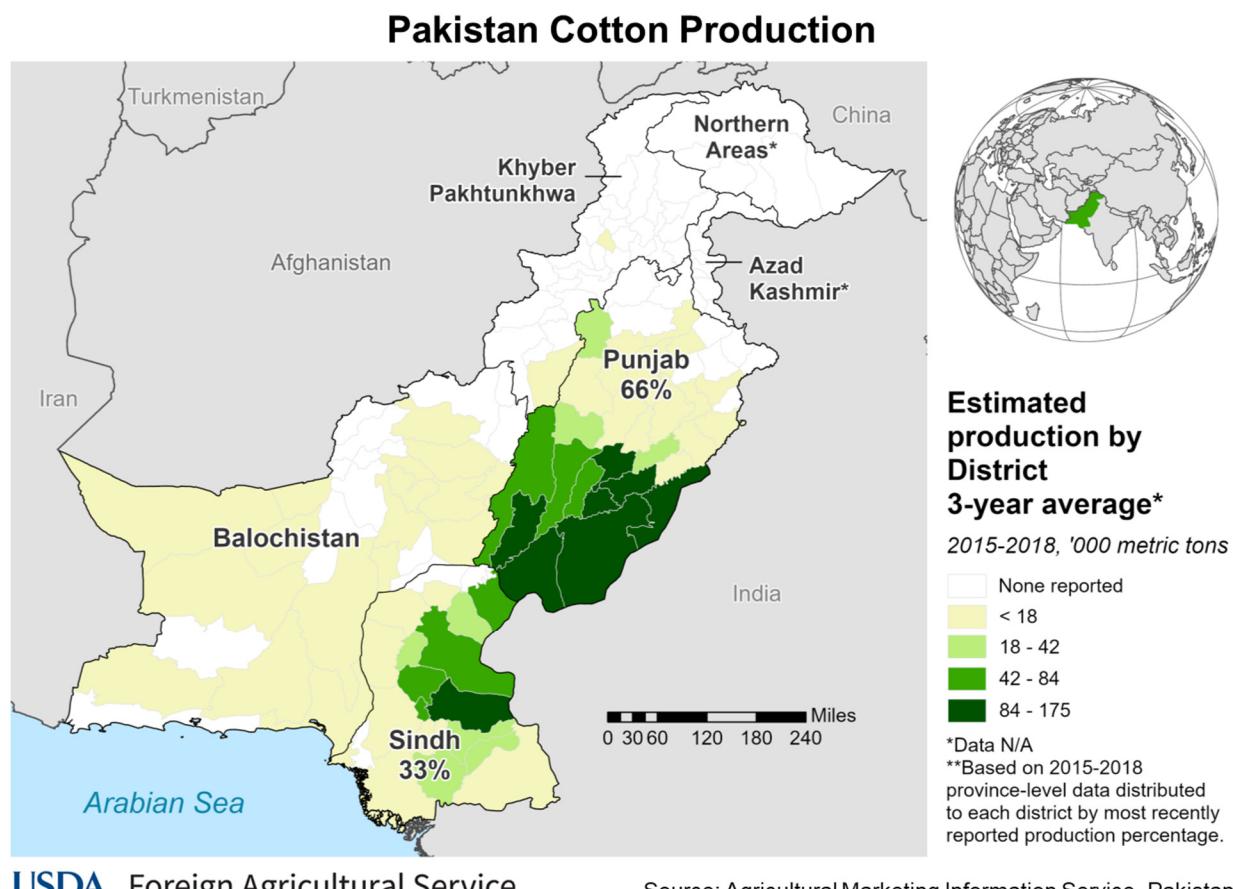

USDA Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Brazil's marketing year (MY) 2020/21 cotton production is estimated at 10.8 million 480-pound bales, lower by 0.5 million bales (4 percent) from last month, and down 3.1 million bales (22 percent) from the 2019/20 record production. Harvested cotton area is estimated at 1.4 million hectares (mha), lower by 0.03 mha (2 percent) from last month, and 18 percent below last season. Cotton yield is estimated at 1,708 kilograms per hectare (kg/ha), 4 percent above the 5-year average of 1,642 kg/ha.

In Mato Grosso (69 percent of production), dryness has persisted from April through June. This has negatively impacted the cotton crop, particularly when moisture was needed at reproductive stages. Regional differences in the satellite-derived Normalized Difference Vegetation Index (NDVI) indicate lower vegetation vigor in the southeastern region versus the central and northern regions of Mato Grosso. Harvest started in both Mato Grosso and Bahia (accounting for 20 percent of national production). Currently, about 7 percent of the crop is harvested, and harvest will continue through September. (For more information, please contact [Sunita.Yadav-Pauletti@usda.gov](mailto:Sunita.Yadav-Pauletti@usda.gov).)

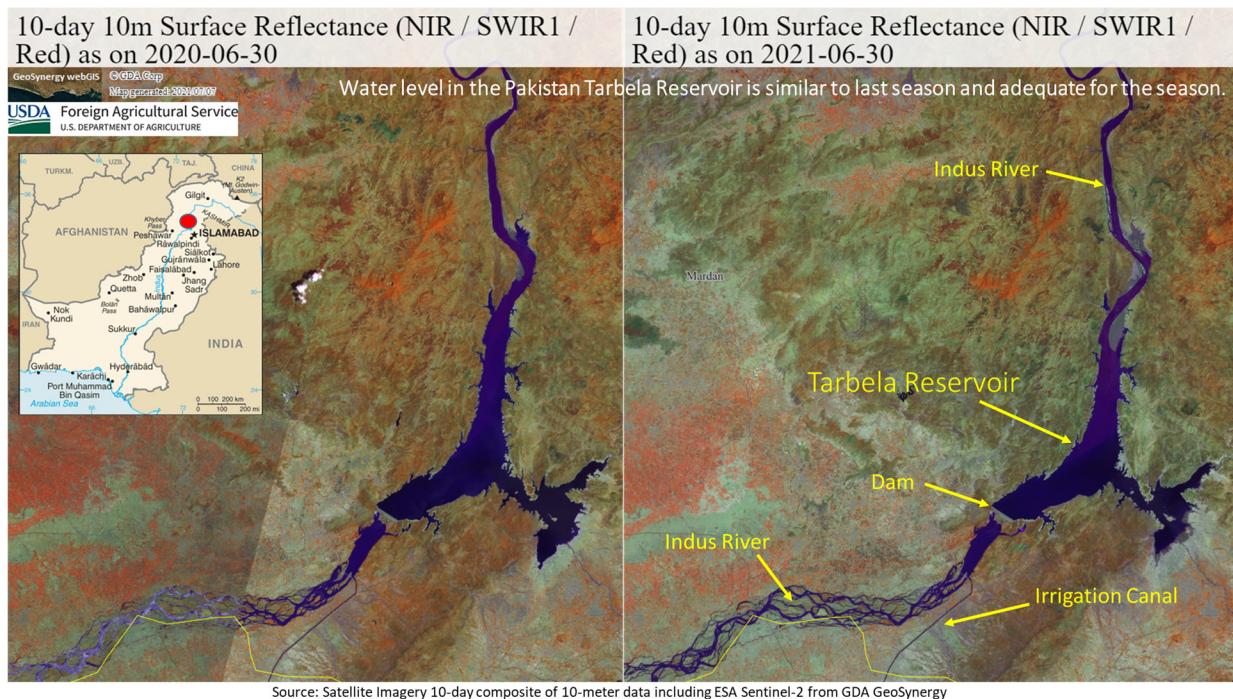

## Pakistan Cotton: Production Revised Down Based on Lower Area

**USDA Foreign Agricultural Service**  
U.S. DEPARTMENT OF AGRICULTURE

Source: Agricultural Marketing Information Service, Pakistan;  
Khyber Pakhtunkhwa (K.P.) Bureau of Statistics

USDA forecasts Pakistan cotton production at 5.0 million 480-pound bales, down 0.3 million bales (6 percent) from last month, but up 0.5 million bales (11 percent) from last year. Area is estimated at 2.0 million hectares, down 0.1 million from last month, and down 0.2 million hectares (9 percent) from last year. Production is revised down based on estimated lower sown area. The yield is forecast at 544 kilograms per hectare, this is 11 percent below the five-year average of 610 kilograms per hectare.

Cotton is typically sown from April to June. Pakistan's Central Cotton Committee (PCCC) has established an area target of 2.25 million hectares for the marketing year 2021/22 season. As of July 6<sup>th</sup>, the PCCC estimated that 1.81 million hectares had been sown. USDA anticipates that sowing will only reach 91 percent of the official target for the season. This will result in a final area of 2.0 million hectares. Growers have sown more corn and sugarcane this season and reduced cotton acreage. Corn and sugarcane producers benefit from tariffs that insulate domestic prices from the international market, while cotton producers face lower prices and competition from imported cotton. Cotton is grown under irrigated conditions with the Tarbela Reservoir providing the vast majority of the irrigation water. As of late June, the water level in the Tarbela is favorable and similar to last season. Approximately 75 percent of Pakistan's total cotton crop is produced in Punjab and the remaining 25 percent is in Sindh. Harvest occurs from August through November, with peak harvest typically occurring in October. (*For more information, please contact [James.Crutchfield@usda.gov](mailto:James.Crutchfield@usda.gov).*)

The Foreign Agricultural Service (FAS) updates its production, supply and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.

### FAS Reports and Databases:

#### **World Agricultural Production**

Current: <https://www.fas.usda.gov/data/world-agricultural-production>

Archive: <https://usda.library.cornell.edu/concern/publications/5q47rn72z?locale=en>

USDA's Foreign Agricultural Service (FAS) publishes a monthly report on crop acreage, yield and production in major countries worldwide. Sources include reporting from FAS's worldwide offices, official statistics of foreign governments, and analysis of economic data and satellite imagery. The reports reflect official USDA estimates released in the monthly *World Agricultural Supply and Demand Estimates* (WASDE).

#### **World Markets and Trade**

Current: <https://www.fas.usda.gov/data>

Archive:

[https://usda.library.cornell.edu/catalog?%5Bmember\\_of\\_collections\\_ssim%5D%5B%5D=Foreign+Agricultural+Service&locale=en](https://usda.library.cornell.edu/catalog?%5Bmember_of_collections_ssim%5D%5B%5D=Foreign+Agricultural+Service&locale=en)

USDA's Foreign Agricultural Service (FAS) publishes monthly and quarterly reports which include data on U.S. and global trade, production, consumption and stocks, as well as analysis of developments affecting world trade in oilseeds, grains, cotton, livestock and poultry. The reports reflect official USDA estimates released in the monthly *World Agricultural Supply and Demand Estimates* (WASDE).

#### **Global Agricultural Information Network (GAIN)**

<https://www.fas.usda.gov/databases/global-agricultural-information-network-gain>

USDA's Foreign Agricultural Service (FAS) provides timely reports on foreign markets through the Global Agriculture Information Network (GAIN) database. An average of 2,000 reports are added each year, with reports going back to 1995. GAIN reports are compiled by FAS' global market intelligence network, which includes FAS foreign service officers and locally engaged staff in over 90 overseas offices world-wide. They provide on-the-ground intelligence, insight, and analysis on nearly 200 countries, delivering information on foreign agricultural markets, crop conditions, and agro-political dynamics of interest to U.S. agriculture. GAIN reports contain assessments of commodity and trade issues made by USDA staff and are not necessarily statements of official U.S. government policy.

#### **Production, Supply and Distribution (PS&D) Online**

<https://apps.fas.usda.gov/psdonline/app/index.html#/app/home>

PSD Online is the public repository for USDA's Official Production, Supply and Distribution forecast data and reports for key agricultural commodities. PSD Online data are reviewed and updated monthly by an interagency committee chaired by USDA's World Agricultural Outlook Board (WAOB). The committee consist of representatives from Foreign Agricultural Service (FAS), the Economic Research Service (ERS), the Farm Service Agency (FSA), and the Agricultural Marketing Service (AMS).

#### **EU Countries and Russia Wheat: Area and Production Estimates**

<https://apps.fas.usda.gov/psdonline/app/index.html#/app/downloads> (click on PSD Datasets)

USDA's Foreign Agricultural Service (FAS) provides country-level area and production estimates for the nations of the European Union. For Russia, country-level area and production estimates are provided for Winter and Spring wheat. These datasets are reviewed and updated monthly by an interagency committee chaired by USDA's World Agricultural Outlook Board (WAOB) and can be downloaded through PSD datasets on PSD Online.

## FAS Reports and Databases:

### International Production Assessment (IPAD)

<https://ipad.fas.usda.gov/>

USDA's Foreign Agricultural Service (FAS) maintains a dynamic global crop production portal with key information including *World Agricultural Production* (WAP) briefs, Commodity Intelligence Reports (CIR), geospatial applications, crop production maps at a subnational level and crop calendars for the top-20 producing countries. Additionally, Crop Explorer (<https://ipad.fas.usda.gov/cropexplorer/>) displays rainfall, temperature, evapotranspiration, soil moisture, snow cover, and vegetation conditions in charts and maps.

### USDA and NASA Global Agricultural Monitoring (GLAM)

<https://glam1.gsfc.nasa.gov/>

The USDA and NASA Global Agricultural Monitoring (GLAM) system provides near real-time and science quality Moderate Resolution Imaging Spectroradiometer (MODIS) Normalized Difference Vegetation Index (NDVI) from the satellites Terra and Aqua. The public can view and retrieve MODIS 8-day composited, global NDVI satellite imagery and time series data. GLAM was developed by NASA's Global Inventory Modeling and Mapping Studies (GIMMS) group for USDA's Foreign Agricultural Service.

### Global Agricultural and Disaster Assessment System (GADAS)

<https://geo.fas.usda.gov/GADAS/index.html>

USDA's Foreign Agricultural Service (FAS) provides the Global Agricultural and Disaster Assessment System (GADAS), a web-based Geographic Information System (GIS) tool which integrates a vast array of highly detailed earth observation data streams, particularly targeted towards agricultural and disaster assessment analysis. GADAS is an interactive website which provides analysts with a wide variety of routine geospatial products (maps, charts, tables) they require for comprehensive situational investigations and recurring assessments.

### Export Sales Reporting

<https://apps.fas.usda.gov/esrquery/>

USDA's Export Sales Reporting Program monitors U.S. agricultural export sales on a daily and weekly basis. Export sales reporting provides a constant stream of up-to-date market information for 40 U.S. agricultural commodities sold abroad. The weekly U.S. Export Sales report is the most currently available source of U.S. exports sales data. The data is used to analyze overall levels of export demand, determine where markets exit, and assess the relative position of U.S. commodities in foreign markets.

### Global Agricultural Trade System (GATS)

<https://apps.fas.usda.gov/gats/default.aspx>

The Global Agricultural Trade System (GATS) is a searchable database containing monthly U.S. Census Bureau trade data organized by agricultural commodity and agricultural related product groups. Trade data is searchable by partner countries and partner groups. Historical U.S. agricultural trade data is available back to 1967. In addition, U.N. trade statistics (UN Comtrade) may be queried through GATS. UN trade data is available for nearly 200 countries or areas, dating from the inception of the Harmonized System (HS) of trade codes in 1989 to present. The database is continuously updated. U.S. trade data is updated monthly according to the U.S. Census Bureau's reporting system. UN Comtrade data are updated in GATS after nationally submitted data to the UN are standardized by the UN Statistical Division and added to the UN Comtrade database.

**TABLE 18**

The table below presents a record of the July projection and the final Estimate. Using world wheat production as an example, the "root mean square error" means that chances are 2 out of 3 that the current forecast will not be above or below the final estimate by more than 2.8 percent. Chances are 9 out of 10 (90% confidence level) that the difference will not exceed 4.7 percent. The average difference between the July projection and the final estimate is 13.9 million tons, ranging from 1 million to 34.6 million tons. The July projection has been below the estimate 24 times and above 16 times.
