Oilseeds and Products

Annual

2007

Approved by:
Oliver Flake
U.S. Embassy, New Delhi

Prepared by:
Deepa Dhankhar

Report Highlights:
Post's oilseed production forecast for MY 2007/08 is revised upwards to 32.2 million tons compared to 29.7 million tons for MY 2006/07. Vegetable oil imports for MY 2006/07 are expected to be higher at 5.2 million tons compared to 4.2 million tons during MY 2005/06, while imports for MY 2007/08 are forecast at 4.9 million tons. The composition of palm oil and soybean oil in the MY 2006/07 edible oil import basket is estimated at 3.5 million tons and 1.5 million tons respectively.

Executive Summary

Post forecasts an eight percent increase in total oilseed production (soybean, peanut, rapeseed/mustard, sunflower, cottonseed & copra) for MY 2007/08 at 32.2 million tons, assuming normal climatic conditions. MY 2006/07 production declined from previous year to 29.7 million tons on account of lower rapeseed and peanut production. Oilseed consumption for MY 2007/08 is forecast at 31.7 million tons compared to 30.4 million tons in MY 2006/07, with more than 80 percent for crushing.

Total oilmeal production for MY 2007/08 is forecast at 14.8 million tons, which would be a 5 percent increase over MY 2006/07 production. Higher soybean production and large stocks of mustard are expected to mitigate expected lower production of mustard and peanut during MY 2006/07 and thus there would be minimal impact on the overall meal production. Indian oilmeal exports have registered a 12 percent increase during the first seven months of MY 2006/07. Soybean meal and rapeseed meal are the two largest oilmeals exported out of India, due to price competitiveness, high protein content (soybean), biotech free status and shorter shipping time.

Edible oil production in MY 2007/08 is forecast to increase from this year to 6.9 million tons, due to anticipated larger crush availability of mainly rapeseed, soybean and cottonseed. Edible oil consumption for MY 2007/08 is forecast at 11.8 million tons with expected import dependence of 41 percent. Meanwhile, MY 2006/07 edible oil imports are estimated at 5.2 million tons with 3.5 million tons and 1.5 million tons of palm oil and soybean oil imports respectively. The Government of India (GOI) has reduced the import duties on edible oils by withdrawing the special additional duty, while the basic import duties for sunflower oil and palm oil have also been lowered in anticipation of low domestic oilseed production and higher international prices.

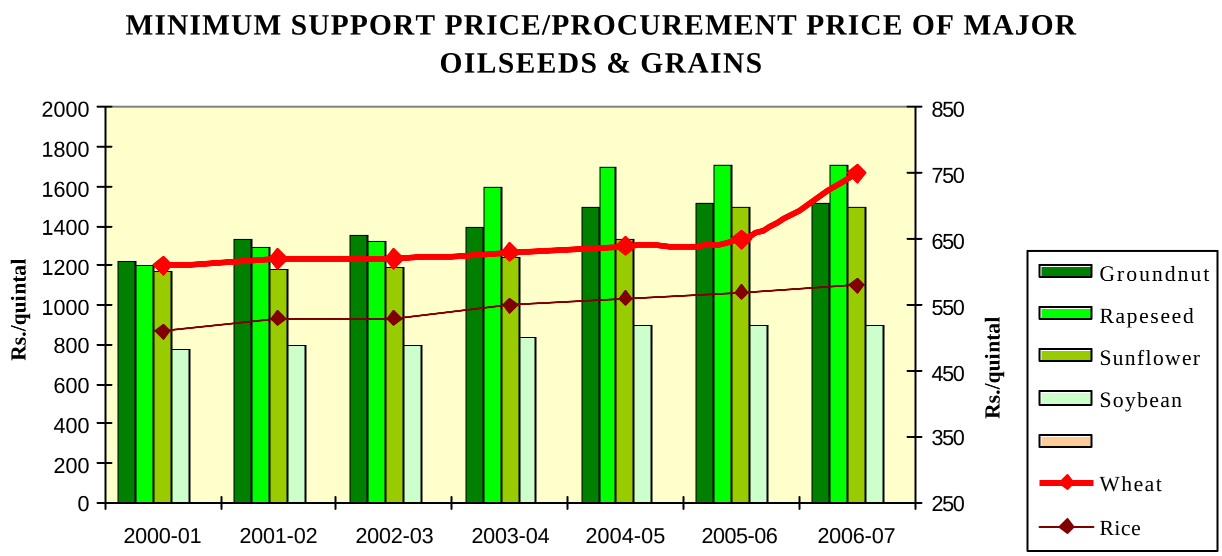
Production

Indian oilseed production for the MY 2007/08 is forecast at 32 million tons, assuming normal climatic conditions and higher prices on account of lower production in 2006/07. Soybean, rapeseed/mustard, peanut, cottonseed, sunflower and copra are used in calculating total oilseed production. The Indian Meteorological Department (IMD) is forecasting a near-normal southwest monsoon for 2007/08. Soybean area is forecast to increase further with acreage expansion expected in the state of Maharashtra and potential for new area in the states of Punjab, Haryana and Jharkhand. Nevertheless, the preference for planting cotton over peanut is expected to continue in the major growing state of Gujarat. Cotton is an increasingly preferred option for farmers over peanut due to higher crop returns, lower cost of production, less crop monitoring and a shift in consumption patterns in favor of cottonseed oil. Rapeseed/Mustard crop production is forecast to increase to seven million tons in MY 2007/08 on account of higher mustard prices in the current season along with expected lower carryin stocks. Soybean, Rapeseed/mustard and peanut account for more than 80 percent of total oilseed production[1] in India.

The oilseed production estimate for MY 2006/07 is lower than the previous year by 8 percent at 29.7 million tons, on account of lower rapeseed/mustard and peanut production.

Figure:I



Source: Economic Survey 2006-2007

The GOI has established minimum support prices for selected agricultural commodities, including oilseeds. The rate of growth of the MSP for oilseeds has not been parallel to commodities like wheat and rice. Additionally, farmers feel that there is a lack of initiatives from the government in supporting oilseed production and thus a shift in acreage from oilseeds to grain crops was seen in the recent winter sowing season.

---

[1]Some of the minor oilseed crops (sesame, niger, safflower) have not been covered in this report.

However, in the 2007/08 budget announced on Feb 28, 2007, the government decided to extend the existing Technology Mission On Oilseeds and Pulses (TMOP[2]). The program will now have an increased focus on raising the production of breeder, foundation and certified seeds. An accelerated irrigation development program has also been proposed in the budget with an investment outlay of $2.6 billion.

Table 2: Capacity Utilization in the Indian Oilseed processing Industry

Vegetable Oil Processing Facility	Number of Units	Annual Capacity	Average capacity Utilization
		(m MT)	(%)
Oilseed Crushing Units	150,000	42.5	10.30
Solvent Extraction Units	704	310	31
Refineries attached with Vanaspati units	126	51	45
Refineries attached with Solvent Extraction Plant	295	36	27
Independent Refineries	585	35	36
Total Refineries	1006	122	35
Vanaspati Units	256	20	24

Source: Central Organization For Oil Industry and Trade

The Indian oilseed processing industry is working below the available capacity because of the limited supply of the raw material, seasonal production of oilseeds, and excess of processing infrastructure. Phytosanitary requirements effectively block imports of oilseeds into India, these phytosanitary requirements for oilseeds are specified in the Plant Quarantine order, 2003 (http://www.plantquarantineindia.org) and its subsequent amendments.

Consumption

About 80 percent of oilseed production is used for crushing, except for groundnut for which allocation for crushing has decreased to around 70 percent due to increased demand for peanuts. Most of the crushing of high oil content oilseeds is carried out in traditional, low technology, and small-scale plants called '*Ghanis*'. Solvent extraction technology is used for low recovery oilseeds like soybean and also for recovery of residual oil from meals. The annual capacity utilization for solvent extraction plants is just around 10 percent of the total capacity utilization under oilseed crushing units. Food use of oilseeds is limited but is growing for oilseeds like peanut, while use of value added soy products like tofu, milk, nuggets, granules and ingredient for wheat flour fortification are largely being promoted as health foods. Mustard seed is mainly used as a spice. According to the National Sample Survey Organization (NSSO) report 2004-05 (released in April 2007), the consumption of peanuts[3] has risen by around 50 percent in both urban & rural households from 1993/94 to 2004/05.

---

[2] For more details on the objectives framed under the already existingTMOP, please visit: **http://dacnet.nic.in/oilseeds/introtmop.html**
[3] measured by the proportion of households consuming peanuts in a 30-day period

Stocks

The National Agricultural Cooperative Marketing Federation of India (NAFED) procured huge volumes of the mustard crop during MY 2005/06. However, NAFED was not able to procure substantial supplies during MY 2006/07 mainly because market prices for rapeseed-mustard were far above the MSP and thus carry in stocks for 2007/08 are expected to be low. Stocks during MY 2006/07 for other oilseeds are almost insignificant and particularly low for mustard and peanut.

Trade

India continues to export peanuts, sesame and small quantities of sunflower, soybean, cottonseed and niger seeds to several countries (Sesame & Niger seeds are not covered in this report). Korea, U.S.A. and EU are the major importing countries for sesame seed, while major peanut exports are targeted to Indonesia, Malaysia and the Philippines. The Export Promotion Council (EPC) was recently created for the promotion of oilseed exports from India. The EPC for oilseeds will be a quasi government body but is yet to finalize its institutional structure.

Subsection B: OILMEALS

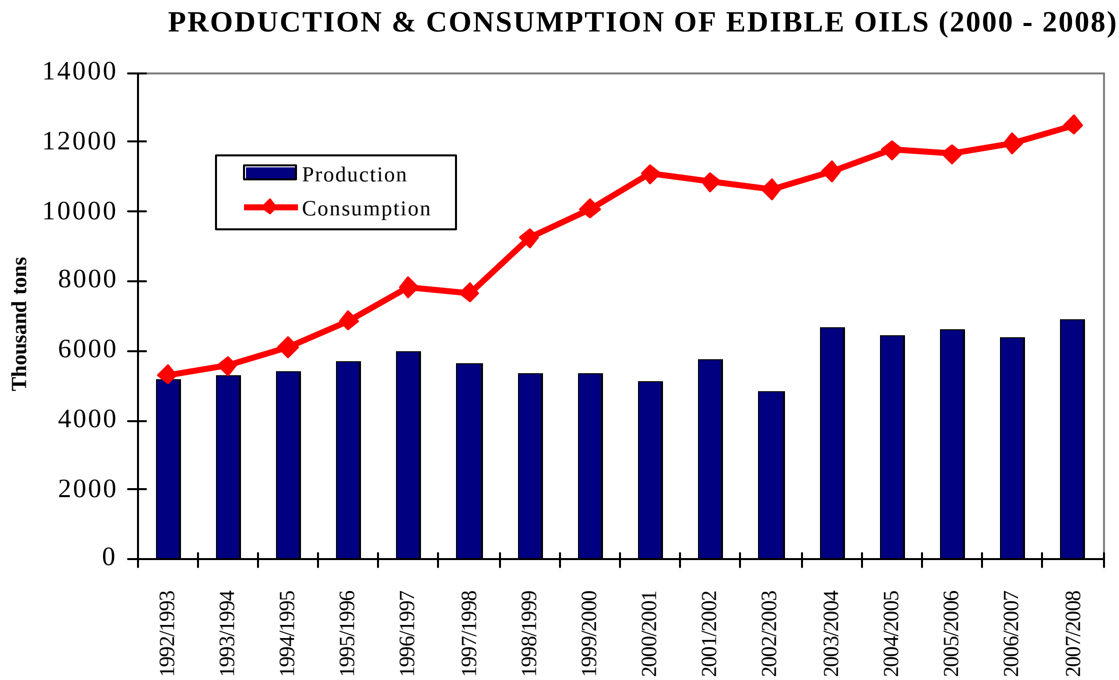
Ending Stocks	300	97	117
Total Distribution	14844	14372	14902

Production

MY 2007/08 oilmeal production is forecast at 14.8 million tons, four percent higher than MY 2006/07. Increased availability of soybeans for crushing due to higher production in MY 2006/07 and huge stocks of rapeseed available with NAFED has kept meal availability largely unaffected from the impact of lower total oilseed production.

FIGURE: 2



Consumption

Consumption of oilmeals is forecast at 10 million tons for MY 2007/08, four percent higher than MY 2006/07 based on expected higher oilseed production. Soybean meal and peanut meal consumption in MY 2007/08 is forecast at 1.6 and 1.5 million tons respectively. Domestic demand for oilmeals is continuously increasing on account of the expanding dairy, livestock and poultry sectors. In addition, lower maize production (which forms the major feeding ingredient for the poultry industry) in the country is leading to higher protein meal demand. The trend is being reflected in the higher domestic prices of oil meals, which may lead to reduced exports in years to come. According to the Ministry of Agriculture, the total annual requirement of protein meals is more than 40 million tons out of which less than 20 million tones are produced in India. Most livestock is fed imbalanced feed in India, which is generally sourced from regionally available ingredients, leading to low productivity.

Only five percent of cottonseed in the country is processed through scientific processing methods leading to residual oil (around 7 percent) in the meal. This leads to unnecessary wastage of edible oil. Sunflower meal exports are almost negligible because of greater domestic demand and high prices.

Trade

Soybean meal is the largest meal exported from India followed by rapeseed, rice bran, castor, peanut, and sunflower. Meal export data for the first seven months of the MY 2006/07 depicts a 12 percent increase over MY 2005/06. Soybean and rapeseed meal constituted around 80 percent of the total exports. Increased exports are attributed to the good soybean harvest and regular liquidation of rapeseed stocks held by the NAFED. Generally, more than 70 percent of soybean meal and 20 percent of the rapeseed meal production is exported. Indian meals enjoy the competitive advantages of low freight costs, ability to send smaller vessels, shorter voyage time, biotech free status, and higher protein content (specifically in Soybean meal).

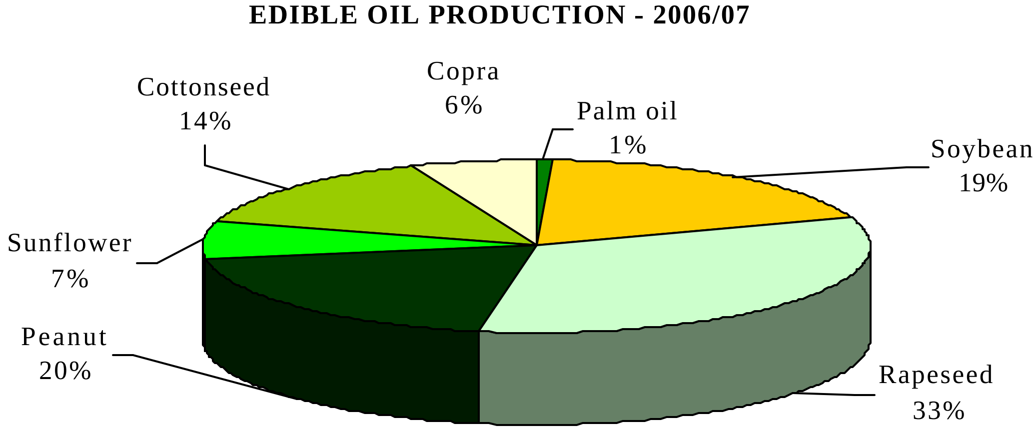
Production

Post forecasts MY 2007/08 edible oil production to increase by eight percent to 6.9 million tons compared to MY 2006/07. Edible oil production for MY 2006/07 is estimated at 6.4 million tons largely dominated by rapeseed, soybean, peanut and cottonseed oils**.** Other minor edible oils like rice bran oil, sesame seed oil, safflower oil and other various minor oils are also produced (around 1.5 million tons) and domestically consumed in the country, but these have not been covered in this report. Rice bran oil is increasingly being promoted as a health oil & consumption is rising. Plantations of palm are restricted to Andhra Pradesh and Kerala and production of palm oil is very small.

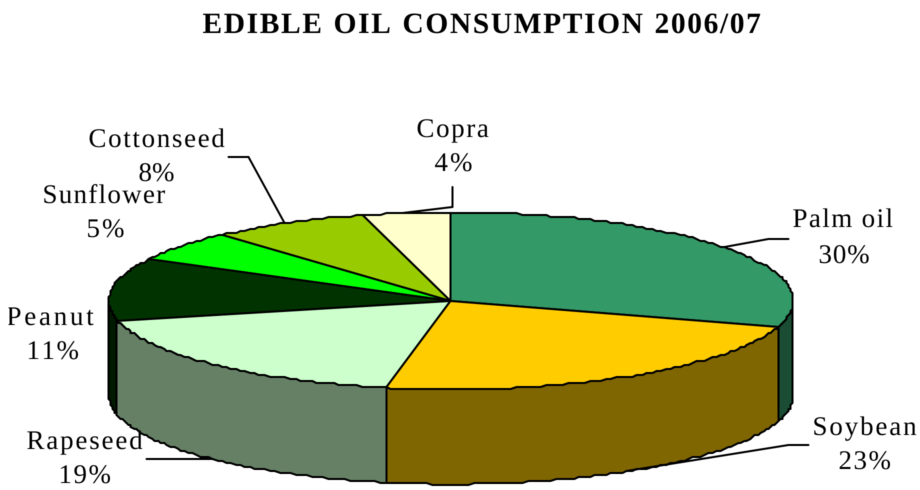
Figure II:



Consumption

Edible oil consumption in MY 2007/08 is forecast at 11.8 million tons. The oil consumption estimate for 2006/07 is pegged at 11.7 million tons, with import dependence at 45 percent. Palm oil (mostly imported) continues to be the favored edible oil due to its lower price, versatility in blending with other oils, and increased usage in the bakery, margarine and vanaspati (partially hydrogenated vegetable oil) industries. Soybean, rapeseed/mustard and peanut are other major oils in terms of consumption. Cottonseed oil is also emerging as a prominent oil in the total oil consumption pool, closely competing with peanut oil.

Figure III:



Edible oil consumption patterns in India are region specific, with Palm and coconut preferred in the south, peanut in Gujarat, Cottonseed in Gujarat, Maharashtra and Punjab, Rapeseed in the eastern states and some northern states, sunflower in northern states and soybean in northern and central India. Consumer preferences in western India are slowly shifting towards cottonseed oil from peanut oil because of lower availability (due to reduced peanut production) and higher market prices of peanut oil. Cottonseed oil is largely used for blending purposes due to its easy blending properties with higher priced oils, light color, and relatively neutral odor. Per capita consumption of edible oils in MY 2006/07 is estimated at around 11.6 kg per person per year, which is around one-half of the world average. A large proportion of Indian consumers are price sensitive and the impact of prices is seen in consumption patterns. In view of rising prices of edible oils, some demand reduction for cottonseed oil is likely during the MY 2006/07.

Table 6: Per Capita Consumption of Edible oils

Year	India	World
1999-2000	11.4	18.43
2000-2001	11.7	19.00
2001-2002	11.7	19.43
2002-2003	11.2	19.77
2003-2004	11.5	20.25
2004-2005	11.7	20.97
2005-2006*	11.5	
2006-2007*	11.6	
2007-2008*	11.6	

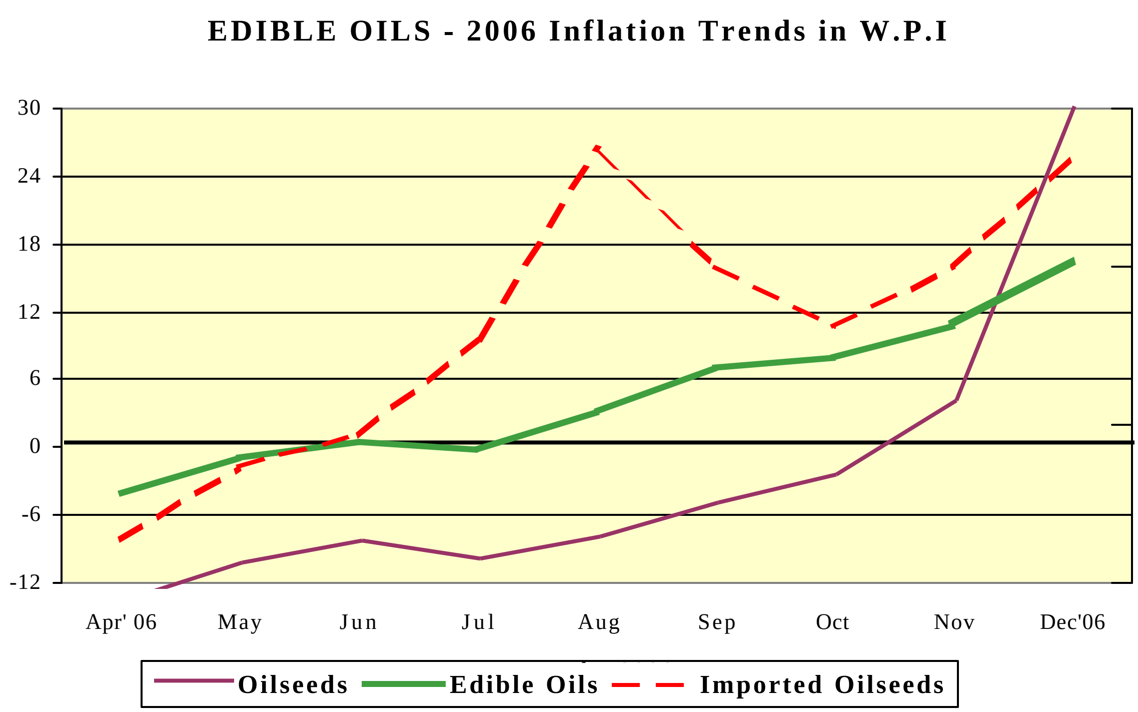
*Source: Oil World Annual, *Post Estimates*

It is important to note that per capita consumption of edible oils increased by 30 percent in rural India and 15 percent in urban India from 1993/94 to 2004/05, according to the latest NSSO report. Per capita consumption of soybean oil, sunflower oil, rice bran oil almost doubled during this period. However, consumption of groundnut oil in urban areas has declined from 40 percent of total oil consumption in 1993/94 to 21 percent in 2004/05 and from 30 percent to 14 percent, in rural areas.

Trade and Policy Developments

MY 2007/08 edible oil imports are forecast at 4.9 million tons, seven percent below MY 2006/07 imports due to a likely increase in domestic production in MY 2007/08. Edible oil prices in the international market began rising from the early part of the current year and lower domestic production estimates further flared domestic prices. The GOI in turn reduced the import duties on several vegetable oils except *vanaspati* (hydrogenated Fat) twice this year. The import duty on refined and crude sunflower oil was reduced on March 1, 2007 and all-edible grade vegetable oils were exempted from the Special additional duty. Inflationary pressure from essential items, including edible oils, initiated the first duty reduction by the government as a price control measure. Nonetheless, rising international prices nullified the impact of this duty reduction. Furthermore, on April 13, 2007 the customs duty on the palm group oils was reduced by 10 percent. With this reduction, the duty differential between palm oil and soybean oil was narrowed. The current effective duty on crude palm oil is 51.5 percent compared to 45 percent on soybean oil. The palm oil group duty reduction was enacted as a result of estimated higher edible oil imports due to low domestic production and high international palm oil prices. Palm oil imports are estimated at 3.5 million tons during MY 2006/07 and the palm oil to soft oil percentage composition is expected to be 67:33.

Figure IV: Inflation Trend in Edible Oils and Oilseeds



Source: Economic Survey, 2006-2007
(W.P.I – Wholesale Price Index)

The GOI extended the exemption on Biotech soybean oil imports from pre-import clearance and biotech declaration requirements, until December 31, 2007. Soybean oil is the second largest imported vegetable oil in India after palm oil. The Government of India's decision to extend the exemption is largely driven by the likelihood of increased vegetable oil import demand due to low domestic oilseed production. Additionally, the measure was taken to control rising prices of essential commodities. For additional details on the contents of the regulation, please see GAIN Report IN 7022.

MY 2006/07 soybean oil imports are estimated at 1.5 million tons. Contracts for Soybean oil vessels for April and May were less than expected because of the late announcement of the GM soybean oil import exemption rule. Like soybean oil, palm oil prices have also followed an upward trend in the international market this year and palm oil is also being diverted for biofuel production around the world. Nonetheless, the price parity on the basis of the international prices, effective duty and tariff value, currently favors increased palm oil imports over soybean oil.

Table 7: Revised Import duty Structure On Edible Oils

(In Percentage)

Edible Oil	Duty	E.C	S.A.D	Effective Duty
Crude Palm Oil	50	3	0	51.5
