# World Agricultural Production

## Australia Wheat: Production Increased to the Third Highest on Record

USDA estimates Australia wheat production for marketing year 2024/25 at 34.1 million metric tons, up 7 percent from last month, 31 percent from last year and 14 percent from the 5-year average. Harvested area is estimated at 13.1 million hectares, up slightly from last month, 6 percent from last year and 8 percent above the 5-year average. Yield is estimated at 2.61 metric tons per hectare, up 6 percent from last month, 24 percent from last year and 8 percent above the 5-year average. The revisions were made based on the recently released official government estimates from the Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES).

**Wheat in Southern New South Wales, Australia**  
**September 12, 2024**

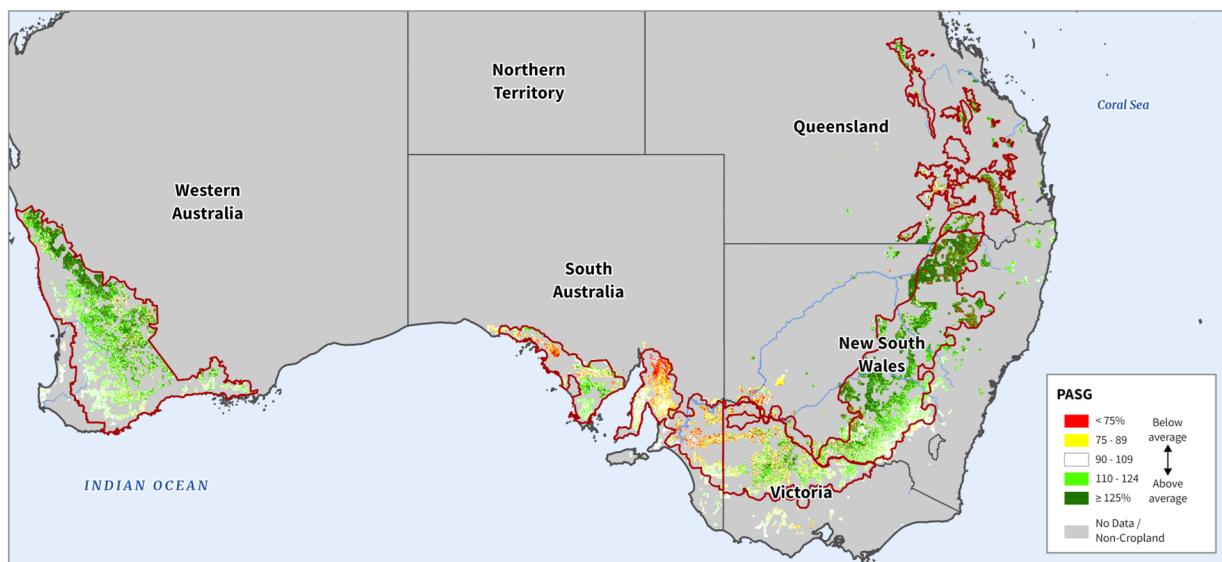

Approved by the World Agricultural Outlook Board

This year's production is the third highest on record as yields exceeded previous estimates as harvest progressed. The recent ABARES report states that grain receival data indicates yields were better than expected particularly in Western Australia and New South Wales, which comprises over 60 percent of total production. In September 2024, FAS/Canberra observed the wheat crop to be in good condition in southern New South Wales.

New South Wales started the season with favorable subsoil moisture, which benefited crop establishment whereas Western Australia, South Australia and Victoria all started the season with dry conditions. Despite the dry start, there was improved rainfall during the growing season, which provided favorable conditions during the critical grain fill period, boosting yields. At the end of the grain fill period, the Percent of Average Seasonal Greenness (PASG) showed above-average crop vigor in the major wheat growing regions.

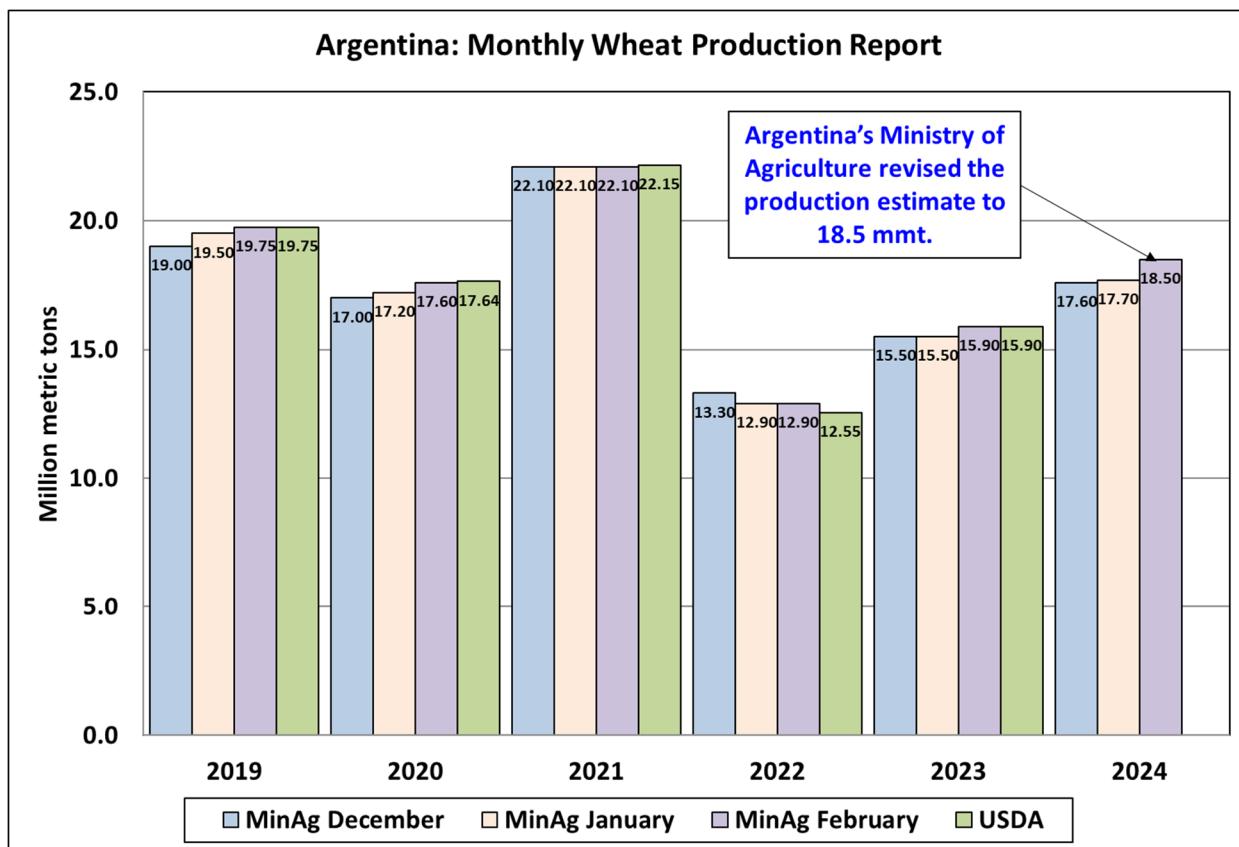

**Australia: Wheat Belt Percent of Average Seasonal Greenness (PASG)**  
September 5 to October 6, 2024 (1-Month)

Wheat is a winter crop in Australia. Generally, planting commences in April and harvest begins in October. (*For more information, please contact [Shannon.Moyo@usda.gov](mailto:Shannon.Moyo@usda.gov).*)

### Argentina Wheat: Harvest Complete and Production Up 17 Percent from Last Year

Argentina wheat production for marketing year 2024/25 is estimated at 18.5 million metric tons, up 5 percent from last month and 17 percent from last year. Wheat yield is estimated at 3.03 tons per hectare (t/ha), up 3 percent from last month and 7 percent from last year's yield. Harvested area is estimated at 6.1 million hectares, up 2 percent from last month and 9 percent from last year.

**Source: Argentina Ministry of Agriculture**

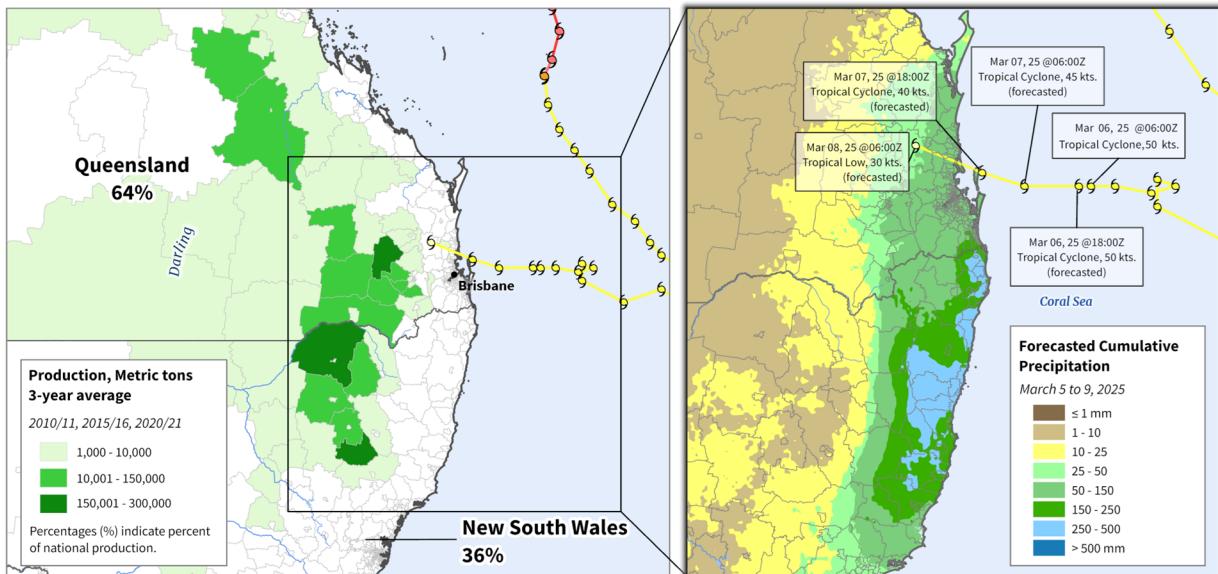

Wheat harvest finished in January. The Argentina Ministry of Agriculture recently published an updated monthly report, which revised the production estimate. Based on the report, higher planted area occurred in northern Buenos Aires, southern Santa Fe and southern Córdoba. In the monthly reports, the Ministry of Agriculture does not publish harvested yield information. Typically, yield data published by *Bolsa de Cereales de Buenos Aires* is similar to the Ministry of Agriculture's final harvested yield estimate. As of January, when harvest was complete, *Bolsa Cereales* projected yield at 3.04 t/ha. (For more information, please contact [Katie.McGaughey@usda.gov](mailto:Katie.McGaughey@usda.gov).)

### Australia Sorghum: Production Increased Resulting in Second Highest Yield in 10 Years

USDA forecasts Australia sorghum production for marketing year 2024/25 at 2.3 million metric tons, up 10 percent from last month, 5 percent from last year and 21 percent above the 5-year average. Harvested area is forecast at 570,000 hectares, unchanged from last month, down 5 percent from last year and 6 percent above the 5-year average. Yield is forecast at 4.04 metric tons per hectare, up 10 percent from last month and last year, and 22 percent above the 5-year average.

Sorghum is mainly planted in the eastern Australian states of Queensland and New South Wales. Throughout this summer's growing season there have been favorable conditions for sorghum, which has resulted in the second highest yield in the past 10 years. Currently, Tropical Cyclone Alfred is threatening Queensland. This storm is tracking inland on a westward path and could bring precipitation and wind toward the sorghum growing area. However, based on the current rainfall forecast, the heavy precipitation will mainly affect the coastal region.

## Australia: Sorghum Production Areas and Tropical Cyclone Alfred

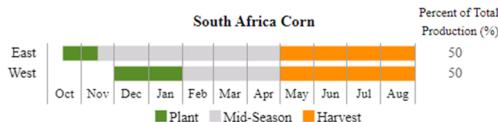

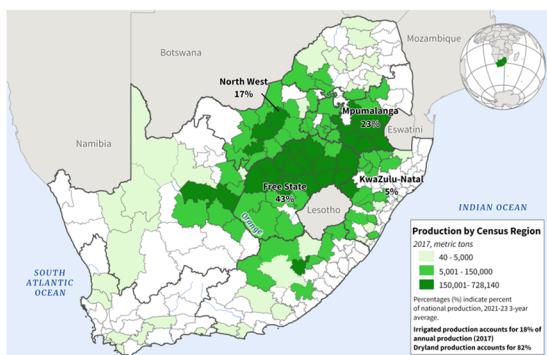

Source: Australian Bureau of Statistics, Agricultural Censuses of 2010/11, 2015/16, and 2020/21 (2021 SA2 Boundaries); CHIRPS Forecasted Cumulative Precipitation (5-Days, Mar 5 to Mar 9, 2025); National Hurricane Center (NHC), Central Pacific Hurricane Center, and Joint Typhoon Warning Center (JTWC). Additional post-processing and value added by NOAA/NESDIS/STAR/RAMMB and CIRA.

Sorghum can be planted from September through the end of January and harvest begins in March for the early planted crop and goes through June. (*For more information, please contact [Shannon.Moyo@usda.gov](mailto:Shannon.Moyo@usda.gov).*)

## South Africa Corn: Beneficial La Niña Rains in February Mitigated Dry Spell

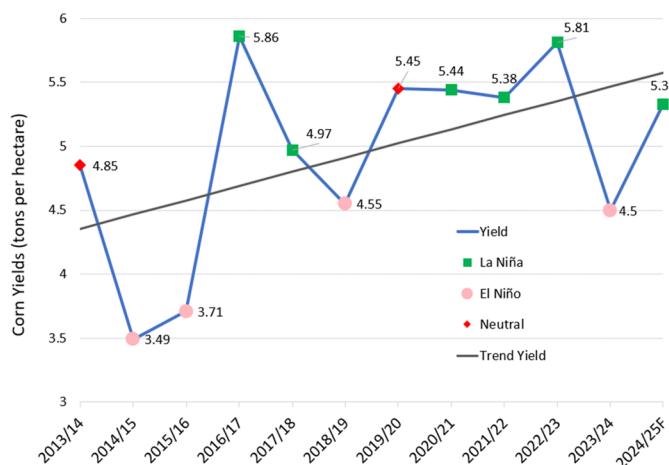

South Africa's marketing year (MY) 2024/25 corn production is forecast at 16.0 million metric tons (mmt), down 1.0 mmt (6 percent) from last month, but up 2.6 mmt (19 percent) from last year. The USDA production forecast includes output from both developing and commercial sectors, with the commercial sector accounting for approximately 96 percent of the total output. Harvested area is estimated at 3.0 million hectares, down 150,000 ha (5 percent) from last month and nearly the same area as last year. Yield is forecast at 5.33 metric tons per hectare, down 1 percent from last month, nearly equal to the 5-year average, and up 19 percent from last year's El Niño drought.

## South Africa Corn Production

**Source:** Province-level Corn Production Statistics from South Africa Crop Estimates, Department of Agriculture, Land Reform, and Rural Development, 2023. District-level Production from South Africa Census of Commercial Agriculture, 2017.

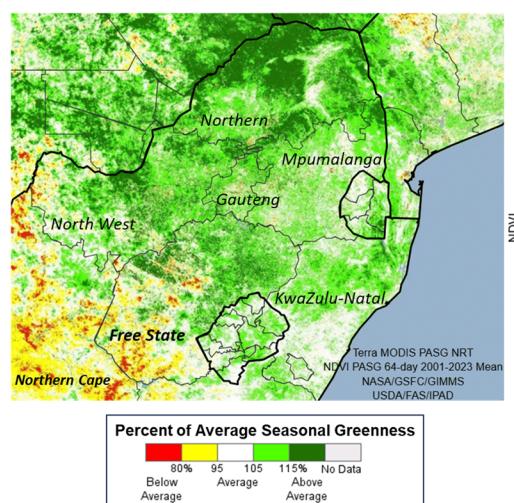

## South Africa Corn Yields

**Sources:** El Niño and La Niña years defined by NOAA's Oceanic Niño Index (ONI). Crop yields from PSD Online, March 2025.

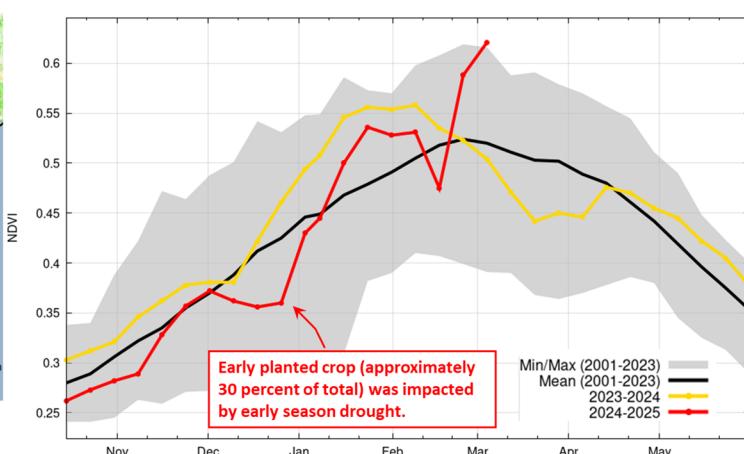

FAS/Pretoria traveled in South Africa's primary producing provinces in early March and interviewed representatives from the major grain cooperatives. They reported that early planted crops (approximately 30 percent) suffered from a dry spell from mid-November through mid-December, but beneficial La Niña rains in January and February boosted yield potential to nearly average. Crop conditions for the late planted crop (approximately 70 percent) was observed in early March to range from average to above average. Satellite-derived Normalized Difference Vegetation Index (NDVI) and the Percent of Average Seasonal Greenness (PASG) indices also confirmed dry spells from mid-November through mid-December, but beneficial January and February rains boosted yield potential ranging from average to above-average.

### Percent of Average Seasonal Greenness (PASG) (January 1 through March 5, 2025)

**Source:** USDA-NASA Global Agricultural Monitoring (GLAM); PASG-MODIS and NDVI-MODIS (250-meters) measurements are from the Terra satellite.

### Cropland NDVI-MODIS Measurements (October 1, 2024 through March 5, 2025)

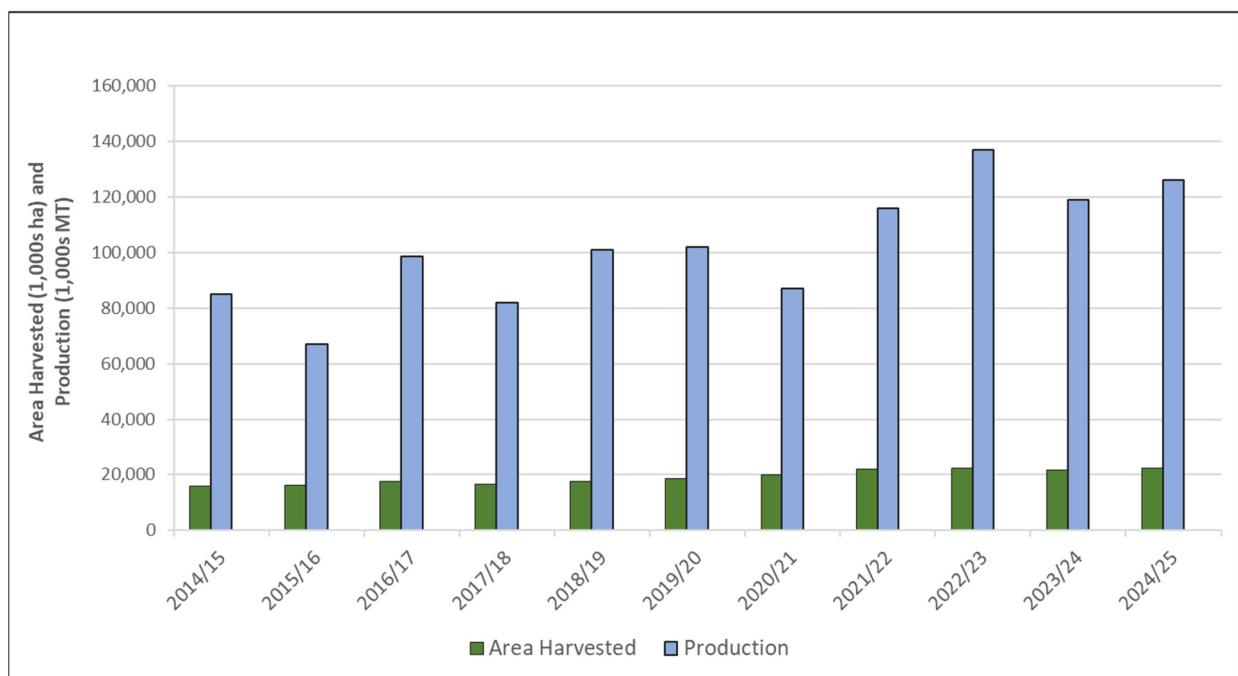

**Source:** Primary corn producing provinces include Free State (43 percent of total production); Mpumalanga (23 percent); and North West (17 percent).

South Africa's primary corn producing provinces in order of estimated MY 2024/25 production include: Free State (43 percent of total production), Mpumalanga (23 percent), North West (17 percent), and KwaZulu-Natal (5 percent). The planting season in the east is from late October through November, and the planting season in the west is from late November to early January. South African farmers will harvest the corn crop from April through September, and the bulk of the harvest (87 percent) is typically delivered to the silos from May through August. (*For more information, please contact [Curt.Reynolds@usda.gov](mailto:Curt.Reynolds@usda.gov).*)

### Brazil Corn: MY 2023/24 Production and Yield Revised Down

USDA estimates Brazil corn production for marketing year (MY) 2023/24 at 119.0 million metric tons (mmt), down 2 percent from last month and 13 percent from MY 2022/23, but 6 percent above the 5-year average. Harvested area is estimated at 21.7 million hectares, up 1 percent from last month but down 3 percent from MY 2022/23. Harvested area for MY 2023/24 is, however, 4 percent above the 5-year average. Yield is estimated at 5.50 tons per hectare, down 3 percent from last month and 10 percent from MY 2022/23 but more than 2 percent above the 5-year average.

#### Brazil Corn: Harvested Area & Production

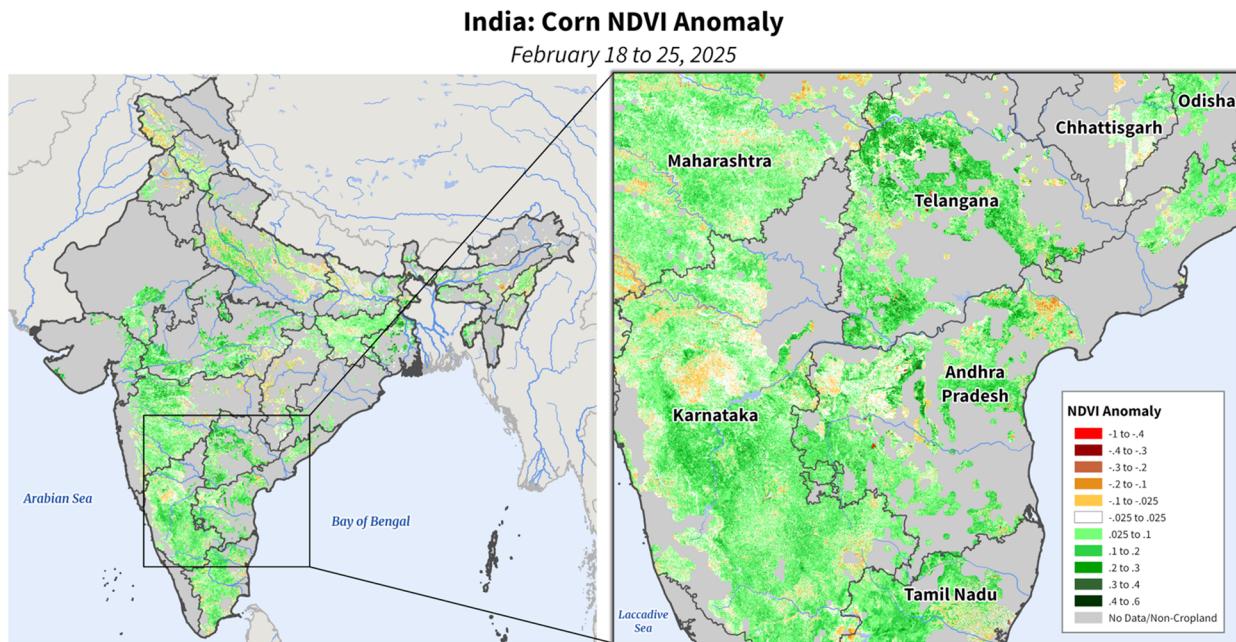

Source: USDA PSD Online

Updated utilization data has indicated lower corn production in Brazil in MY 2023/24; USDA's corn estimate is revised down 3.0 mmt. Yield was also revised lower, reflecting this lower production. (*For more information, please contact [Aaron.Mulhollen@usda.gov](mailto:Aaron.Mulhollen@usda.gov).*)

## India Corn: Record Production and Yield

USDA estimates marketing year 2024/25 India corn production at a record 40.0 million metric tons, up 5 percent from last month and 6 percent from last year due to ideal growing conditions. Harvested area is estimated at 11.2 million hectares, up 4 percent from last month, but down slightly from last year. Yield is estimated at a record 3.57 metric tons per hectare, up 2 percent from last month and 7 percent from last year.

Source: MODIS NDVI Difference from Normal (8-Days, Feb 18 to Feb 25, 2025);  
IFPRI Spatial Production Allocation Model (SPAM) 10km 2020 Corn Mask

Corn is grown in three seasons: *kharif* (accounting for 70 percent of the total production), *rabi*, and *summer*. Planting for the *kharif* crop starts with the onset of the southwest monsoon in June and planting for the *rabi* crop starts in November. *Rabi* corn is predominantly grown on irrigated fields. The Ministry of Agriculture reported planting progress (February 28) is up 15 percent from the same period last year because of strong domestic prices. The *rabi* crop progressed under ideal growing conditions because of adequate irrigation. The satellite-derived Normalized Difference Vegetation Index (NDVI) shows crop vigor to be above average. The corn crop is currently at the tasseling stage. Harvest should begin in late March for the *rabi* crop. *Summer* season planting has started. (*For more information, please contact [Arnella.Trent@usda.gov](mailto:Arnella.Trent@usda.gov).*)

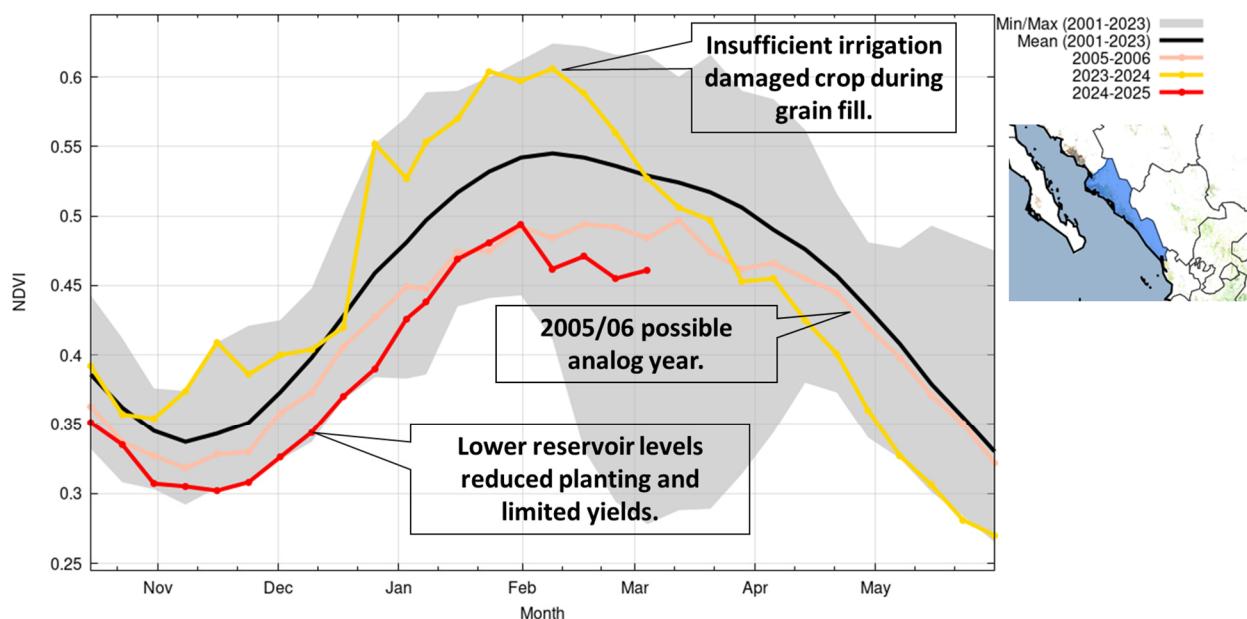

## Mexico Corn: Yield Declines due to Drought in Northwest

USDA estimates Mexico corn production for marketing year 2024/25 at 23.3 million metric tons, down 400,000 metric tons or 2 percent from last month, 1 percent from last year, and 12 percent from the 5-year average. Harvested area is estimated at 6.4 million hectares, up 250,000 hectares or 4 percent from last month and last year, but down 6 percent from the 5-year average. Yield is estimated at 3.67 tons per hectare (t/ha), down 6 percent from last month, 5 percent from last year's drought-affected crop, and 6 percent from the 5-year average.

Mexico corn has two seasons, a spring/summer season, followed by a fall/winter season. Area has increased based on harvested area reports for the spring/summer crop and yield has declined due to poor conditions for the fall/winter corn crop.

The predominantly rainfed spring/summer corn crop is typically 70 percent of annual production. For this season, the largest harvested area is from the state of Chiapas and estimated similar to last year, whereas 15 states of Mexico – especially Oaxaca, Michoacán, and Guanajuato – are estimated greater than last year, according to Mexico's Agri-Food and Fisheries Information Service (SIAP). Once the rains began in late June, the improved soil moisture supported the farmers in sowing more corn than last year's spring/summer season. Harvest completed in February for this season.

## Mexico: Winter Corn NDVI in Sinaloa

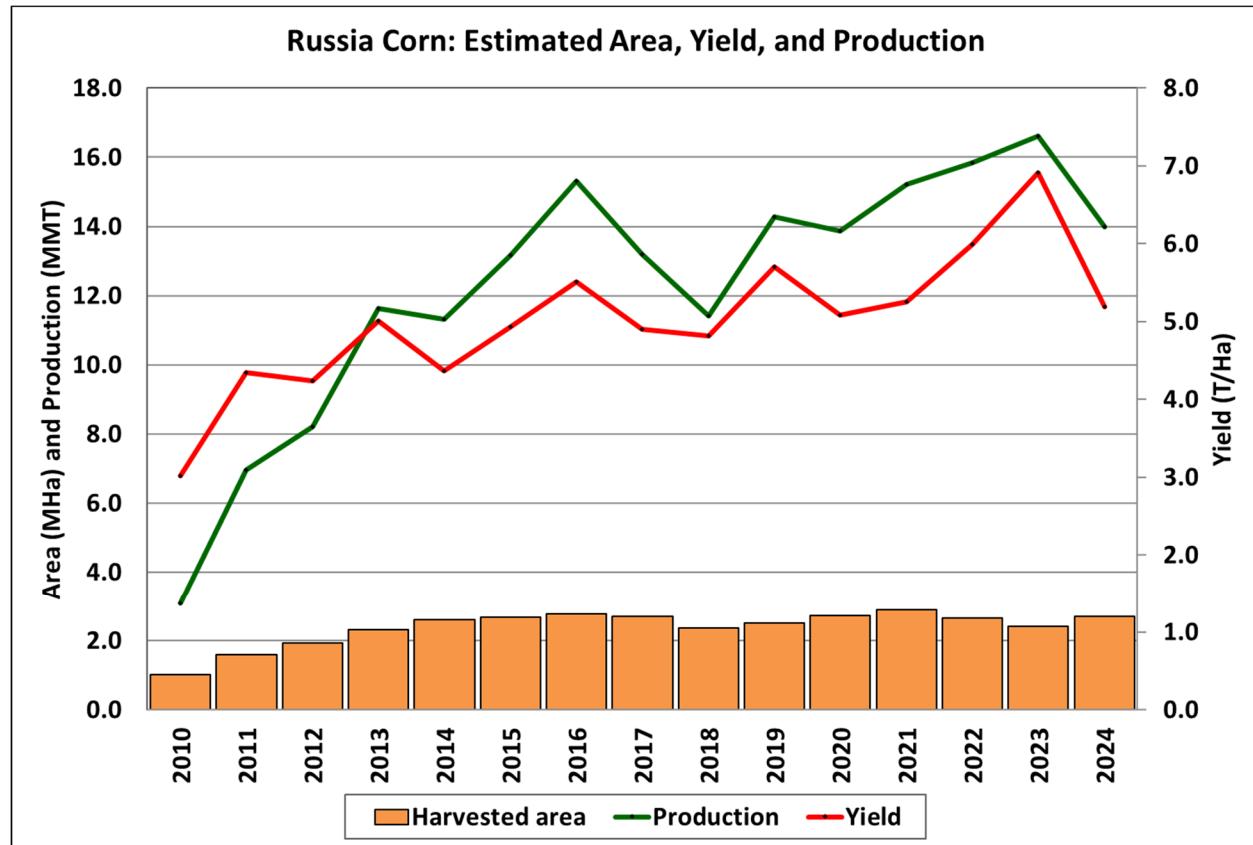

Source: NASA/USDA Global Agricultural Monitor (GLAM) MODIS Terra (250 m) NDVI, ESA World Cover 2020 crop mask.

In contrast, conditions for fall/winter corn are poor. The fall/winter corn season typically accounts for 30 percent of annual production, with 68 to 72 percent from Sinaloa. Farmers in Sinaloa are expected to have planted 200,000 hectares of winter corn according to in-country sources. These area estimates are less than last year because of low reservoir levels due to persistent dryness and high temperatures. Farmers typically relied on four irrigation cycles during the growing season. Last year, some farmers managed to irrigate three times. This year, farmers are only using reservoir water once and some are pumping ground water to get the second irrigation cycle, leading to expectations for sub-optimal yields. Typically, the irrigated corn of Sinaloa yields 12.00 t/ha. This year, the satellite-derived Normalized Difference Vegetation Index (NDVI) indicates less-than-ideal crop vigor. Thus far, this NDVI curve is most similar to the one observed in 2006, when Sinaloa's winter corn yield was 9.83 t/ha according to SIAP. For the fall/winter crop, planting began in November and harvest is from mid-April through July. (*For more information, please contact [Lisa.Colson@usda.gov](mailto:Lisa.Colson@usda.gov).*)

## Russia Corn: Production Up Month-to-Month, but Down 16 Percent from Last Year

Russia corn production for marketing year 2024/25 is estimated at 14.0 million metric tons, up 6 percent from last month, but down 16 percent from last year and 8 percent from the 5-year average. Yield is estimated at 5.19 tons per hectare, up 2 percent from last month, but down 25 percent from last year and 10 percent from the 5-year average. Harvested area is estimated at 2.7 million hectares, up 4 percent from last month, 13 percent from last year, and 2 percent from the 5-year average.

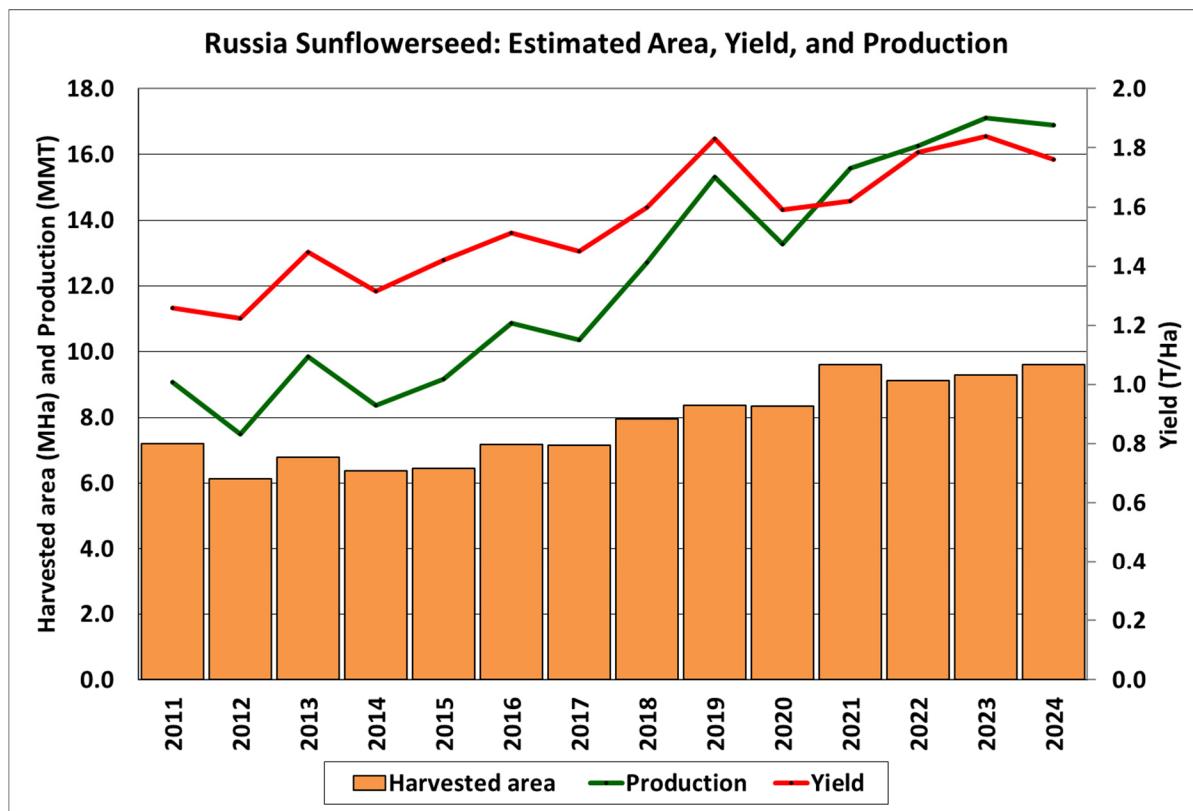

Source: USDA PSD Online

Russia's Statistical Agency, Rosstat, released its final data for all major crops harvested in 2024. The reported corn production increase is primarily yield-driven. Rosstat increased its yield for corn relative to the preliminary estimate released in December of 2024. This season, Russia's main corn producing regions experienced overall unfavorable weather conditions. Inadequate precipitation and higher-than-normal temperatures during the key yield formation stages hampered crop development and caused a year-over-year decline in yield, which is reflected in Rosstat's final data. Rosstat's data do not reflect the occupied territories of Ukraine, including Donetsk People's Republic, Lugansk People's Republic, Zaporozhye and Kherson regions. USDA crop production estimates for Russia exclude estimated output from Crimea. (*For more information, please contact [Iliana.Mladenova@usda.gov](mailto:Iliana.Mladenova@usda.gov).*)

## Russia Sunflowerseed: Upward Production Revision Based on Rosstat's Final Report

Russia sunflowerseed production for marketing year 2024/25 is estimated at 16.9 million metric tons, up 2 percent from last month, but down 1 percent from last year. Yield is estimated at 1.76 tons per hectare, unchanged from last month and down 4 percent from last year. Harvested area is estimated at 9.6 million hectares, up 2 percent from last month and 3 percent from last year.

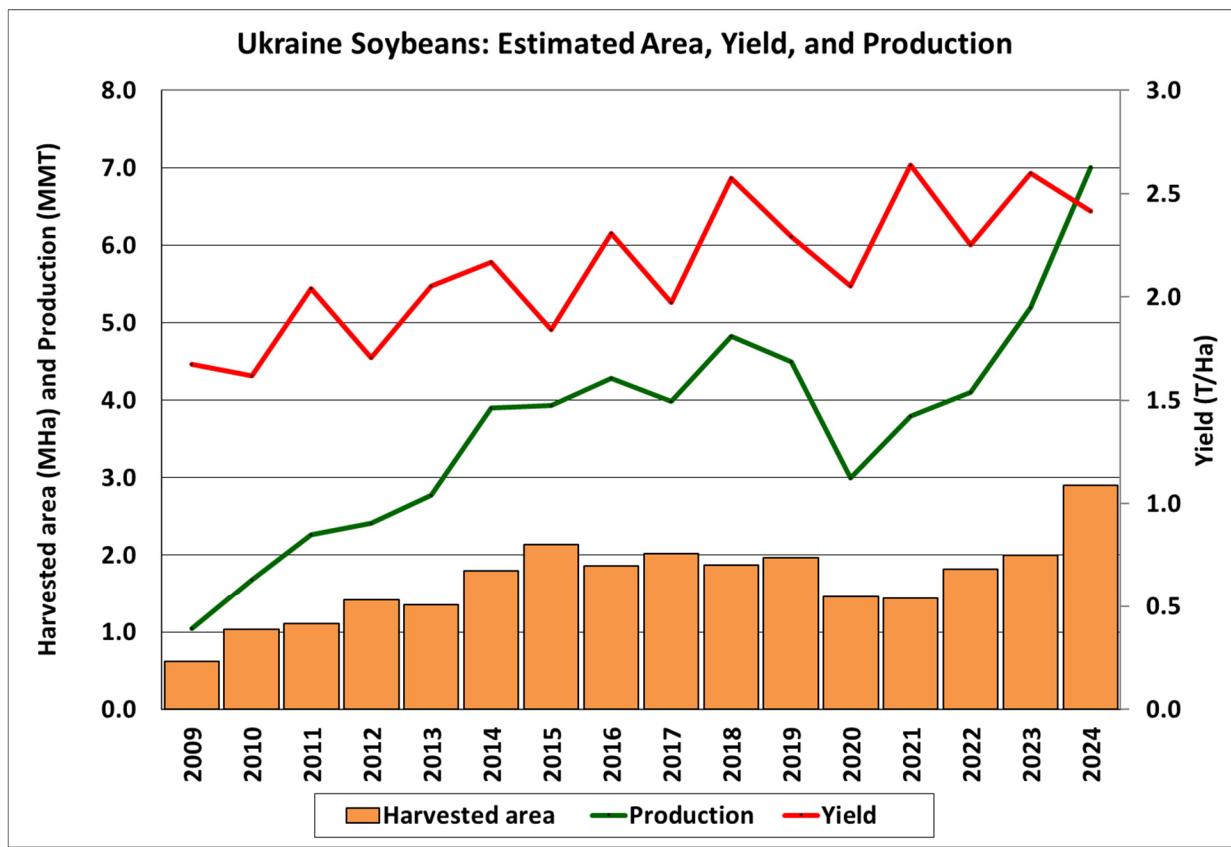

Source: USDA PSD Online

Russia's Statistical Agency, Rosstat, released its final data for all major crops harvested in 2024. Based on official data, this season's production and harvested area are the second highest on record. Despite the year-over-year reduction in yield, which was expected given the overall unfavorable weather this summer, production remained above the 5-year average by 9 percent owing largely to the increase in harvested area. Rosstat's data do not reflect the occupied territories of Ukraine, including Donetsk People's Republic, Lugansk People's Republic, Zaporozhye and Kherson regions. USDA crop production estimates for Russia exclude estimated output from Crimea. (For more information, please contact [Iliana.Mladenova@usda.gov](mailto:Iliana.Mladenova@usda.gov).)

## Ukraine Soybeans: Record Production up 70 percent Above 5-Year Average

Ukraine soybean production for marketing year (MY) 2024/25 is estimated at 7.0 million metric tons, up 6 percent from last month and 35 percent from last year. Yield is estimated at 2.41 tons per hectare, up 6 percent from last month, but down 7 percent from last year. Harvested area is estimated at 2.9 million hectares, unchanged from last month and up 45 percent from last year. This season's production and harvested area are records, surpassing the 5-year average by 70 percent and 67 percent, respectively.

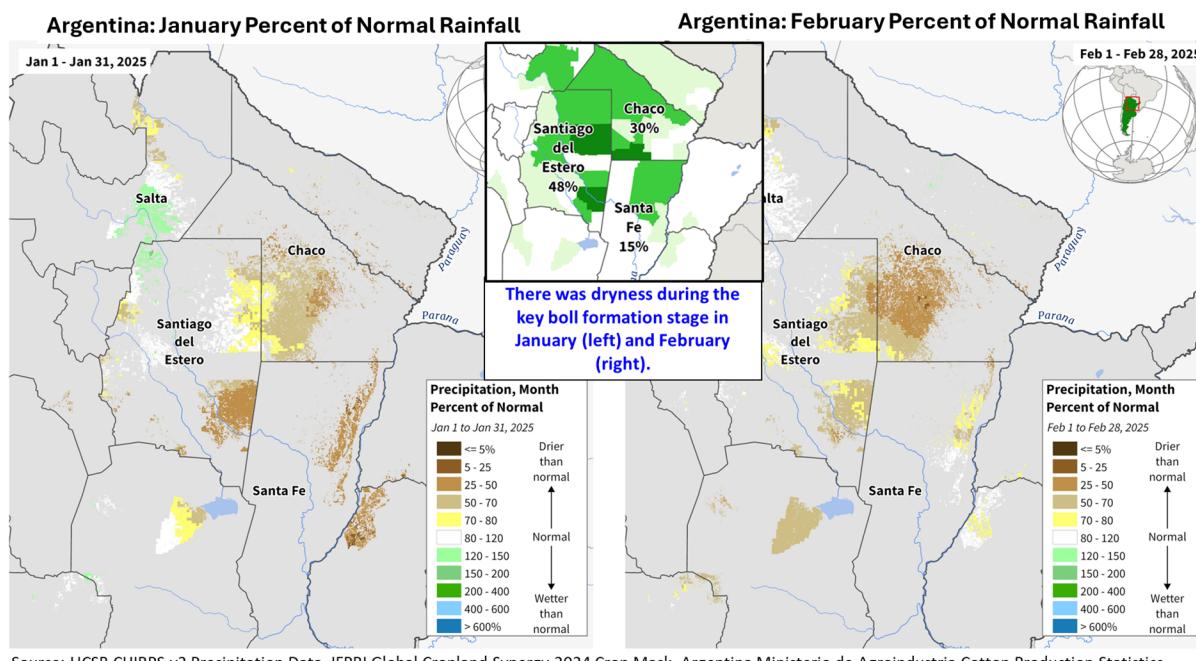

Sources: USDA PSD Online

At present, Ukraine can be divided into two zones, areas in conflict and areas not in conflict. As elaborated by FAS/Kyiv, due to the ongoing war there is no official and reliable information about the status of Ukraine's agriculture in the conflict zone. As a result, area and production data currently provided by FAS/Kyiv, Ukraine's Ministry of Agriculture (MinAg) and the State Statistical Service of Ukraine, which inform USDA's forecasts, do not reflect the whole country. For the MY 2024/25 season, the MinAg operational field data for both the MY 2024/25 winter and spring crops excludes the currently occupied territory of Ukraine, including the Donetsk, Zaporizhzhia, Luhansk and Kherson regions. MinAg also does not include Crimea. USDA crop production estimates for Ukraine include estimated output from Crimea. Crimean area and production numbers are extracted from the agricultural crop reports provided by the Russian Statistical Agency, Rosstat.

Despite the challenges imposed by the ongoing conflict, Ukraine's soybean production substantially expanded this year. This month's area and yield adjustments are made based on operational estimates and alternative data resources indicating better crop returns than initially forecasted. Historically, oilseeds have offered a better return on investment compared to grains. Export limitations and increases in transportation costs were some of the main factors that lowered the traditionally higher profits of oilseeds. As explained by FAS/Kyiv, farmers faced losses for all bulk commodities, including sunflowerseed, except for soybeans during the first two years after the start of the war. This consequently motivated the Ukrainian farmers to increase soybean area in 2024, which resulted in record production despite the year-over-year yield reduction. USDA crop production estimates for Ukraine include estimated output from Crimea. (*For more information, please contact [Iliana.Mladenova@usda.gov](mailto:Iliana.Mladenova@usda.gov).*)

## Argentina Cotton: Dryness During January and February Caused Drop in Yield

Argentina cotton production for marketing year 2024/25 is forecast at 1,675 480-pound bales, down 3 percent from last month, but up 2 percent from last year. Cotton yield is forecast at 608 kilograms per hectare, down 3 percent from last month, but up 5 percent from last year's yield. Harvested area is forecast at 600,000 hectares, unchanged from last month and down 4 percent from last year.

Cotton planting occurs from October through January. Cotton is mainly grown in the northern provinces: on average, 48 percent of production occurs in Santiago del Estero, 30 percent in Chaco and 15 percent in Santa Fe. During February, the crop was in flowering to open boll stages. Rainfall during both January and February were below average when the crop was at the key boll formation phase. Rainfall will be needed during March to halt further deterioration of the crop. Harvest begins in April. (*For more information, please contact [Katie.McGaughey@usda.gov](mailto:Katie.McGaughey@usda.gov).*)

The Foreign Agricultural Service (FAS) updates its production, supply and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.

### FAS Reports and Databases:

#### **World Agricultural Production**

Current: <https://www.fas.usda.gov/data/world-agricultural-production>

Archive: <https://usda.library.cornell.edu/concern/publications/5q47rn72z?locale=en>

USDA's Foreign Agricultural Service (FAS) publishes a monthly report on crop acreage, yield and production in major countries worldwide. Sources include reporting from FAS's worldwide offices, official statistics of foreign governments, and analysis of economic data and satellite imagery. The reports reflect official USDA estimates released in the monthly *World Agricultural Supply and Demand Estimates* (WASDE).

#### **World Markets and Trade**

Current: <https://www.fas.usda.gov/data>

Archive:

[https://usda.library.cornell.edu/catalog?1%5Bmember\\_of\\_collections\\_ssim%5D%5B%5D=Foreign+Agricultural+Service&locale=en](https://usda.library.cornell.edu/catalog?1%5Bmember_of_collections_ssim%5D%5B%5D=Foreign+Agricultural+Service&locale=en)

USDA's Foreign Agricultural Service (FAS) publishes monthly and quarterly reports which include data on U.S. and global trade, production, consumption and stocks, as well as analysis of developments affecting world trade in oilseeds, grains, cotton, livestock and poultry. The reports reflect official USDA estimates released in the monthly *World Agricultural Supply and Demand Estimates* (WASDE).

#### **Global Agricultural Information Network (GAIN)**

<https://gain.fas.usda.gov/>

USDA's Foreign Agricultural Service (FAS) provides timely reports on foreign markets through the Global Agriculture Information Network (GAIN) database. An average of 2,000 reports are added each year, with reports going back to 1995. GAIN reports are compiled by FAS' global market intelligence network, which includes FAS foreign service officers and locally engaged staff in over 90 overseas offices world-wide. They provide on-the-ground intelligence, insight, and analysis on nearly 200 countries, delivering information on foreign agricultural markets, crop conditions, and agro-political dynamics of interest to U.S. agriculture. GAIN reports contain assessments of commodity and trade issues made by USDA staff and are not necessarily statements of official U.S. government policy.

#### **Production, Supply and Distribution (PS&D) Online**

<https://apps.fas.usda.gov/psdonline/app/index.html#/app/home>

PSD Online is the public repository for USDA's Official Production, Supply and Distribution forecast data and reports for key agricultural commodities. PSD Online data are reviewed and updated monthly by an interagency committee chaired by USDA's World Agricultural Outlook Board (WAOB). The committee consist of representatives from Foreign Agricultural Service (FAS), the Economic Research Service (ERS), the Farm Service Agency (FSA), and the Agricultural Marketing Service (AMS).

#### **EU Countries and Russia Wheat: Area and Production Estimates**

<https://apps.fas.usda.gov/psdonline/app/index.html#/app/downloads> (click on PSD Datasets)

USDA's Foreign Agricultural Service (FAS) provides country-level area and production estimates for the nations of the European Union. For Russia, country-level area and production estimates are provided for Winter and Spring wheat. These datasets are reviewed and updated monthly by an interagency committee chaired by USDA's World Agricultural Outlook Board (WAOB) and can be downloaded through PSD datasets on PSD Online.

## FAS Reports and Databases:

### International Production Assessment (IPAD)

<https://ipad.fas.usda.gov/>

USDA's Foreign Agricultural Service (FAS) maintains a dynamic global crop production portal with key information including *World Agricultural Production* (WAP) briefs, Commodity Intelligence Reports (CIR), geospatial applications, crop production maps at a subnational level and crop calendars for the top-20 producing countries. Additionally, Crop Explorer (<https://ipad.fas.usda.gov/cropexplorer/>) displays rainfall, temperature, evapotranspiration, soil moisture, snow cover, and vegetation conditions in charts and maps.

### USDA and NASA Global Agricultural Monitoring (GLAM)

<https://glam1.gsfc.nasa.gov/>

The USDA and NASA Global Agricultural Monitoring (GLAM) system provides near real-time and science quality Moderate Resolution Imaging Spectroradiometer (MODIS) Normalized Difference Vegetation Index (NDVI) from the satellites Terra and Aqua. The public can view and retrieve MODIS 8-day composited, global NDVI satellite imagery and time series data. GLAM was developed by NASA's Global Inventory Modeling and Mapping Studies (GIMMS) group for USDA's Foreign Agricultural Service.

### Global Agricultural and Disaster Assessment System (GADAS)

<https://geo.fas.usda.gov/GADAS/index.html>

USDA's Foreign Agricultural Service (FAS) provides the Global Agricultural and Disaster Assessment System (GADAS), a web-based Geographic Information System (GIS) tool which integrates a vast array of highly detailed earth observation data streams, particularly targeted towards agricultural and disaster assessment analysis. GADAS is an interactive website which provides analysts with a wide variety of routine geospatial products (maps, charts, tables) they require for comprehensive situational investigations and recurring assessments.

### Export Sales Reporting

<https://apps.fas.usda.gov/esrquery/>

USDA's Export Sales Reporting Program monitors U.S. agricultural export sales on a daily and weekly basis. Export sales reporting provides a constant stream of up-to-date market information for 40 U.S. agricultural commodities sold abroad. The weekly U.S. Export Sales report is the most currently available source of U.S. exports sales data. The data is used to analyze overall levels of export demand, determine where markets exit, and assess the relative position of U.S. commodities in foreign markets.

### Global Agricultural Trade System (GATS)

<https://apps.fas.usda.gov/gats/default.aspx>

The Global Agricultural Trade System (GATS) is a searchable database containing monthly U.S. Census Bureau trade data organized by agricultural commodity and agricultural related product groups. Trade data is searchable by partner countries and partner groups. Historical U.S. agricultural trade data is available back to 1967. In addition, U.N. trade statistics (UN Comtrade) may be queried through GATS. UN trade data is available for nearly 200 countries or areas, dating from the inception of the Harmonized System (HS) of trade codes in 1989 to present. The database is continuously updated. U.S. trade data is updated monthly according to the U.S. Census Bureau's reporting system. UN Comtrade data are updated in GATS after nationally submitted data to the UN are standardized by the UN Statistical Division and added to the UN Comtrade database.

## TABLE 18

The table below presents a record of the March projection and the final estimate. Using world wheat production as an example, the "root mean square error" means that chances are 2 out of 3 that the current forecast will not be above or below the final estimate by more than 0.5 percent. Chances are 9 out of 10 (90% confidence level) that the difference will not exceed 0.9 percent. The average difference between the March projection and the final estimate is 2.4 million tons, ranging from 0 million to 8.0 million tons. The March projection has been below the estimate 32 times and above 11 times.

1/ Marketing years 1981/82 through 2023/24 for grains, soybeans, and cotton. Final for grains, soybeans, and cotton is defined as the first November estimate following the marketing year for 1981/82 through 2022/23, and for 2023/24 the last month's estimate.

2/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain
