Lishui Fruit Market Import Statistics

2002

Approved by:

Ralph Gifford

U.S. Embassy Beijing

Prepared by:

John D. Rutledge

Report Highlights:

Guangdong's Lishui Fruit Market is the largest imported fruit wholesale market in China. From 2000 to 2001, its import volumes and values rose. U.S. fruit varieties hold a sizable share of the market, but tropical fruits from Southeast Asia make up a large portion too.

Includes PSD changes: No

Unscheduled Report
Guangzhou [CH1], CH

Ever since the Lishui Fruit Wholesale Market of Guangdong province opened in the late 1990s, it has been the largest imported fruit wholesale market in China. The Lishui Market, according to a comparison of its own import statistics for the years 2000 and 2001, continues to grow in terms of the number of containers of imported fruit that pass through the market and the value of the product in these containers. U.S. origin fruit comprises a substantial amount of the volume and value, but so do fruits that originate from Southeast Asia. In addition, the value of imported fruit that Lishui claims to have passed through the market for many varieties are higher than the value cited by either China Customs or Hong Kong re-exports to China data.

According to statistics provided by the Lishui Fruit Wholesale Market, a total of 16,675 containers of imported fruit with a total value of 4.46 billion Yuan (\$539 million) entered the market and was distributed throughout China during 2001. In comparison with the market's 2000 numbers, both container volume and value were noticeably higher. Container volume registered a 85.7 percent increase whereas value a 68.5 percent increase. Much of the volume and value is represented by several varieties; including durian, oranges, red table grapes, longans, and apples. Durians and longans together accounted for 38.9 percent of the volume in 2001.

U.S. fruit accounts for a sizable amount of volume and value, too. In 2000, the U.S. share of total volume was 26.7 percent and the share of total and value was 20.2 percent. In 2001, the U.S. share was higher. It represented 29.5 percent of total volume and 24.5 percent of total value. Apples, red table grapes, and oranges make up most of the volume and value of the U.S. fruit going into the Lishui market, but U.S. lemons, plums, green table grapes, black table grapes, and cherries also are sometimes available in the market. Absent from the market are U.S. grapefruit, kiwifruit, and tangerines. The volumes and values rose between the years 2000 and 2001 for all U.S. varieties that are often found in Lishui,.

Lishui's import value statistics in comparison with both China's own customs statistics and Hong Kong re-exports to China data for several varieties indicate a wide difference. In many cases, the Lishui values are much higher than those listed by either of the other number sets. In one case, for example, the Lishui import value for tangerines in 2000 was 305 percent higher than the China Customs number and 2,703 percent higher than the Hong Kong re-export figure. This divergence between the number sets possibly indicates the continuance of Guangdong provincial importers undervaluing their import cargoes for local customs inspection or under reporting true cargo volumes. This practice was prevalent among Guangdong importers in the 1990s and is still suspected to exist. However, whether these value figures in comparison with other sources are an indicator of particular trade practices mostly depends on the methodology that Lishui has been using to calculate the import value. If Lishui is calculating value based on container numbers and average prices in their market, these value are more of an indicator of importer/distributor margins and not the actual values of the imports upon reaching the market. At the present time, their methodology is unknown.
