# World Agricultural Production

## Pakistan Cotton: Flooding Lowers Production

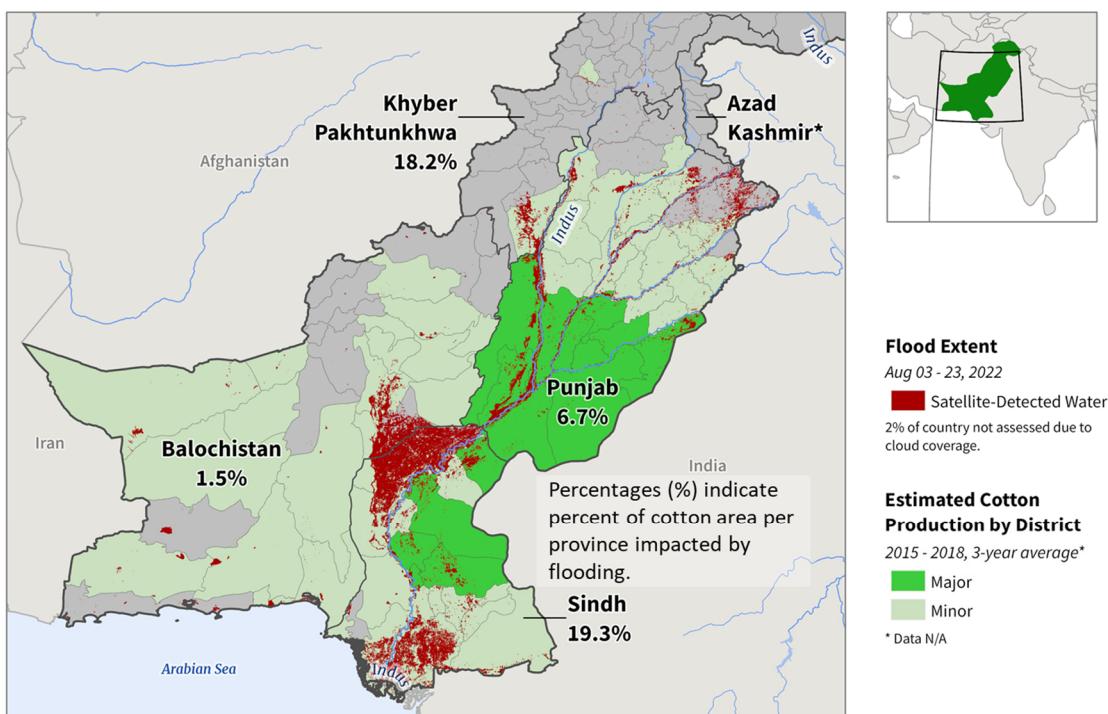

USDA estimates marketing year (MY) 2022/23 Pakistan cotton production at 5.5 million 480-pound bales, down 0.7 million bales (11 percent) from last month, and down 0.5 million bales (8 percent) from last year. Area is estimated at 2.0 million hectares, down 0.2 million (9 percent) from last month and unchanged from last year. The yield is forecast at 599 kilograms per hectare. This is 1 percent below the five-year average of 606 kilograms per hectare.

Approved by the World Agricultural Outlook Board

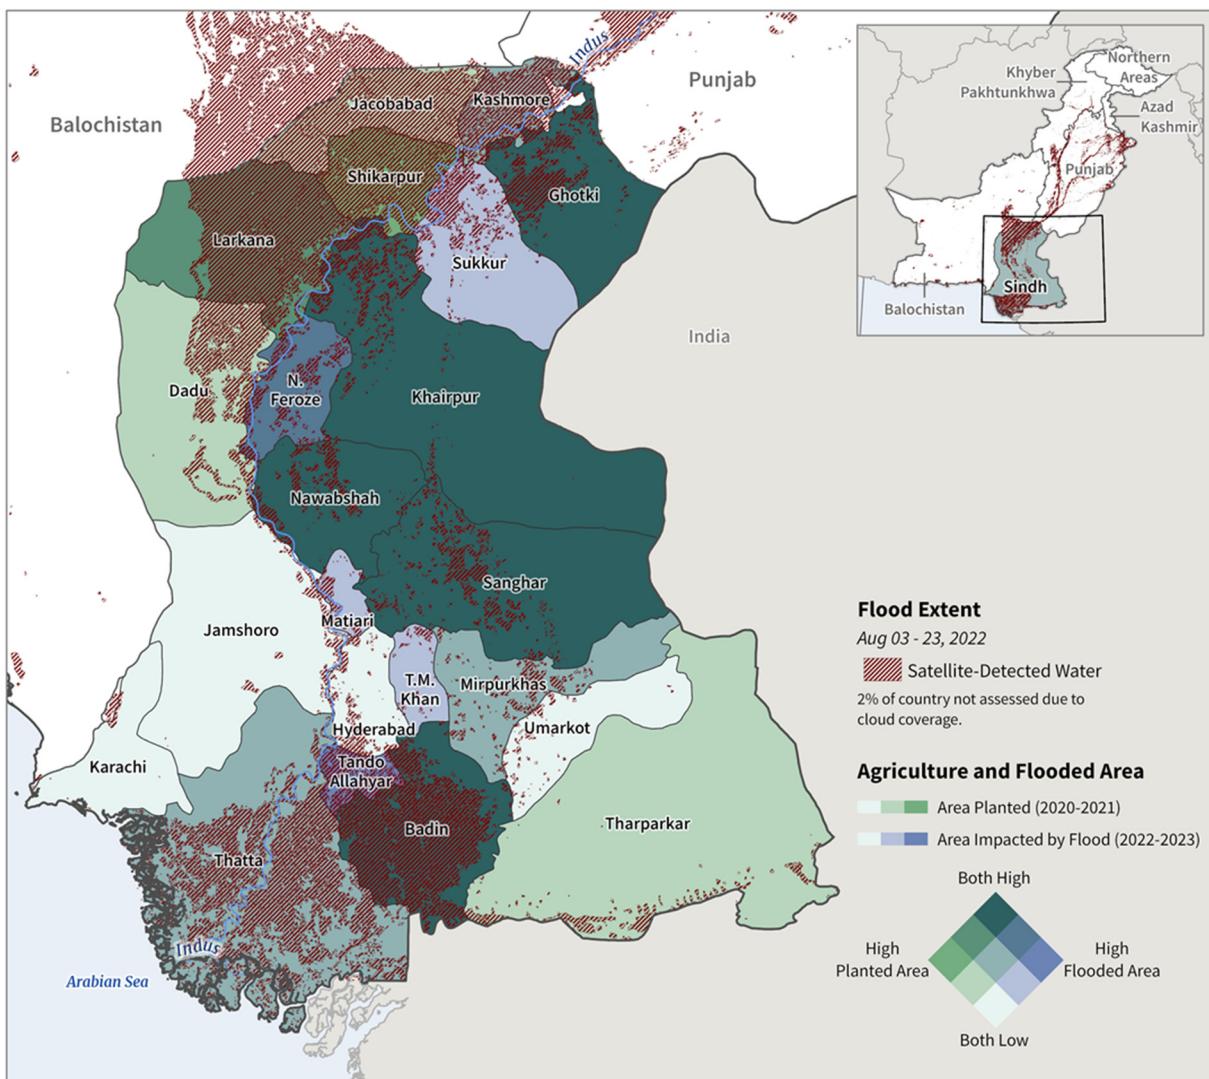

Production is revised down based on estimated lower area due to severe flooding in important production areas of Sindh and scattered areas along the Indus River in Punjab. Due to the flooding, MY 2022/23 projected harvested area is reduced 9 percent to 2.0 million hectares.

### Pakistan Cotton-Producing Areas: August Flood Extent

According to FAS/Islamabad, cotton producing districts in the province of Sindh most affected are Sukkur, Khairpur, Naushahro Feroze, and Ghotki, and have large crop areas inundated with flood waters. If the flood waters recede quickly, some production in these areas may recover, but substantial loss has already occurred.

## Sindh, Pakistan: Flood Extent and Agriculture

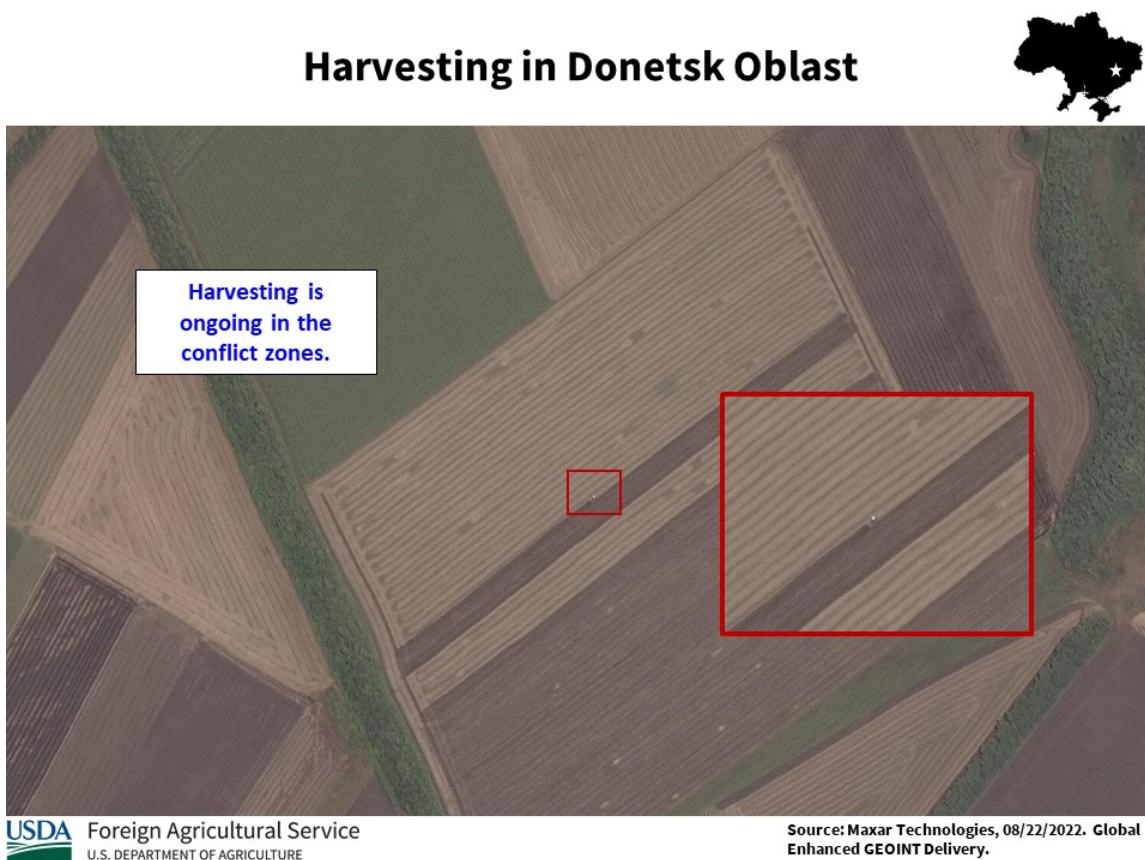

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Sources: United Nations Satellite Center (UNOSTAT), VIIRS Flood Extent (Aug 03 - 23, 2022);  
Sindh Agricultural Department; Sindh Disaster Management Authority (Aug 30, 2022)

Cotton is grown under irrigated conditions with the Tarbela Reservoir providing most of the irrigation water. Approximately 66 percent of Pakistan's total cotton crop is produced in Punjab province and the remaining 33 percent is in Sindh province. (*For more information, please contact [James.Crutchfield@usda.gov](mailto:James.Crutchfield@usda.gov).*)

## Ukraine Wheat: Production Higher Based on Harvest Results

Ukraine wheat production for marketing year 2022/23 is estimated at 20.5 million metric tons, up 5 percent from last month, but down 38 percent from last year. USDA crop production estimates for Ukraine include estimated output from Crimea and Ukrainian oblasts currently under Russian control due to the war. Yield is estimated at 3.90 tons per hectare, up 5 percent from last month, but down 12 percent from last year's record. Harvested area is estimated at 5.25 million hectares (mha), unchanged from last month, but down 29 percent from last year.

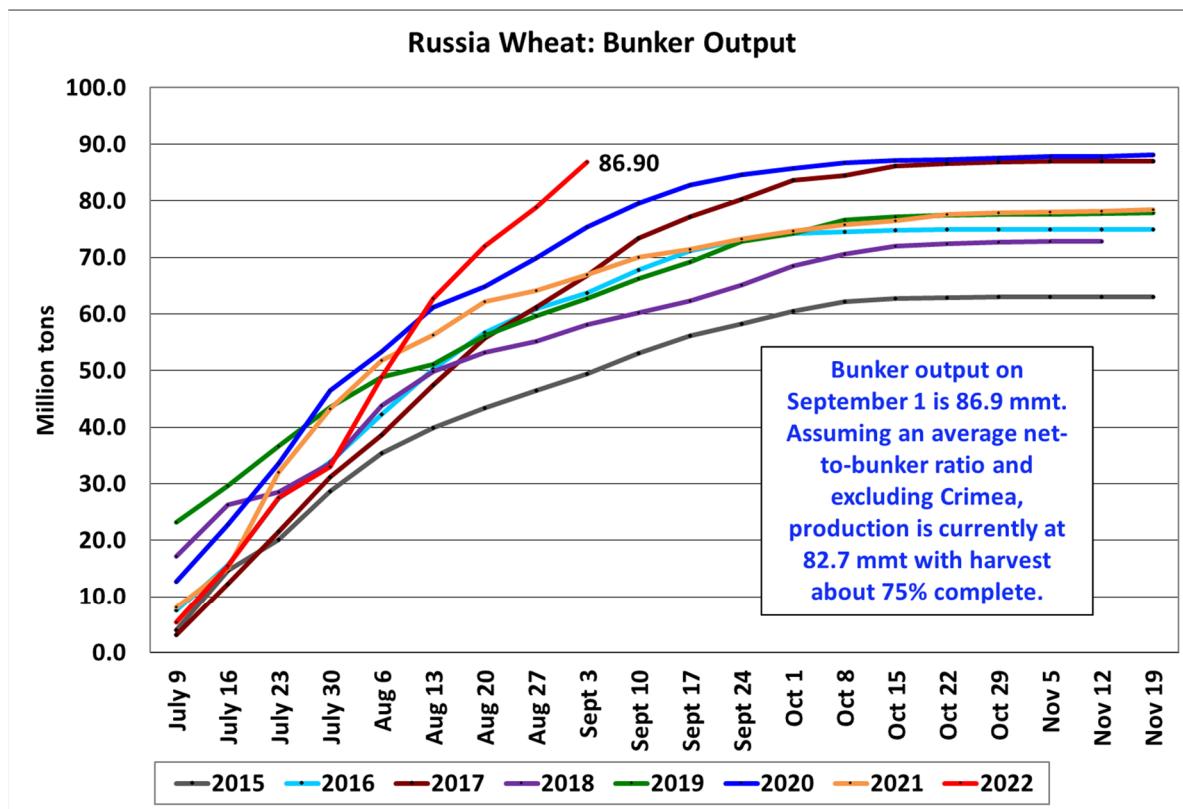

In Ukraine, 97 percent of total wheat production is winter wheat and harvest is essentially complete. Based on operational data from the Ukraine Ministry of Agriculture, as of the end of August, 4.62 mha has been harvested. This data, however, does not include reporting on the oblasts of Crimea, Donetsk, Luhansk, Zaporizka and Kherson. USDA, however, does include these areas. Crimean wheat area is, on average, about 0.3 mha. The other oblasts are currently under active conflict so reporting has ceased, but by using high resolution commercial satellite imagery, harvesting can be seen occurring in these oblasts. The oblasts under conflict have lower area, year-to-year, due to mines in fields, bomb craters, and debris left in fields. Wheat area may be abandoned due to lack of fuel or manpower.

Yield is increased month-to-month based on Ministry of Agriculture harvest results. At the end of August, bunker yield is reported at 4.08 t/ha. Since USDA publishes in net weight, an average net-to-bunker conversion is assumed. (*For more information, please contact [Katie.McGaughey@usda.gov](mailto:Katie.McGaughey@usda.gov).*)

## Russia Wheat: Record Yield

Russia wheat production for marketing year 2022/23 is estimated at 91.0 million metric tons (mmt), up 3 percent from last month and up 21 percent from last year. The estimate includes 68.0 mmt of winter wheat and 23.0 mmt of spring wheat. USDA crop production estimates for Russia exclude estimated output from Crimea which is included in Ukraine. Total wheat yield is estimated at a record 3.17 tons per hectare, up 3 percent from last month, and up 17 percent from last year. Total harvested area is estimated at 28.7 million hectares, unchanged from last month but up 4 percent from last year.

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

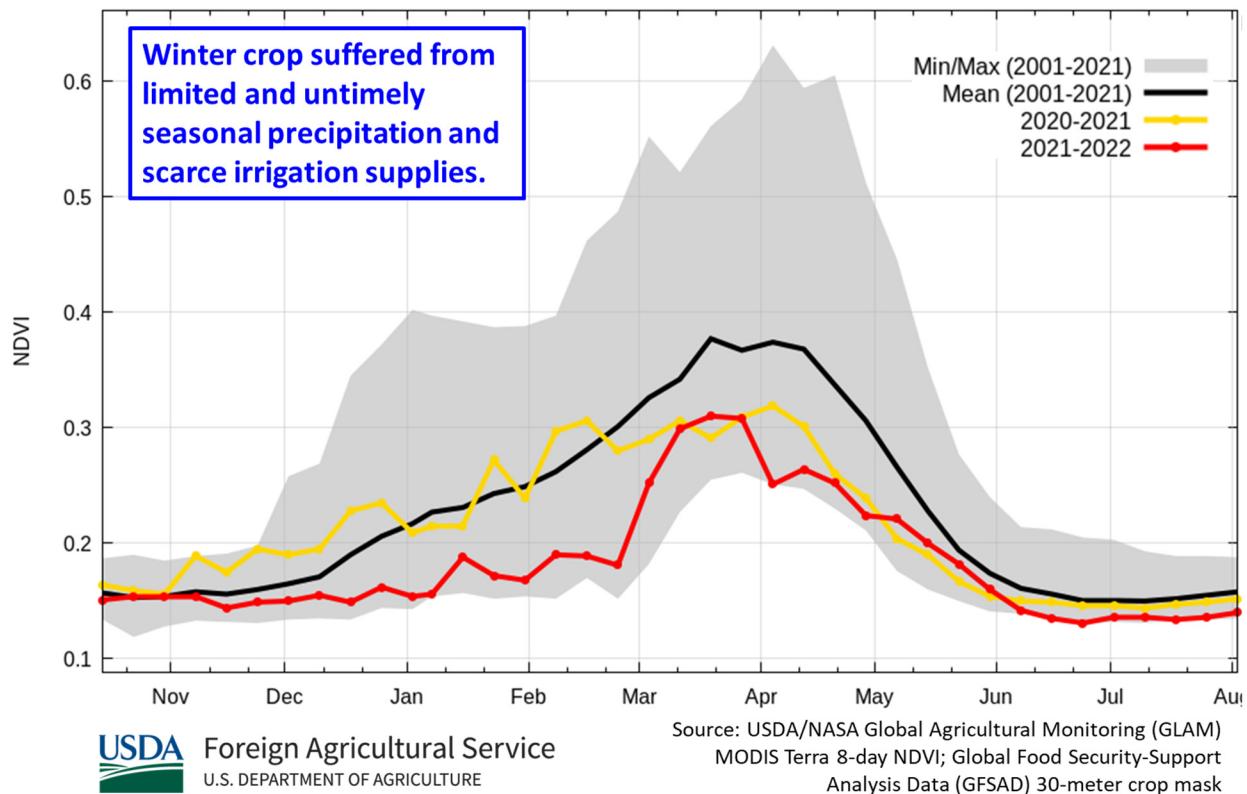

Source: Russia Ministry of Agriculture

Russia reports wheat harvest on a bunker weight basis, and USDA publishes on a net weight basis. Winter wheat harvest is essentially complete and spring wheat harvest has begun. Total Russia wheat yield typically starts high and decreases as harvest moves from the higher yielding southern oblasts in European Russia (Southern and North Caucasus Districts) to the lower yielding northern oblasts (Central and Volga Districts) in European Russia. This year, however, total yield harvest remains high, due to early-season favorable conditions in the Central and Volga Districts. Area, yield, and production estimates for Russia winter wheat and spring wheat are available on PSD Online. Select “Downloadable Data Sets” and open the zipped file for “Russia Wheat; Winter/Spring Area & Production.” (For more information, please contact [Katie.McGaughey@usda.gov](mailto:Katie.McGaughey@usda.gov).)

## Syria Wheat: Scarce Water Availability Hampers Production

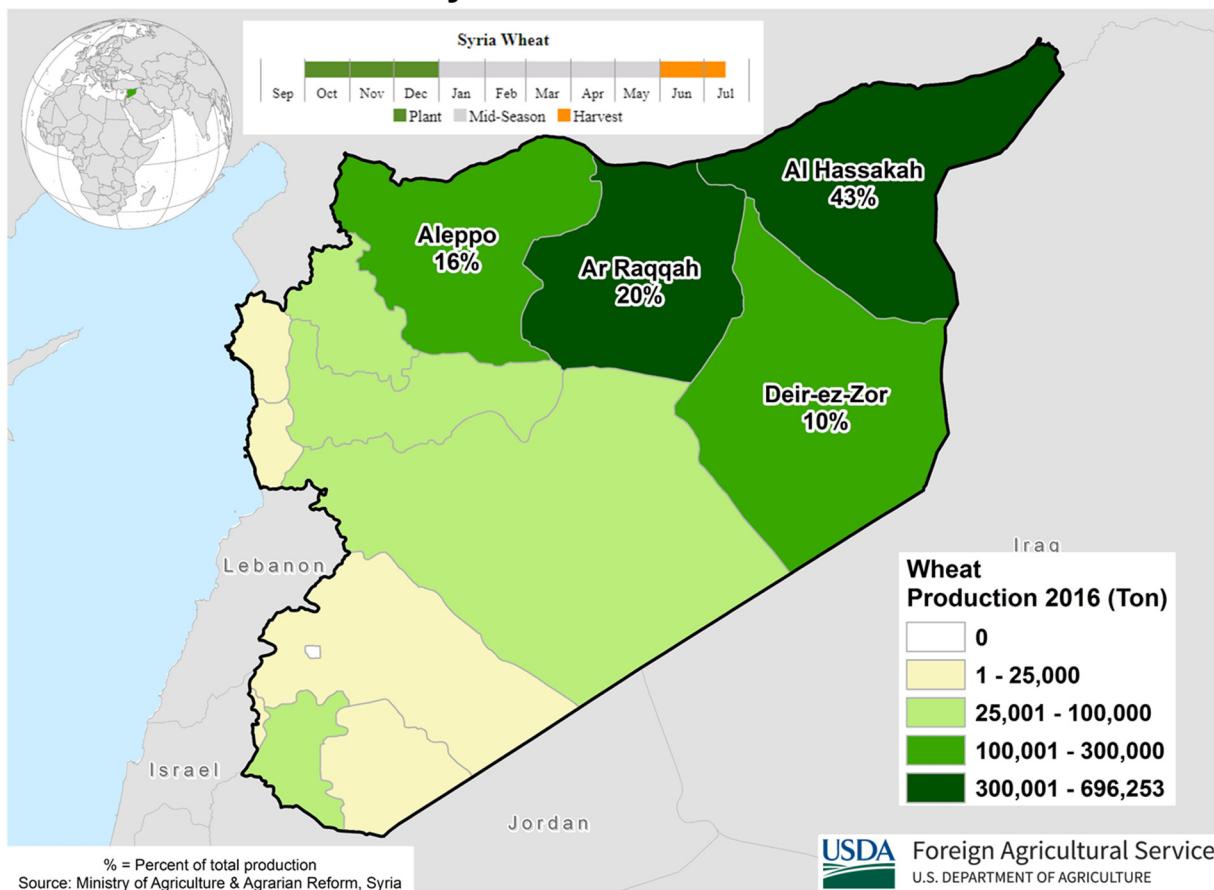

USDA estimated Syria wheat production for marketing year (MY) 2022/23 at 2.1 million metric tons, down 16 percent from last month. Harvested area is estimated at 1.2 million hectares, down 8 percent from last month. Yield is estimated at 1.75 metric tons per hectare, down 9 percent from last month.

### Below average NDVI across Aleppo and Ar Raqqah, Syria

The key wheat producing area is northern Syria. This includes the governorates of Al Hasakah, Ar Raqqah and Aleppo. Wheat is typically planted in the fall between October and December; harvest starts in June and lasts until late July.

## Syria: Wheat Production

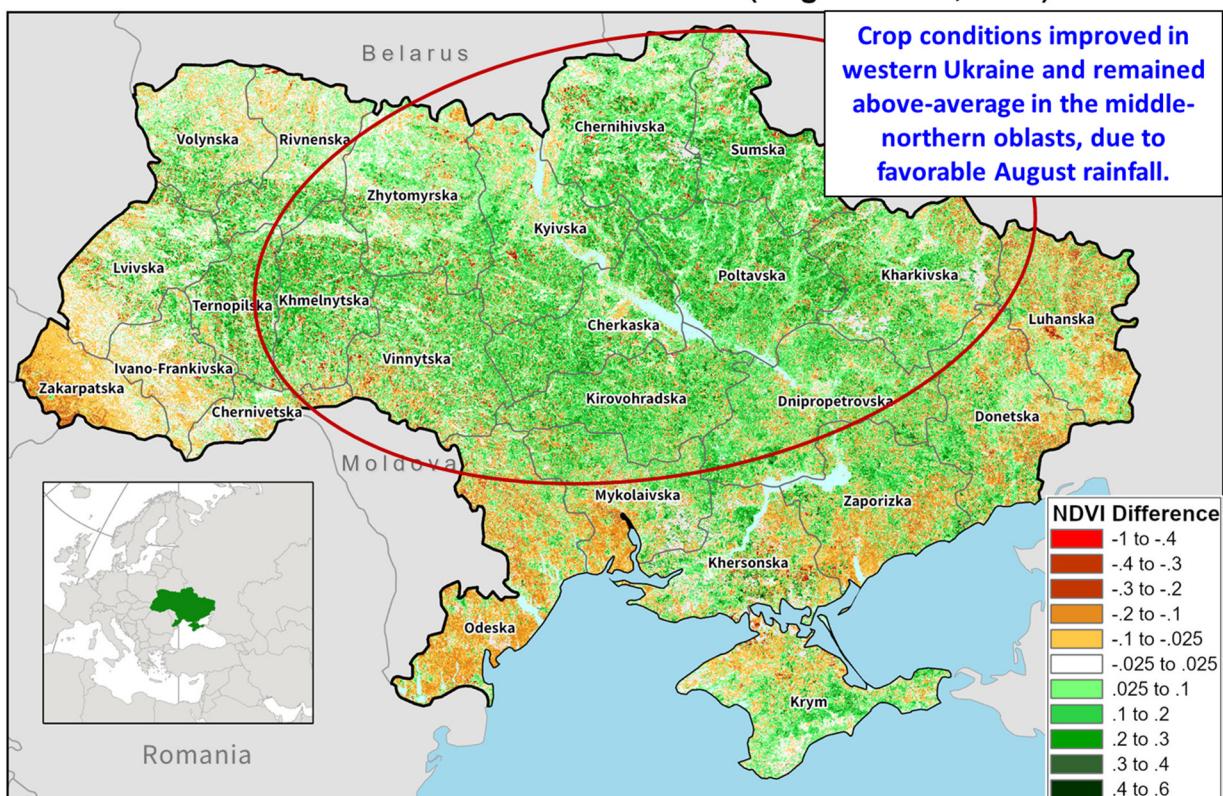

Limited and untimely seasonal precipitation, conflicts, and high input costs are some of the major factors contributing towards the lower-than-initially expected production. Crops were planted under sub-optimal soil moisture conditions in the fall and failed to receive adequate water supplies during the key yield formation stages. Wheat in Al Hasakah, the lead producing governorate, is almost entirely rain-fed, while it is partially irrigated in Ar Raqqah and Aleppo. Water flow in the Euphrates River, which is the major irrigation source for the latter two governorates, has been substantially limited since early 2021 due to the drought that hit the Middle East region during MY 2021/22. (*For more information, please contact [Iliana.Mladenova@usda.gov](mailto:Iliana.Mladenova@usda.gov).*)

## Ukraine Corn: Favorable August Weather Boosts Yield in the West

Ukraine corn production for marketing year 2022/23 is estimated at 31.5 million metric tons, up 5 percent from last month but down 25 percent from last year. Yield is estimated at 7.00 tons per hectare, up 5 percent from last month, but down 9 percent from last year. Harvested area is estimated at 4.5 million hectares, unchanged from last month, but down 18 percent from last year.

UKRAINE: NDVI Difference from Normal (August 13-20, 2022)

Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

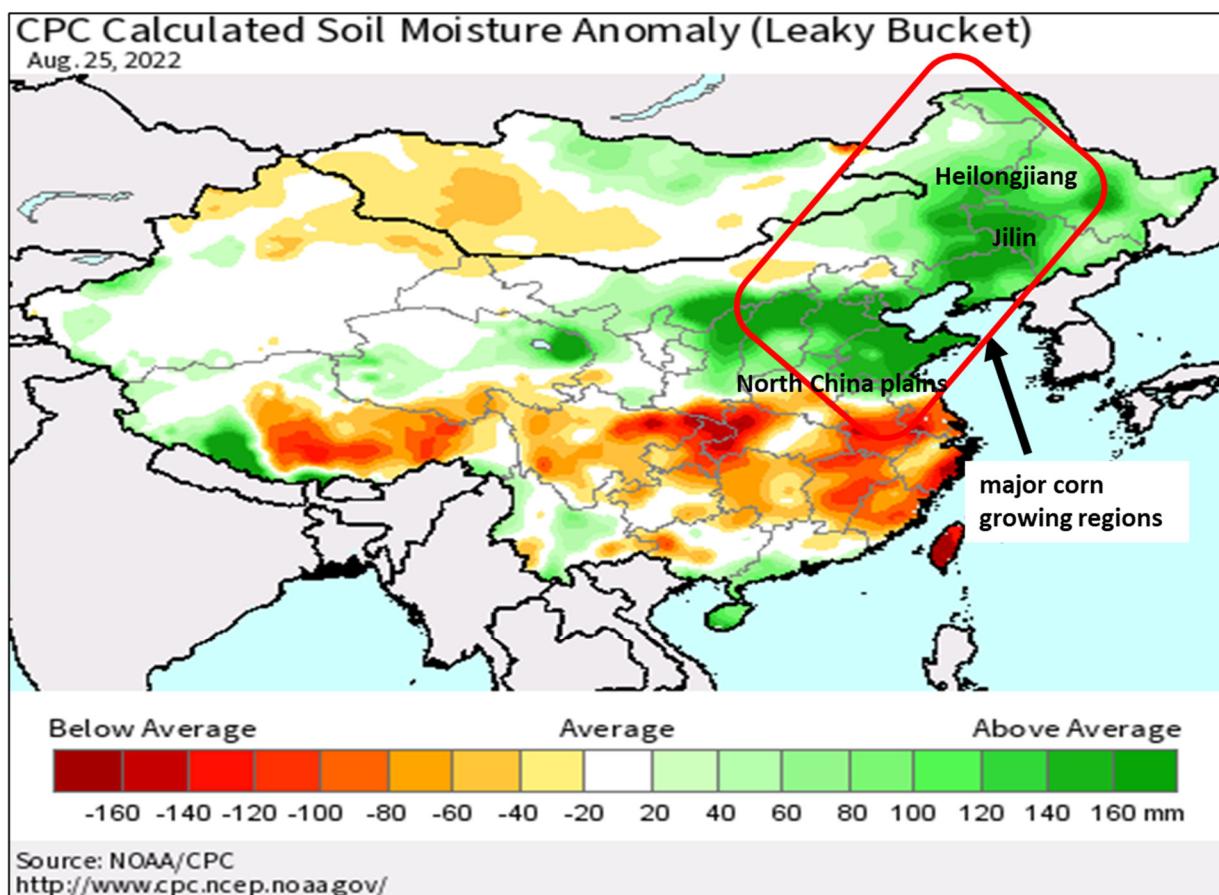

Source: MODIS Terra 8-day NDVI Anomaly  
USDA/NASA Global Agricultural Monitoring (GLAM)  
<https://glam1.gsfc.nasa.gov/>

Yield is up month-to-month due to favorable rainfall and minimal heat stress days throughout August in the western corn growing regions. Crop conditions, particularly in the oblasts bordering Moldova and Romania, improved since last month. Crop conditions throughout the rest of the corn belt, circled in red on the map, remained above average. Harvest began in early September. USDA crop production estimates for Ukraine include estimated output from Crimea and Ukrainian oblasts currently under Russian control due to the war. (*For more information, please contact [Katie.McGaughey@usda.gov](mailto:Katie.McGaughey@usda.gov).*)

## China Corn: Production Increased Due to Record Yield

USDA forecasts China marketing year (MY) 2022/23 corn production at a record 274.0 million metric tons (mmt), up 3 million or 1 percent from last month, up 1 percent from last year and 5 percent above the 5-year average of 262.1 mmt. Yield is forecast at a record 6.37 metric tons per hectare (mt/ha), up 1 percent from last month, up 1 percent from last year and 2 percent from the 5-year average.

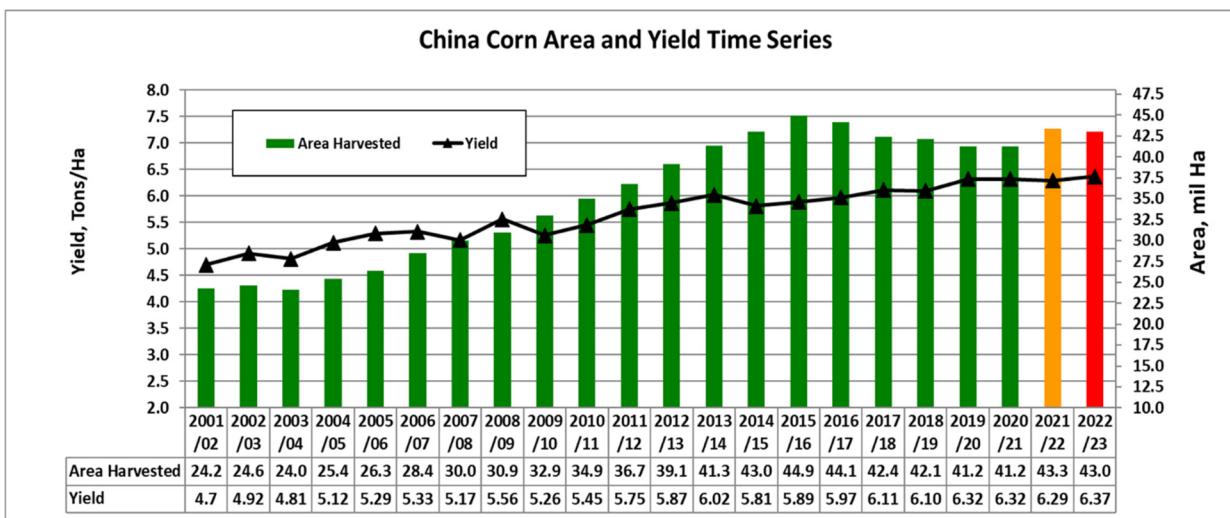

### China Soil Moisture Conditions

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Source: NOAA CPC

Area is estimated at 43.0 million hectares (ha), unchanged from last month, but down approximately 0.3 million ha or 1 percent from last year. In recent years there have been marginal increases in the major production provinces of Heilongjiang, Jilin, Shandong, Henan, Inner Mongolia, and Hebei. This has been primarily attributed to incentivizing agricultural policies, such as reversing past efforts to reduce corn area, increasing crop rotation of grain crops, subsidizing corn processors and ethanol initiatives, and implementing other incentives.

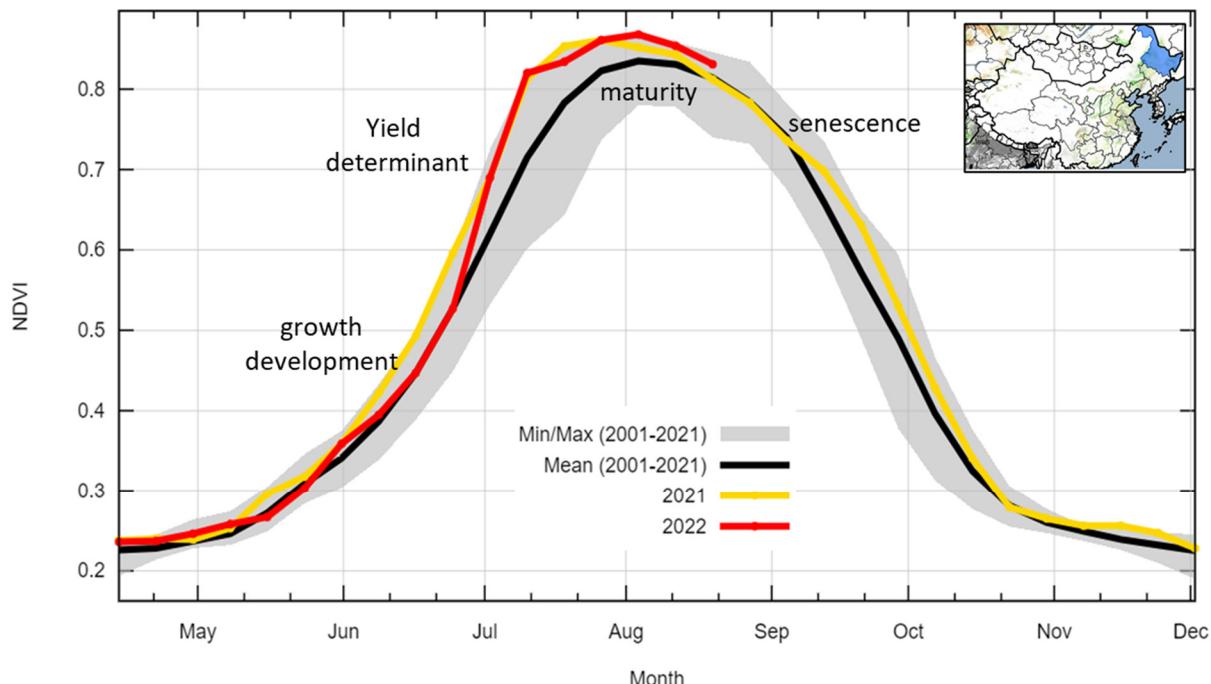

Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Source: USDA PSD Online

The MY 2022/23 season has been characterized by favorable growing conditions across the major corn belt in the northeast and north central plains. In general, the Northeast Provinces of Heilongjiang, Jilin, and Inner Mongolia, where at least half of the nation's corn is produced, experienced ideal weather conditions for a significant portion of the growing season. The conditions facilitated rapid planting and crop establishment resulting in favorable corn yield expectations. The favorable weather conditions support record yields in the Northeast Provinces of Heilongjiang, Jilin, and Inner Mongolia. In contrast, some minor corn production regions in the southeast (including Sichuan) have experienced anomalously high temperatures and dry conditions that may result in lower-than-expected yields. In sum, the major production regions have experienced favorable rainfall and soil moisture conditions throughout the season, thereby significantly offsetting low productivity in the southeast regions.

## Above Average 2022 NDVI Curve in Heilongjiang Province

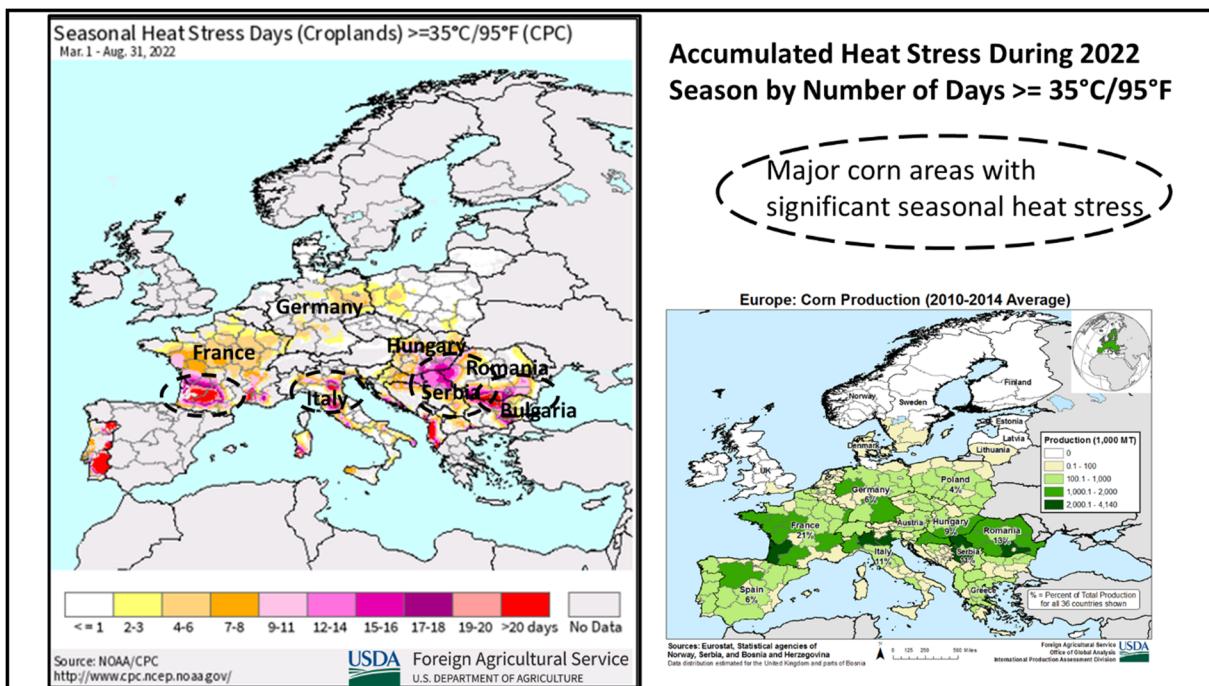

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

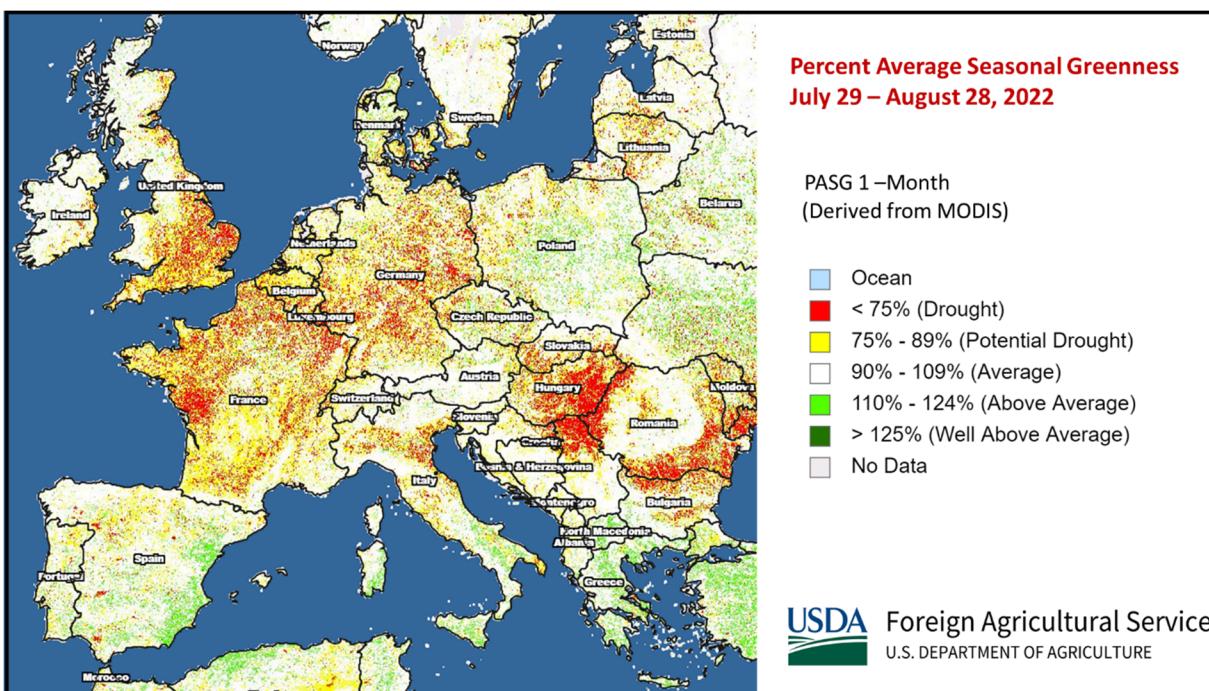

Source: USDA/NASA Global Agricultural Monitoring (GLAM)  
MODIS Terra 8-day NDVI

The crop is at advanced physiological maturity stages and harvest typically starts in October. Approximately 75 percent of China's corn is used for feed. (*For more information, please contact [Dath.Mita@usda.gov](mailto:Dath.Mita@usda.gov).*)

## EU Corn: Harvest Underway with Deteriorated Yield Expectations

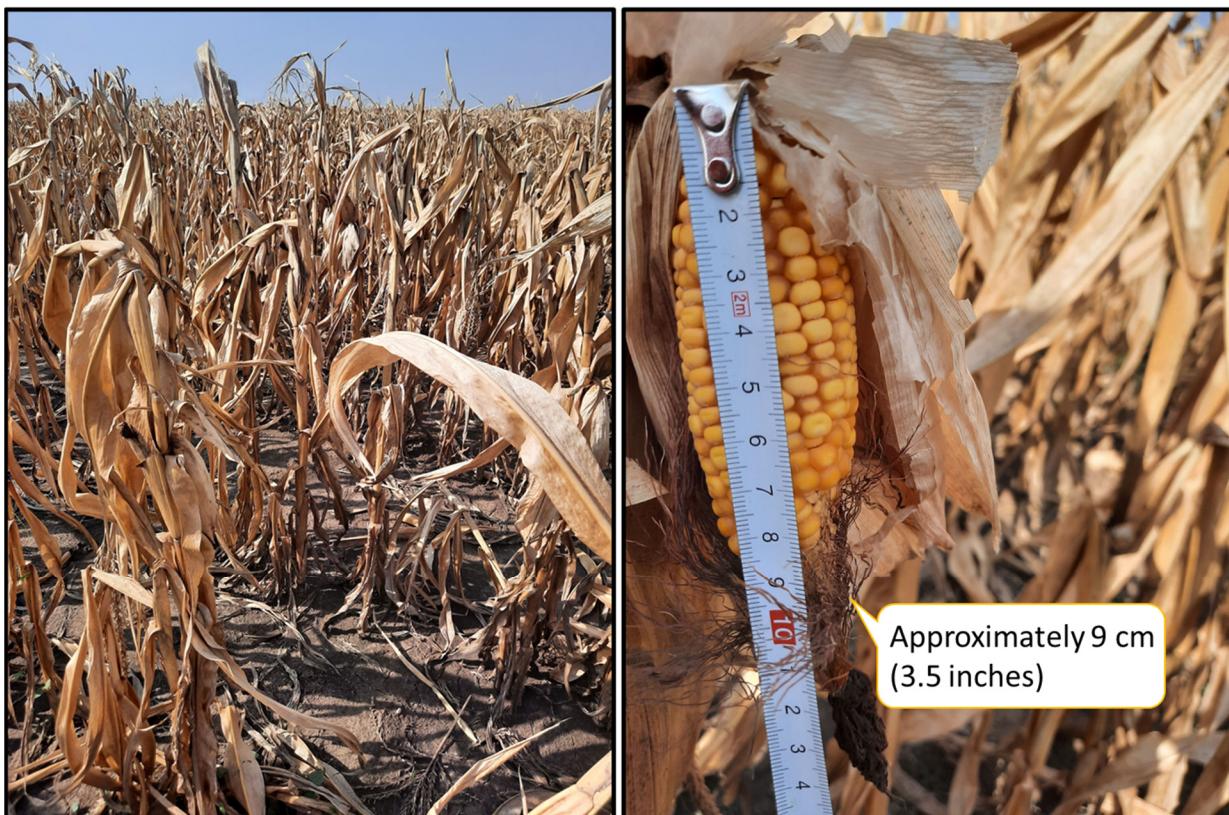

European Union (EU) (MY) 2022/23 corn production is forecast at 58.8 million metric tons (mmt), down 1.2 mmt (2 percent) from last month, 12.2 mmt (17 percent) below last year's crop, and 11 percent below the 5-year average. Area is estimated at 9.0 million hectares (mha), unchanged from last month, but 0.2 mha or 3 percent down from last year. Yield is estimated at 6.53 tons per hectare (t/ha), down 2 percent from last month, 15 percent from last year, and 14 percent from the 5-year average.

The corn harvest is ongoing in much of Europe and reports are confirming deteriorated yields. Extreme heat and historic drought in many of the major corn regions have created a difficult growing season for farmers. Rainfall was minimal, high temperatures dried plants and stymied kernel growth, and irrigation water was, and continues to be, restricted. The searing heat and crippling drought were constant, affecting pollination and grainfill in July and early August. The heat also accelerated plant maturity, and, in some cases, the crop was a month ahead of normal development. FAS/Bucharest traveled in southeastern Romania and found highly variable corn yields of 1 to 8 t/ha. Satellite derived Percent of Average Seasonal Greenness imagery for August shows conditions in many corn regions to be drying down much earlier than normal.

### Corn Conditions in Southern Romania (Near Alexandria); August 30, 2022

Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

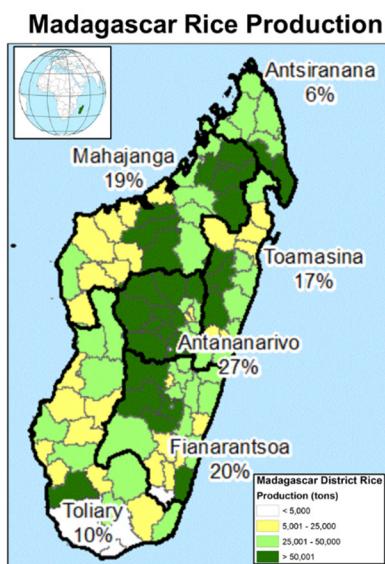

Pictures courtesy of USDA/FAS staff in Bucharest, Romania

Within the EU, the biggest reduction to corn occurred in France (the EU's largest corn producer), with a 0.4 mmt reduction. Significant reductions were also made in Romania (300 mmt), Germany (225 mmt), and in both Hungary and Poland, where each were reduced by 0.1 mmt. The combined, 1.2 mmt September EU reductions follow the much larger 8.0 mmt EU corn reduction in August.

For country-specific area, yield, and production estimates within the European Union (EU), please go to PSD Online at <https://apps.fas.usda.gov/PSDOnline/app/index.html#/app/home>, and select “Downloadable Data Sets.” Select the zipped file for “EU Countries Area & Production.” (*For more information, please contact [Bryan.Purcell@usda.gov](mailto:Bryan.Purcell@usda.gov).*)

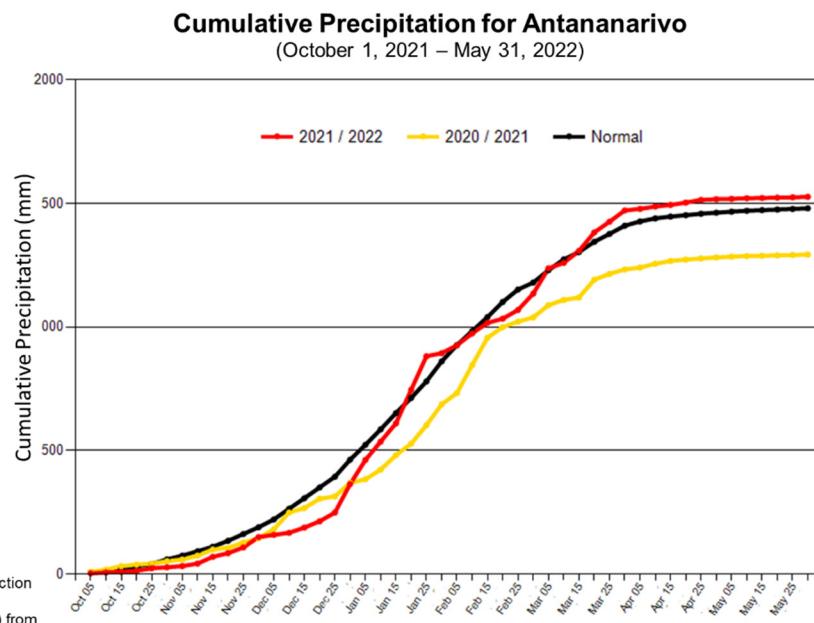

## Madagascar Rice: Favorable Rains Improve Production Prospects

Madagascar's milled rice production for marketing year 2022/23 is estimated at 2.8 million metric tons, up 13 percent from last month, down 2 percent from last year, and up 5 percent from the 5-year average. Harvested area is estimated at 1.6 million hectares, unchanged from last month, down 3 percent from last year, and up 2 percent from the 5-year average. Yield is estimated at 2.69 metric tons per hectare, up 13 percent from last month, up 1 percent from last year, and up 3 percent from the 5-year average. Total harvested area is expected to be less than last year after two destructive tropical cyclones in February caused crop area losses in eastern Madagascar.

Source: Average district rice production data (2011-2015) from Madagascar's Ministry of Agriculture, Livestock and Fisheries.

USDA Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

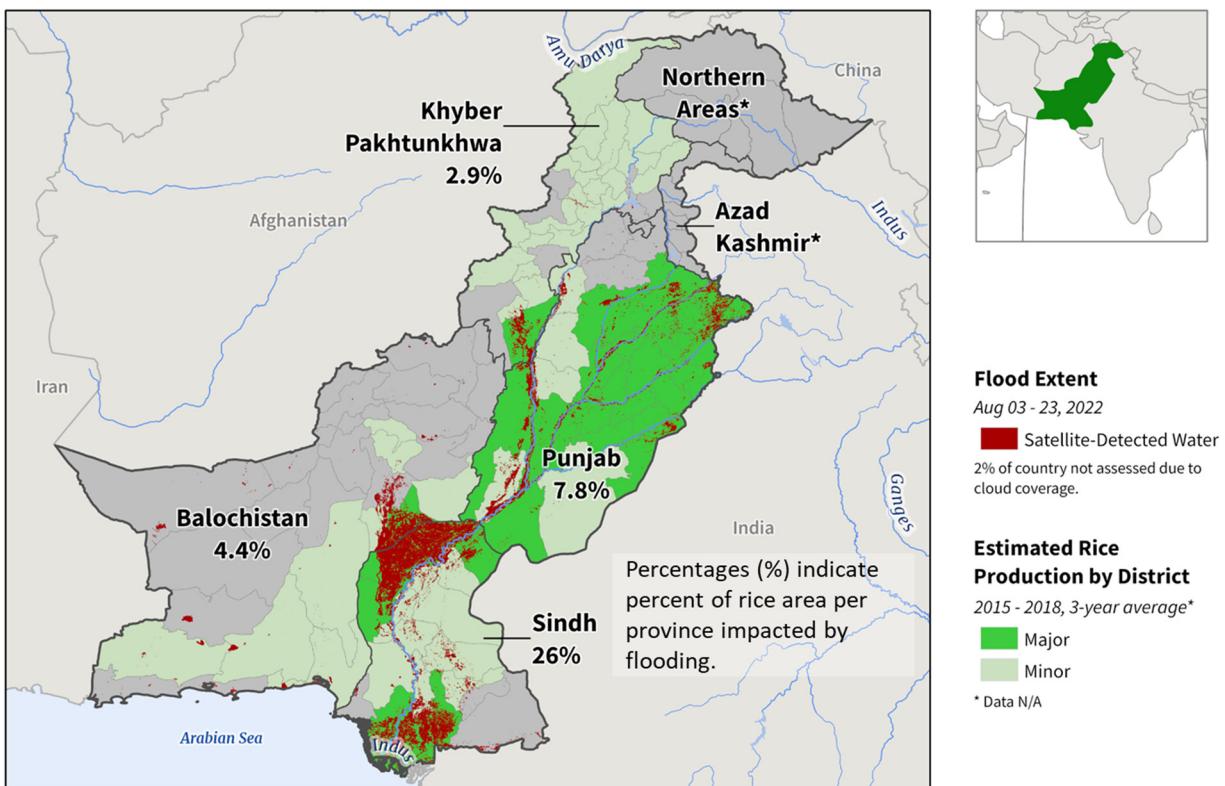

Rice in Madagascar is planted during November and December and harvested from April through June. Rains from November through January were below average which delayed planting, but tropical cyclones Batsirai (February 5) and Emnati (February 23) provided beneficial rains for the main rice producing regions in the central and northern half of the country. Total production is expected to be above-average after most of the country received average to above-average seasonal rainfall which helped to fill water dams for the irrigated crop and boosted rainfed yields. Approximately 80 percent of Madagascar's rice area is irrigated.

Madagascar is the third largest rice producer in Africa, behind Nigeria and Egypt. Rice is planted in almost all administrative zones in Madagascar and rice is the main subsistence crop grown. Madagascar's government has set a goal to increase rice production by improving the supply of inputs, introducing better crop management practices and varieties, increasing technical extension support, and rehabilitating irrigation infrastructure. (*For more information, please contact [Curt.Reynolds@usda.gov](mailto:Curt.Reynolds@usda.gov).*)

## Pakistan Rice: Production Reduced by Flooding

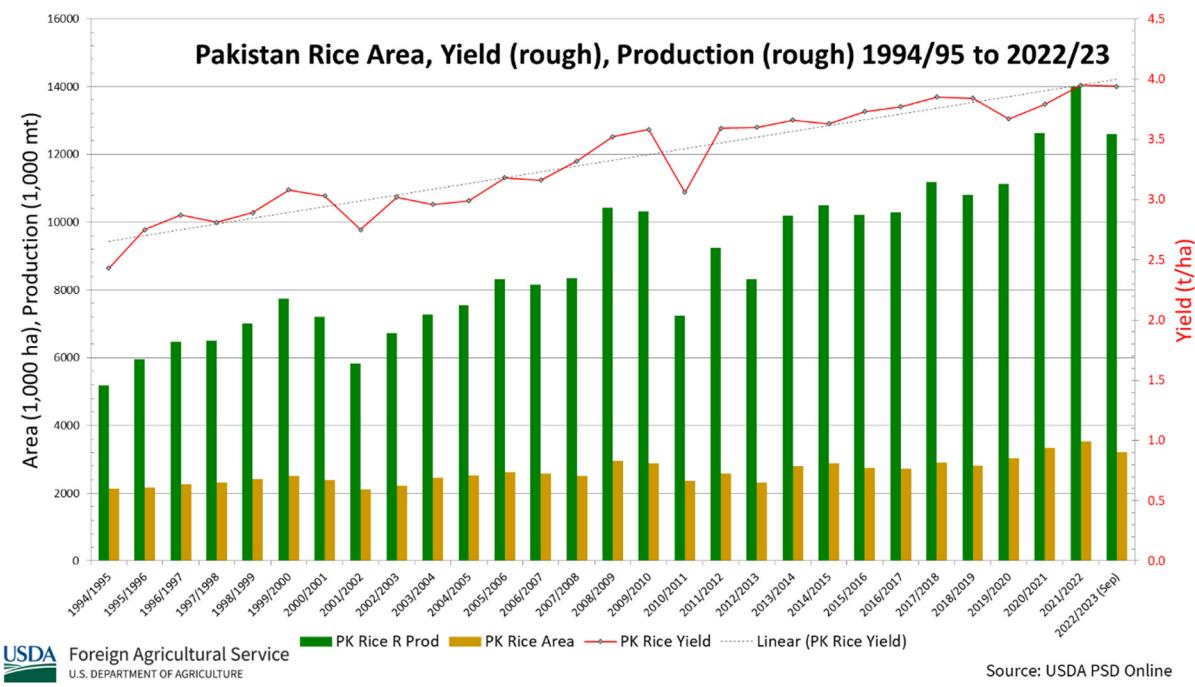

### Pakistan Rice-Producing Areas: August Flood Extent

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

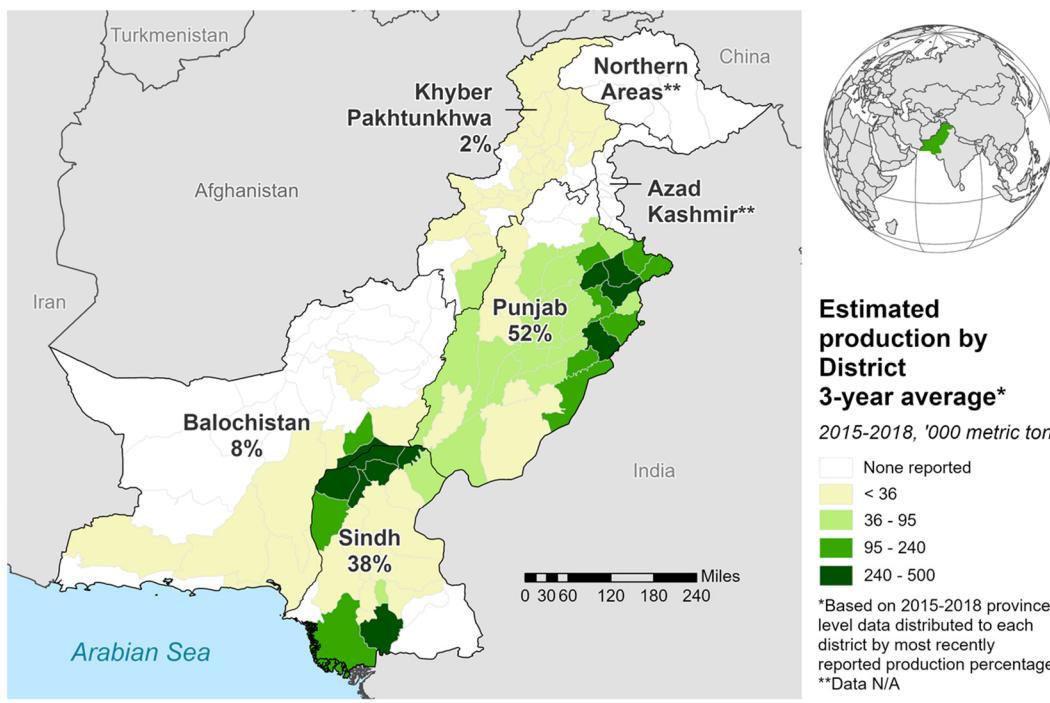

Sources: United Nations Satellite Center (UNOSTAT), VIIRS Flood Extent (Aug 03 - 23, 2022); 2018 Agricultural Marketing Information Service, Pakistan; Khyber Pakhtunkhwa (K.P.) Bureau of Statistics

Pakistan rice production for marketing year 2022/23 is estimated at 8.4 million metric tons (mmt) (milled basis), down 0.5 mmt (6 percent) from last month, and down 0.9 mmt (10 percent) from last season's record crop. Harvested area is estimated at 3.2 million hectares (mha), down 0.3 mha (10 percent) from last season's record area. Yield is estimated at 3.94 tons per hectare (t/ha), similar to last month and last season.

Production is revised down based on estimated lower area. The area estimate is reduced due to flooding in production areas of northwest Sindh and scattered areas of Punjab. Due to the flooding, MY 2022/23 projected harvested area is reduced 6 percent from last month to 3.2 million hectares. If the flood waters recede quickly, some production in these areas may recover.

## Pakistan: Rice Production

USDA Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

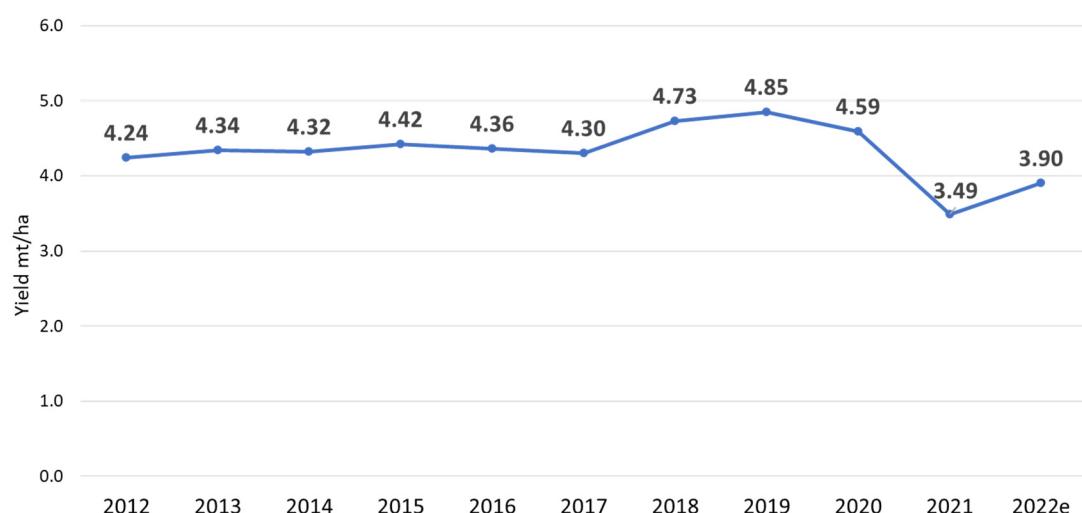

Source: Agricultural Marketing Information Service;  
Pakistan Bureau of Statistics;  
Crop Reporting Service

Rice is grown under irrigated conditions with the Tarbela Reservoir providing most of the irrigation water. Pakistan is a leading producer and exporter of Basmati and IRRI rice (white long grain rice). Rice ranks second among the staple food grain crops in Pakistan and exports are a major source of foreign exchange earnings. Pakistan has two major rice-producing provinces, namely Punjab and Sindh. Both provinces account for nearly 90 percent of total rice production. Punjab, due to its agro-climatic and soil conditions, produces 100 percent of the Basmati rice in the country. (*For more information, please contact [James.Crutchfield@usda.gov](mailto:James.Crutchfield@usda.gov).*)

### Sri Lanka Rice: Production Estimate Up Slightly; Yield Rebounds from Last Year

USDA estimates marketing year (MY) 2022/23 Sri Lanka rice production at 2.7 million metric tons milled, up nearly 1 percent from MY 2021/22. This 1 percent increase is due to availability of agricultural inputs such as chemical fertilizers. Harvested area is estimated at 1.0 million hectares, down 10 percent from last year. Yields are estimated to reach 3.90 metric tons per hectare, up nearly 12 percent from last year.

### Sri Lanka Rice Yield (2012 – 2022)

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Source: USDA PSD Online

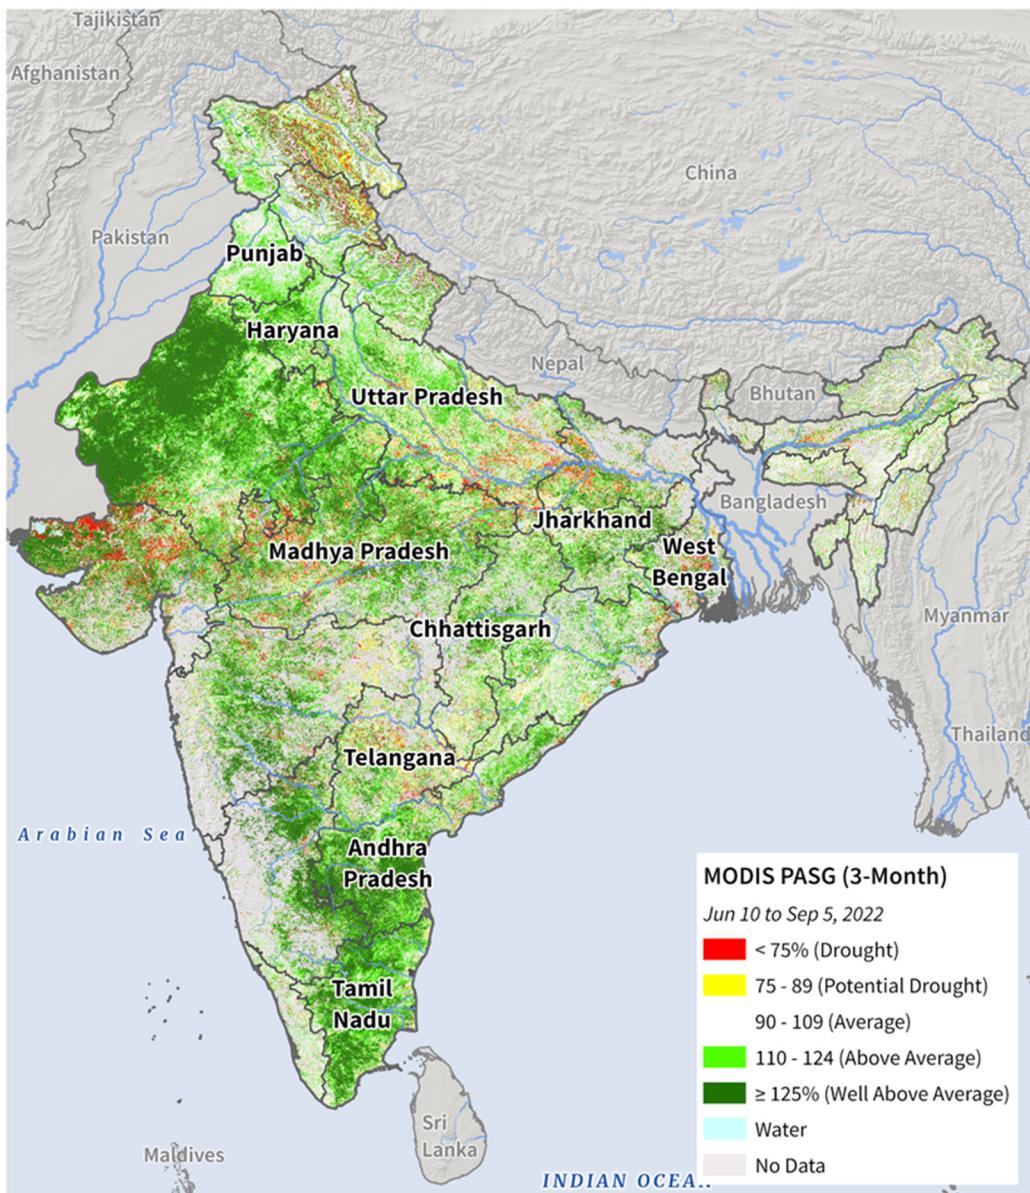

Although the government lifted the chemical fertilizer ban last year, Sri Lanka's economic collapse impacted farmers, who had trouble affording agricultural inputs such as fertilizers and seeds. According to reports, the 2022 *yala* rice yields are lower, however, the 2022/23 *maha* season will likely offset the lower *yala* production. Recently, the World Bank, Asian Development Bank, and others pledged to provide loans or donations for agricultural inputs to low-income farmers for the 2022/23 *maha* season.

USDA combines the 2022 *yala*, which accounts for 40 percent of the total production, and the 2022/23 *maha* crop for the total estimate. The 2022 *yala* harvest will be completed in September. (*For more information, please contact [Arnella.Trent@usda.gov](mailto:Arnella.Trent@usda.gov)*)

## India Rice: Yields Forecast to Drop Due to Dry Conditions in the Northeast

USDA forecasts India rice production for marketing year (MY) 2022/23 at 126.5 million metric tons (milled), down 2 percent from last month and down nearly three percent from MY 2021/22. This decline will mark the first time without a year-to-year increase in production since MY 2015/16. The 2022 Southwest monsoonal rains have been above average, except for the Northeast region. Harvested area is expected at 45.5 million hectares, down 1 percent from last month and 3 percent from last year. Yield is forecast at 4.17 metric tons per hectare, down slightly from August, but up marginally from last year.

### India: Percent of Average Seasonal Greenness (3-month)

Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

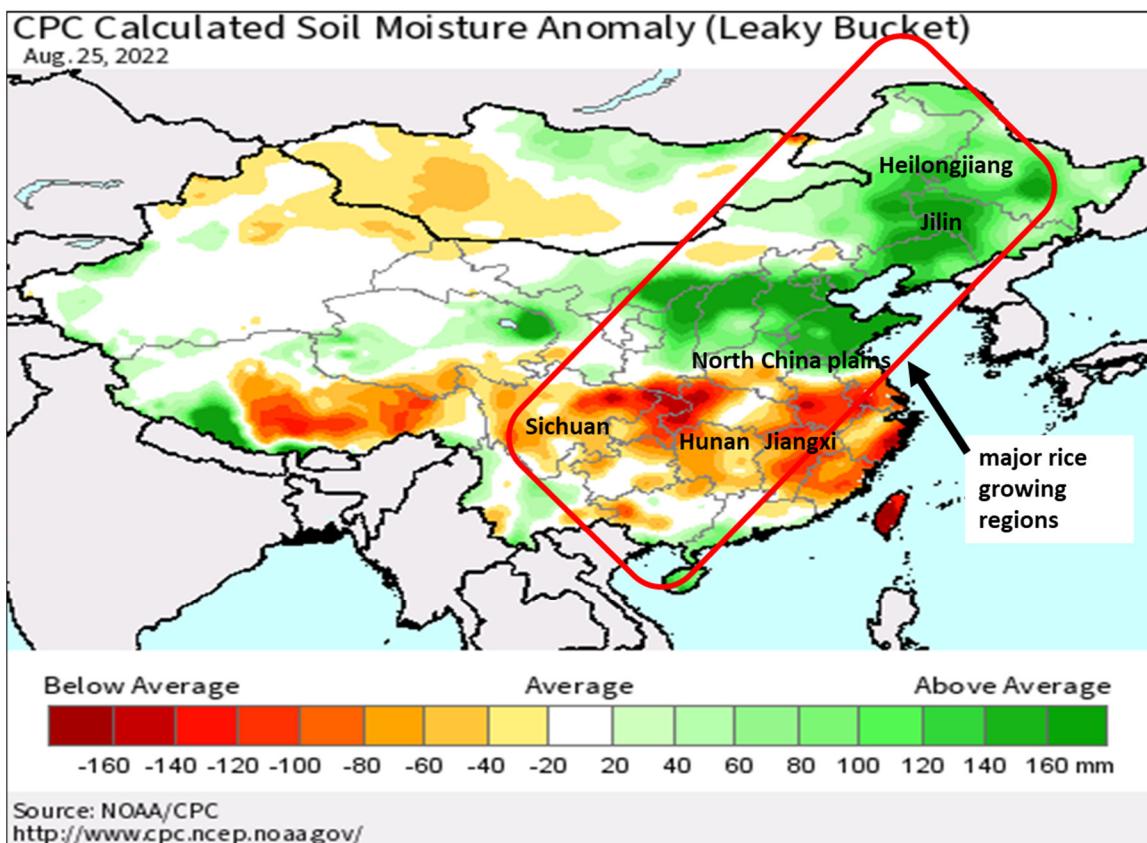

Source: NASA USDA GLAM  
MODIS Imagery

The 2022 Northeast region, which accounts for 30 percent of total *kharif* planting, continues to experience drought-like conditions. Cumulative rainfall from June to August is down 19 percent. In West Bengal and Uttar Pradesh, the largest producers, cumulative rainfall during the monsoon is down 22 percent and 28 percent, respectively. Consequently, satellite-derived Percent of Average Seasonal Greenness indicates crop vigor is below average in West Bengal, with primarily rainfed crops, and average in Uttar Pradesh, which has access to irrigation.

*Kharif* rice, which is approximately 70 percent of total rice production, will be harvested in early November. *Rabi* rice, which accounts for roughly 30 percent of total rice production, will be planted from November to January and will be harvested in late April. (For more information, please contact [Arnella.Trent@usda.gov](mailto:Arnella.Trent@usda.gov))

### China Rice: High Temperatures and Dryness Decrease Production Prospects

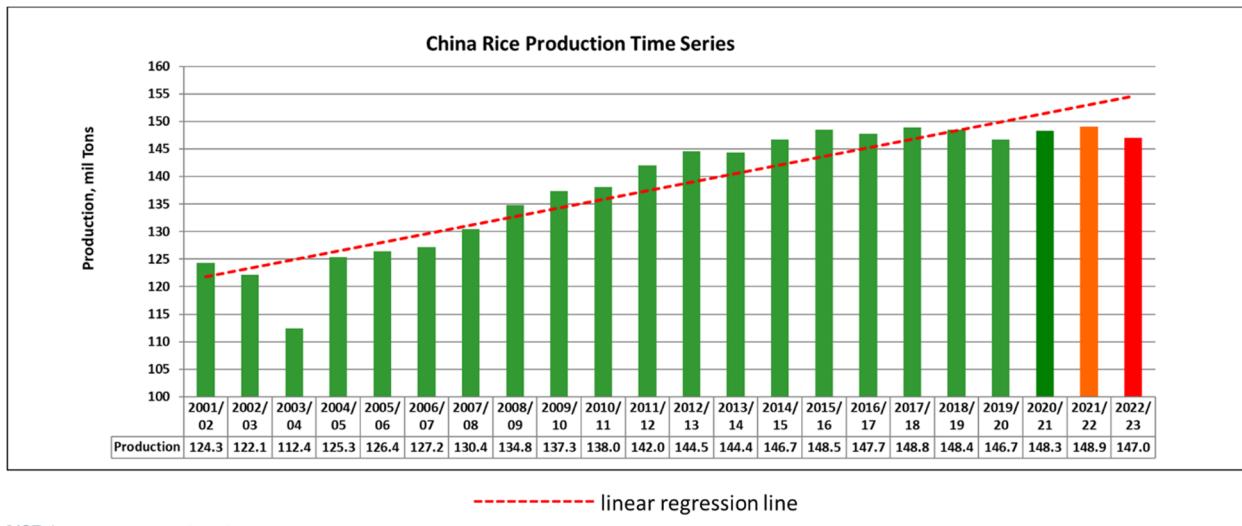

#### China Soil Moisture Conditions

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Source: NOAA CPC

USDA forecasts China's marketing year (MY) 2022/23 rice production at 147.0 million metric tons (mmt) (milled basis), down 1 percent or 2.0 mmt from last month and down 1 percent from last year and from the 5-year average. Area is estimated at 30.0 million hectares (mha), unchanged from last month, up marginally from last year, but down marginally from the 5-year average. Yield (rough) is forecast at 7.00 metric tons per hectare (mt/ha), down 1 percent from last month, 2 percent from last year, and less than 1 percent below the 5-year average of 7.03 mt/ha.

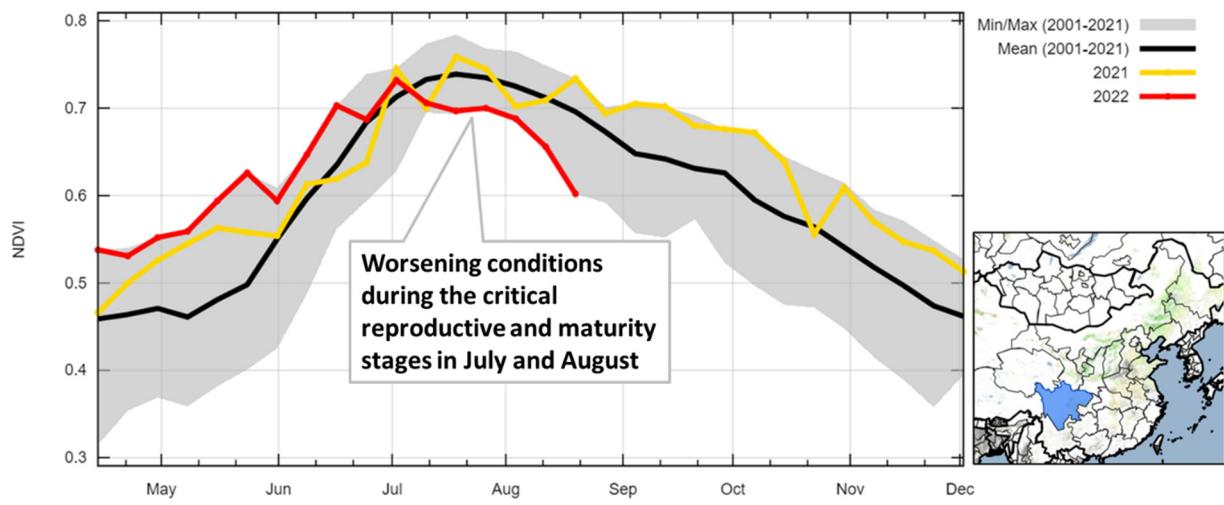

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Source: USDA PSD Online

Unseasonably high temperatures and dry conditions, especially during July and August, in large parts of the lower Yangtze Valley, including Sichuan, Hunan, Jiangxi, Hubei, and Anhui provinces, have stoked fears of yield reductions of single rice crop and the late double rice crop. Dryness has persisted since early July, and soil moisture is significantly below normal for this time of the year across the southern Yangtze valley, a core rice production area. In addition, the Standardized Precipitation Index (SPI) indicates drought is prevalent across most of the southern provinces of the Yangtze Valley, especially in Sichuan, Jiangxi, Anhui, and Hubei. These provinces account for approximately 56 mmt or 39 percent of total China rice.

### Deteriorating 2022 NDVI Curve in Sichuan Province

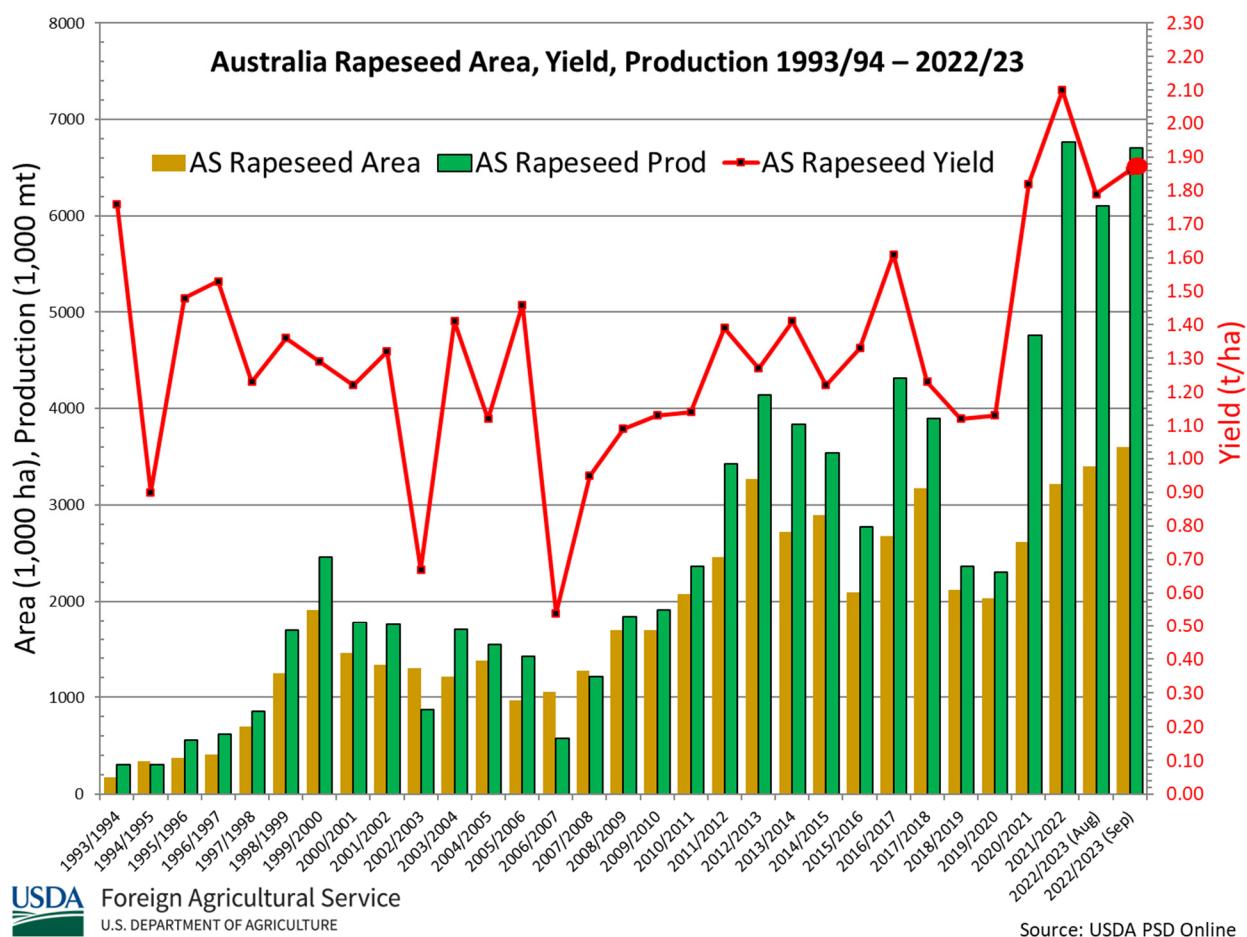

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Source: USDA/NASA Global Agricultural Monitoring (GLAM)  
MODIS Terra 8-day NDVI

China has three rice plantings. The single rice crop accounts for roughly 66 percent of total rice production and is planted from April to June. The early-double rice crop accounts for 16 percent

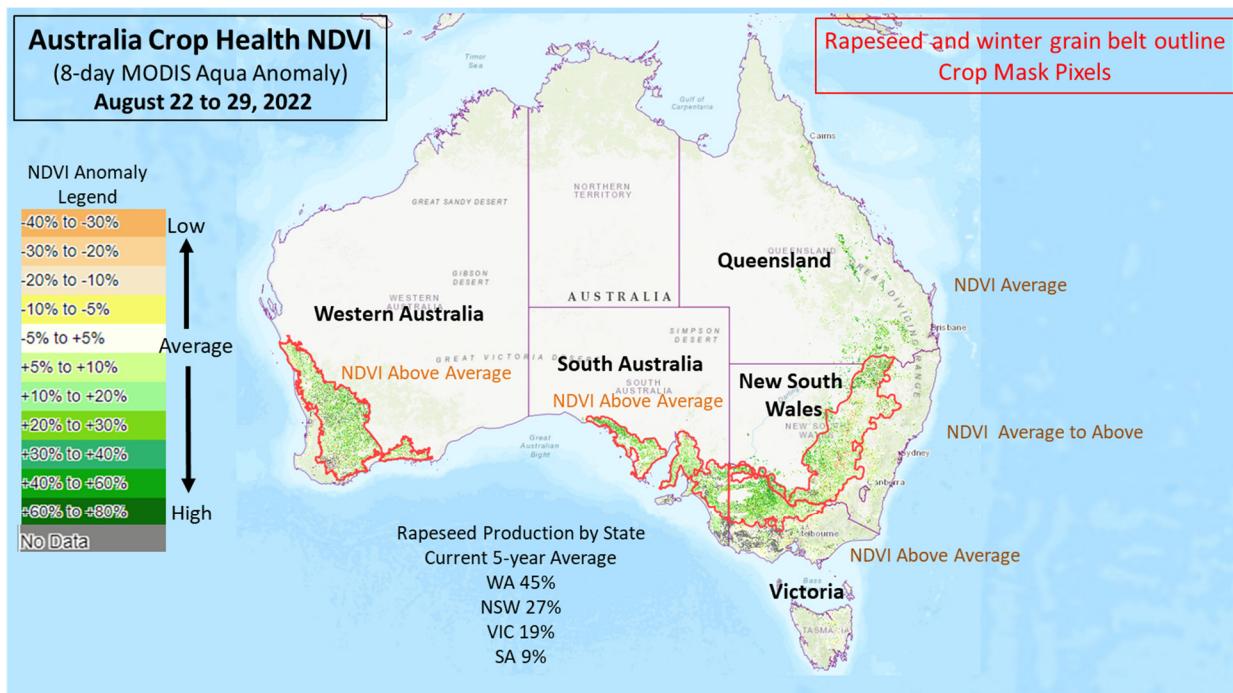

and is planted from April to May. The late-double rice crop accounts for 18 percent and is planted from July to August. Concerns about the impact of high temperatures and drier-than-normal soil moisture conditions are mainly focused on the single and the late-double rice crops. During the July and August period, the single rice crop was in mid-season to advanced physiological-reproductive growth stages, while the late-double rice crop was in the early-season vegetative stage. The drier-than-normal soil moisture conditions also led to planting delays for late-double rice with less than a month left in the optimum planting window. (*For more information, please contact [Dath.Mita@usda.gov](mailto:Dath.Mita@usda.gov).*)

## Australia Rapeseed: Production Near Record

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

USDA forecasts Australia rapeseed production for marketing year (MY) 2022/23 at 6.7 million metric tons (mmt), up 0.6 mmt or 10 percent from last month, but down 62,000 metric tons or less than 1 percent from last year's record. Yield is forecast at 1.86 tons per hectare, up 4 percent from last month, but down 12 percent from last year.

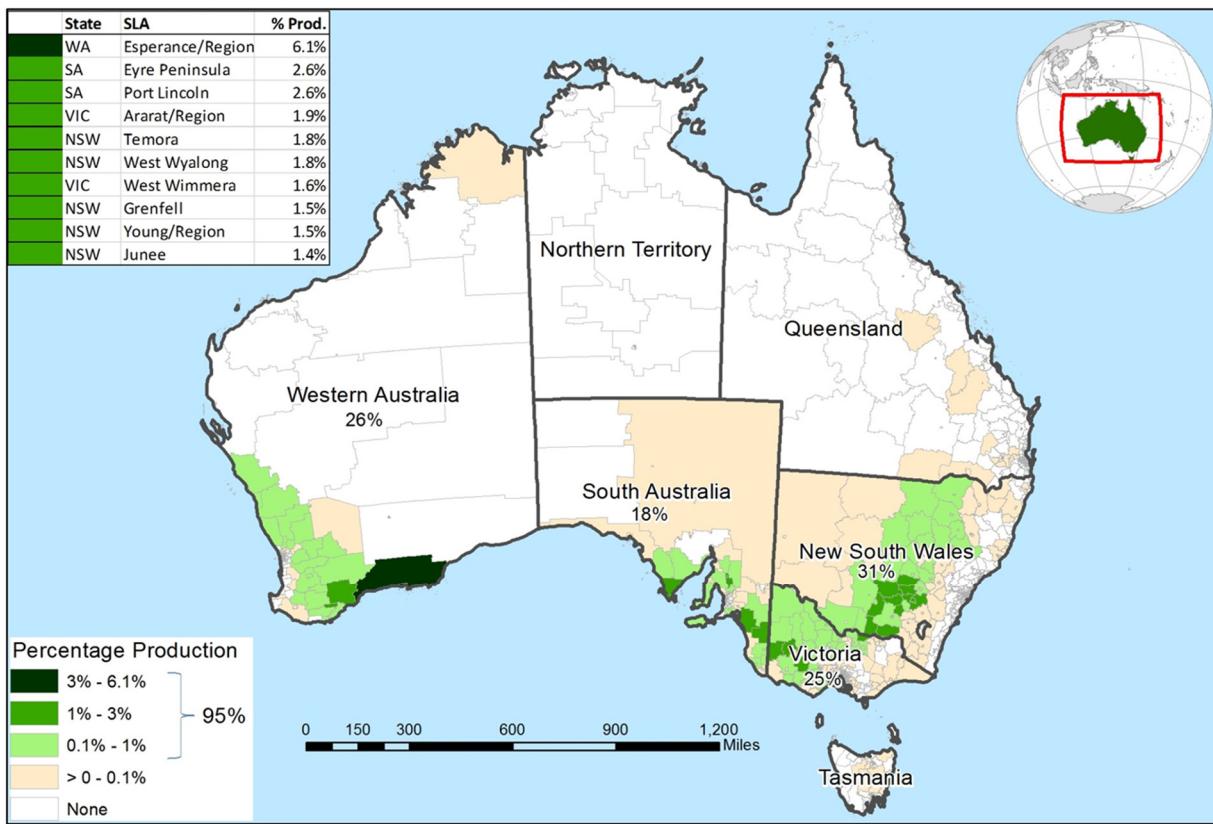

Source: MODIS 8-day NDVI Anomaly Composite (NASA GIMMS),  
GeoCover LandCover 2010 Agricultural Mask

Strong prices supported a record harvested area of 3.6 million hectares and is estimated 12 percent over last season. Above-average rainfall prior to sowing in the two largest producing states of Western Australia and New South Wales provided beneficial soil moisture for planting and throughout germination. Favorable seasonal conditions followed across much of the grain growing regions of Australia. Rapeseed sowing commenced in April and continued into June. Rapeseed is entering the critical flowering crop stage with favorable soil moisture. Harvesting will commence in November and will conclude in December.

## Australia: Rapeseed Production

Data Sources: ABS Ag Census with 2016 SLA boundaries (SA2), Average percent production of MY 2005/06, MY 2010/11, and MY 2015/16; Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES)

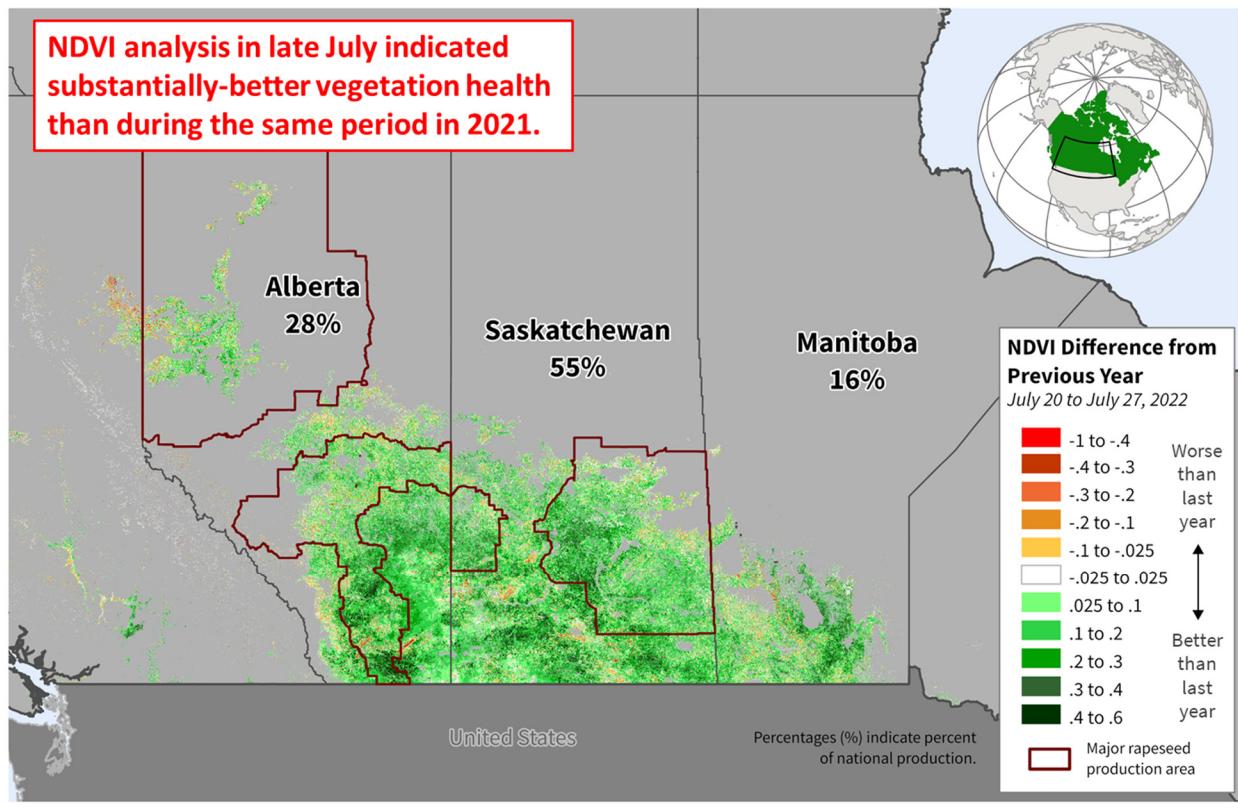

Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

Rapeseed production is distributed across the four main agricultural producing states. Western Australia produces the largest portion of Australia's rapeseed with 45 percent (5-year average) and the remaining production is split among New South Wales (27 percent), Victoria (19 percent) and South Australia (9 percent). (*For more information, please contact [James.Crutchfield@usda.gov](mailto:James.Crutchfield@usda.gov).*)

## Canada Rapeseed: Production Up 45 Percent from Last Year

### Crop Conditions in the Canadian Prairies: 2022 versus 2021

**USDA** Foreign Agricultural Service  
U.S. DEPARTMENT OF AGRICULTURE

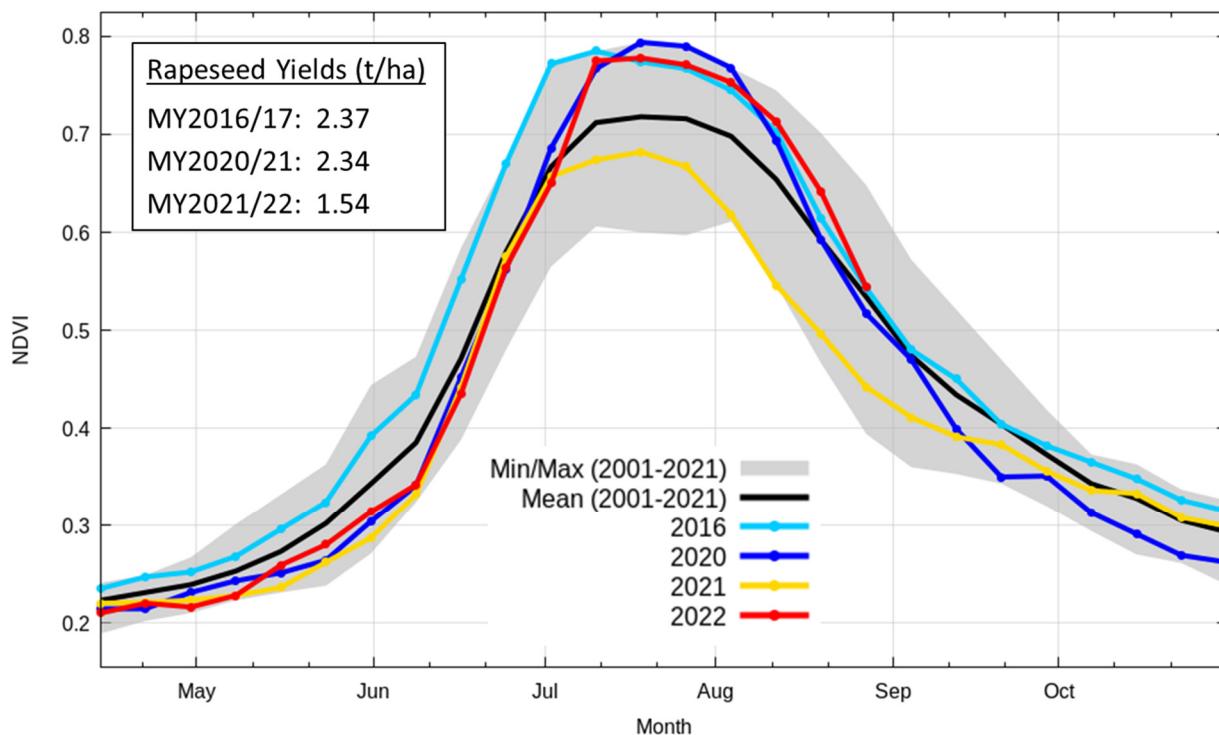

Sources: USDA/NASA, NDVI Difference from Previous Year; Statistics Canada, Estimated Production by Small Area Data (SAD) Region; Agriculture and Agri-Food Canada (AAFC), Annual Crop Inventory 2021 Crop Mask

USDA estimates Canada rapeseed production for marketing year (MY) 2022/23 at 20.0 million metric tons (mmt), unchanged from last month, but up 45 percent from last year and 5 percent above the 5-year average. Harvested area is estimated at 8.6 million hectares, unchanged from last month, but down 4 percent from last year, and 3 percent below the 5-year average. Yield is estimated at 2.33 metric tons per hectare (t/ha), up 51 percent from last year when the Prairies experienced historic drought.

## NDVI 8-Day Time Series

### Rapeseed in Alberta, Saskatchewan, and Manitoba

August 28, 2022

Sources: USDA/NASA Global Agricultural Monitoring (GLAM) MODIS Terra 8-day NDVI; Agriculture and Agri-Food Canada (AAFC), Annual Crop Inventory, 5-Year Average for Rapeseed 2015-2019; Statistics Canada; USDA PSD Online

Crop conditions are substantially improved over last year in the Prairies, and average to near-average yields are anticipated for field crops in the region. USDA estimates the rapeseed yield to be near average (approximately 2.32 t/ha) when omitting the yield from last year's drought-ravaged crop as an outlier. The satellite-derived Normalized Difference Vegetation Index (NDVI) indicates rapeseed crop conditions to be above-average, particularly during the critical reproductive stages throughout July. The NDVI time series graph suggests conditions similar to MY 2020/21, where yield reached 2.34 t/ha. Planting and crop progress delays were widespread during the early part of the season, tempering overall yield potential. However, crop conditions rapidly improved in late June and throughout July, as rainfall and/or warm temperatures arrived where needed. Harvest has begun in all three Prairie provinces and is expected to continue through October. (*For more information, please contact [Aaron.Mulhollen@usda.gov](mailto:Aaron.Mulhollen@usda.gov).*)

The Foreign Agricultural Service (FAS) updates its production, supply and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.

### FAS Reports and Databases:

#### **World Agricultural Production**

Current: <https://www.fas.usda.gov/data/world-agricultural-production>

Archive: <https://usda.library.cornell.edu/concern/publications/5q47rn72z?locale=en>

USDA's Foreign Agricultural Service (FAS) publishes a monthly report on crop acreage, yield and production in major countries worldwide. Sources include reporting from FAS's worldwide offices, official statistics of foreign governments, and analysis of economic data and satellite imagery. The reports reflect official USDA estimates released in the monthly *World Agricultural Supply and Demand Estimates* (WASDE).

#### **World Markets and Trade**

Current: <https://www.fas.usda.gov/data>

Archive:

[https://usda.library.cornell.edu/catalog?1%5Bmember\\_of\\_collections\\_ssim%5D%5B%5D=Foreign+Agricultural+Service&locale=en](https://usda.library.cornell.edu/catalog?1%5Bmember_of_collections_ssim%5D%5B%5D=Foreign+Agricultural+Service&locale=en)

USDA's Foreign Agricultural Service (FAS) publishes monthly and quarterly reports which include data on U.S. and global trade, production, consumption and stocks, as well as analysis of developments affecting world trade in oilseeds, grains, cotton, livestock and poultry. The reports reflect official USDA estimates released in the monthly *World Agricultural Supply and Demand Estimates* (WASDE).

#### **Global Agricultural Information Network (GAIN)**

<https://www.fas.usda.gov/databases/global-agricultural-information-network-gain>

USDA's Foreign Agricultural Service (FAS) provides timely reports on foreign markets through the Global Agriculture Information Network (GAIN) database. An average of 2,000 reports are added each year, with reports going back to 1995. GAIN reports are compiled by FAS' global market intelligence network, which includes FAS foreign service officers and locally engaged staff in over 90 overseas offices world-wide. They provide on-the-ground intelligence, insight, and analysis on nearly 200 countries, delivering information on foreign agricultural markets, crop conditions, and agro-political dynamics of interest to U.S. agriculture. GAIN reports contain assessments of commodity and trade issues made by USDA staff and are not necessarily statements of official U.S. government policy.

#### **Production, Supply and Distribution (PS&D) Online**

<https://apps.fas.usda.gov/psdonline/app/index.html#/app/home>

PSD Online is the public repository for USDA's Official Production, Supply and Distribution forecast data and reports for key agricultural commodities. PSD Online data are reviewed and updated monthly by an interagency committee chaired by USDA's World Agricultural Outlook Board (WAOB). The committee consist of representatives from Foreign Agricultural Service (FAS), the Economic Research Service (ERS), the Farm Service Agency (FSA), and the Agricultural Marketing Service (AMS).

#### **EU Countries and Russia Wheat: Area and Production Estimates**

<https://apps.fas.usda.gov/psdonline/app/index.html#/app/downloads> (click on PSD Datasets)

USDA's Foreign Agricultural Service (FAS) provides country-level area and production estimates for the nations of the European Union. For Russia, country-level area and production estimates are provided for Winter and Spring wheat. These datasets are reviewed and updated monthly by an interagency committee chaired by USDA's World Agricultural Outlook Board (WAOB) and can be downloaded through PSD datasets on PSD Online.

## FAS Reports and Databases:

### International Production Assessment (IPAD)

<https://ipad.fas.usda.gov/>

USDA's Foreign Agricultural Service (FAS) maintains a dynamic global crop production portal with key information including *World Agricultural Production* (WAP) briefs, Commodity Intelligence Reports (CIR), geospatial applications, crop production maps at a subnational level and crop calendars for the top-20 producing countries. Additionally, Crop Explorer (<https://ipad.fas.usda.gov/cropexplorer/>) displays rainfall, temperature, evapotranspiration, soil moisture, snow cover, and vegetation conditions in charts and maps.

### USDA and NASA Global Agricultural Monitoring (GLAM)

<https://glam1.gsfc.nasa.gov/>

The USDA and NASA Global Agricultural Monitoring (GLAM) system provides near real-time and science quality Moderate Resolution Imaging Spectroradiometer (MODIS) Normalized Difference Vegetation Index (NDVI) from the satellites Terra and Aqua. The public can view and retrieve MODIS 8-day composited, global NDVI satellite imagery and time series data. GLAM was developed by NASA's Global Inventory Modeling and Mapping Studies (GIMMS) group for USDA's Foreign Agricultural Service.

### Global Agricultural and Disaster Assessment System (GADAS)

<https://geo.fas.usda.gov/GADAS/index.html>

USDA's Foreign Agricultural Service (FAS) provides the Global Agricultural and Disaster Assessment System (GADAS), a web-based Geographic Information System (GIS) tool which integrates a vast array of highly detailed earth observation data streams, particularly targeted towards agricultural and disaster assessment analysis. GADAS is an interactive website which provides analysts with a wide variety of routine geospatial products (maps, charts, tables) they require for comprehensive situational investigations and recurring assessments.

### Export Sales Reporting

<https://apps.fas.usda.gov/esrquery/>

USDA's Export Sales Reporting Program monitors U.S. agricultural export sales on a daily and weekly basis. Export sales reporting provides a constant stream of up-to-date market information for 40 U.S. agricultural commodities sold abroad. The weekly U.S. Export Sales report is the most currently available source of U.S. exports sales data. The data is used to analyze overall levels of export demand, determine where markets exit, and assess the relative position of U.S. commodities in foreign markets.

### Global Agricultural Trade System (GATS)

<https://apps.fas.usda.gov/gats/default.aspx>

The Global Agricultural Trade System (GATS) is a searchable database containing monthly U.S. Census Bureau trade data organized by agricultural commodity and agricultural related product groups. Trade data is searchable by partner countries and partner groups. Historical U.S. agricultural trade data is available back to 1967. In addition, U.N. trade statistics (UN Comtrade) may be queried through GATS. UN trade data is available for nearly 200 countries or areas, dating from the inception of the Harmonized System (HS) of trade codes in 1989 to present. The database is continuously updated. U.S. trade data is updated monthly according to the U.S. Census Bureau's reporting system. UN Comtrade data are updated in GATS after nationally submitted data to the UN are standardized by the UN Statistical Division and added to the UN Comtrade database.

**TABLE 18**

The table below presents a record of the September projection and the final Estimate. Using world wheat production as an example, the "root mean square error" means that chances are 2 out of 3 that the current forecast will not be above or below the final estimate by more than 1.9 percent. Chances are 9 out of 10 (90% confidence level) that the difference will not exceed 3.2 percent. The average difference between the September projection and the final estimate is 8.5 million tons, ranging from 0.9 million to 30.7 million tons. The September projection has been below the estimate 26 times and above 15 times.
