Prepared by:

Amit Aradhey

Report Highlights:

MY 2008/09 total oilseed production is forecast at 36 million tons, up 6 percent over MY 2007/08, mainly due to an anticipated increase in soybean and peanut production in response to prevailing high prices. MY 2008/09 edible oil imports are forecast at around 5 million tons, marginally below MY 2007/08 estimated imports of 5.1 million tons (4.1 million tons of palm oil and one million ton of soybean oil) due to likely higher domestic production. Prevailing high international prices are likely to boost oil meal exports, mainly soybean, to an estimated 5.3 million tons. MY 2008/09 meal exports are forecast at a record level of 5.5 million tons, assuming world prices continue to remain strong.

Executive Summary

Post forecasts MY 2008/09 (Oct-Sep) total oilseed production (soybean, peanut, copra, rapeseed/mustard, cottonseed and sunflower) at around 36 million tons, up by 6 percent over the MY 2007/08 production estimate. MY 2007/08 oilseed production is revised up marginally to 34 million tons to reflect higher cottonseed production. The total domestic consumption of oilseeds for MY 2008/09 is forecast to increase to 35.5 million tons, up by 2 million tons from MY 2007/08.

My 2008/09 oilmeal production is forecast at 16.3 million tons as compared to 15.4 million tons estimated for MY 2007/08. Record soybean production in MY 2007/08 has led to an upward revision in the MY 2007/08 total oil meal production estimate to 15.4 million tons, up 9 percent over the previous year. MY 2008/09 oilmeal exports are forecast to increase by 4 percent to 5.5 million tons on an anticipated increase in demand across Asian countries, major importers of Indian oil meals. MY 2007/08 total oil meal exports are estimated at 5.3 million tons, up 23 percent over the previous year.

MY 2008/09 total edible oil production is forecast at 7.3 million tons, up by six percent over MY 2007/08. Most of the increase is likely in peanut, soybean and a marginal increase in rapeseed production. Edible oil production for MY 2007/08 is estimated at 6.9 million tons, up by 400,000 tons over the previous year. Edible oil consumption in MY 2008/09 is forecast to increase by 3 percent to 12.1 million tons. Edible oil imports in MY 2008/09 are forecast at around five million tons, three percent below MY 2007/08 imports due to a likely increase in domestic production. Post estimates MY2007/08 edible oil imports at 5.1 million tons with palm oils dominating imports.

Production

Assuming favorable growing conditions, post forecasts MY 2008/09 (Oct-Sep) total oilseed production¹ (soybean, peanut, copra, rapeseed/mustard, cottonseed and sunflower) at 36 million tons, up 2 million tons from the MY 2007/08 production estimate. The increase stems from the Indian Meteorological Department's recent early forecast of a normal summer monsoon this year and prevailing high domestic prices for all oilseeds, which should prompt farmers to bring larger area under oilseed cultivation, particularly soybeans and peanuts. However, the rapeseed crop planted in the fall will face increased competition from wheat and winter season pulses, such as chick peas, and lentils.

MY 2007/08 total oilseed production is revised marginally upward to 34 million tons from the earlier estimate of 33 million tons, mainly due to higher cottonseed production (see cotton update IN8017), which is now estimated at 10.4 million tons, up 14 percent over MY 2006/07 production. However, sunflower production is trimmed to 1.12 million tons on account of adverse weather conditions affecting the Rabi (winter) season crop in south India.

During MY 2007/08, prices of all major oilseeds were above the government's support price providing an incentive for farmers to bring more area under oilseed cultivation in MY 2008/09. Although the GOI's recently announced National Food Security Mission does not cover oilseeds, the GOI provides various incentives and financial support to oilseed growers under the GOI's Integrated Oilseeds, Oil Palm, Pulses and Maize Development program (ISOPOM), in the form of input subsidies and extension services.

MY 2007/08 Oilseed Production Estimate

Consumption

Almost 80 percent of oilseed production is crushed for oil while around 20 percent goes for food, feed and seed use. MY 2008/09 total oilseed crush is likely to be higher because of anticipated higher production. Food use of oilseeds is also forecast to increase to around 1.9 million tons from 1.6 million tons in MY 2007/08, because of increasing use of soybeans for the manufacture of soy foods, and increased use of oilseeds such as peanuts for table use and in snack foods. An increase in direct feed use of oilseeds in MY 2008/09 (forecast at 5.1 million tons) should be largely driven by cottonseed, forecast at 3 million tons.

¹ Minor oilseed crops such as sesame seed, niger, and safflower are not covered in this report.

Stocks

As open market prices of oilseeds in MY 2007/08 were much higher than the government's support price (Table 2), there was no significant procurement of oilseeds by government agencies such as the National Agricultural Cooperative Marketing Federation of India (NAFED). Because of the tight supply situation, no significant build up in private trade-held stocks is anticipated.

Table 2: Higher market prices for oilseeds in India for MY 2007/08

| S.No | Commodity | # MSP for crop year 2007-08 | *Market Price |
|------|------------------|-----------------------------|---------------|
| 1. | Soybean | 910 (black) & 1050 (yellow) | 2,100-2,200 |
| 2. | Rapeseed/mustard | 1,800 | 2,500-2,600 |
| 3. | Peanut | 1,550 | 2,600-2,700 |
| 4. | Sunflower seed | 1,510 | 2,400-2,500 |

Minimum Support Prices (MSP) (Rs/quintal)

* Market prices (Rs/quintal) as of April 30, 2008

Trade

India's major oilseed export item, Hand Picked Select (HPS) peanuts, exports in MY 2008/09 are forecast at 160,000 tons, mostly to South East Asian countries due to anticipated higher production and the improving quality of Indian HPS peanuts. Exports to the EU, another important market for peanuts, are currently restrained due to the issue of Rapid Alerts against Indian peanuts for the presence of aflatoxins. The Indian Oilseed & Produce Exporters' Association (IOPEA), the export promotion agency for peanuts, along with the government's Agricultural and Processed Food Products Export Development Authority (APEDA) are jointly trying to address this issue. Other oilseeds exported from India include sesame, safflower and niger seed, and small quantities of sunflower and rapeseed. Sesame seed exports to Russia are facing problems due to phytosanitary issues. The Shellac and Forest Products Export Promotion Council and Export Inspection Council of the GOI are trying to address this problem. Oilseed imports, although no longer restricted by quantitative measures, are prevented by high tariffs, phytosanitary regulations, and a biotech restriction.

Subsection B: OILMEALS**Table 3: TOTAL OILMEALS PSD**

| Total Distribution | 14883 | 15711 | 16570 |

Production

MY 2008/09 oil meal production is forecast at 16.3 million tons, six percent higher than in MY 2007/08 on anticipated higher oilseed production and larger crushing in response to rising feed demand in domestic and international markets. Record soybean production is due to excellent growing conditions and in response to high international prices for soybean meal, which has led to an upward revision in the MY 2007/08 total oil meal production estimate to 15.4 million tons, up 9 percent over the previous year.

Consumption

The MY 2007/08 domestic consumption estimate of total oil meals is marginally trimmed to 10.2 million tons to reflect reduced feed use across the poultry sector due to avian influenza outbreaks in North East Indian states. Consumption is forecast to increase by 5 percent to 11 million tons for MY 2008/09 due to expected higher meal production, provided there is no additional major outbreak, which could curtail oil meal consumption. The MY 2008/09 consumption forecast includes 2.2 million tons each of soybean meal, and rapeseed meal, and 3.6 million tons of cottonseed meal, mostly used in livestock feed production. Domestic demand for oil meals is continuously increasing on account of the expanding dairy, livestock and poultry sectors. The organized feed industry uses mostly soy meal (to produce broiler feed), but also includes peanut, sunflower seed, and rapeseed meals in feed formulations. Food use of soy meal is mostly confined to the production of fat-free soy flour and texturized soy protein.

Trade

MY 2008/09 oilmeal exports are forecast to increase by 4 percent to 5.5 million tons on an anticipated increase in demand across Asian countries, which are major importers of Indian

oil meals. MY 2007/08 total oil meal exports are estimated at 5.3 million tons, up 23 percent over the previous year. Record production, high international prices, and a shipment delay of soy meal from South America, due to an ongoing farmer strike, are factors boosting India's oil meal exports, particularly soybean meal, despite appreciation of the Indian rupee against US dollar.

Around 70 percent of soy meal and over 25 percent of rapeseed meal is exported with the rest consumed domestically by the poultry and livestock sectors. Rapeseed meal is finding wide acceptance as an organic nitrogen fertilizer. In addition, other oil meals (castor, linseed and mustard) are used as natural pesticides against soil nematodes and insects. Soy meal is the largest oil meal exported from India followed by rapeseed, rice bran, peanut, and sunflower. Meal export data for the first seven months of MY 2007/08 shows a 16 percent increase over MY 2006/07 (Table 4). Soybean and rapeseed meal constituted over 90 percent of the total exports, although rapeseed meal exports declined marginally compared to the previous year. Peanut meal exports registered a significant increase on account of higher production and better price realization. Sunflower meal exports are almost negligible because of strong domestic demand and higher prices.

Indian meals have a competitive advantage in the world market because of relatively low freight costs due to geographical proximity to major export markets (Asia and the Middle East), ability to ship in smaller vessels, GMO-free status, and higher protein content (48 percent, specifically in soybean meal). Although there are no quantitative restrictions on oil meal imports, the 30.6 percent import duty and the ample availability of cheaper feed materials discourage imports. There is demand from domestic users to ban exports of oil meals in view of the prevailing high prices for milk and poultry products but the government has so far not taken action.

Table 4: Oilmeal Exports (October 2007 – April 2008); (Metric tons)

Production

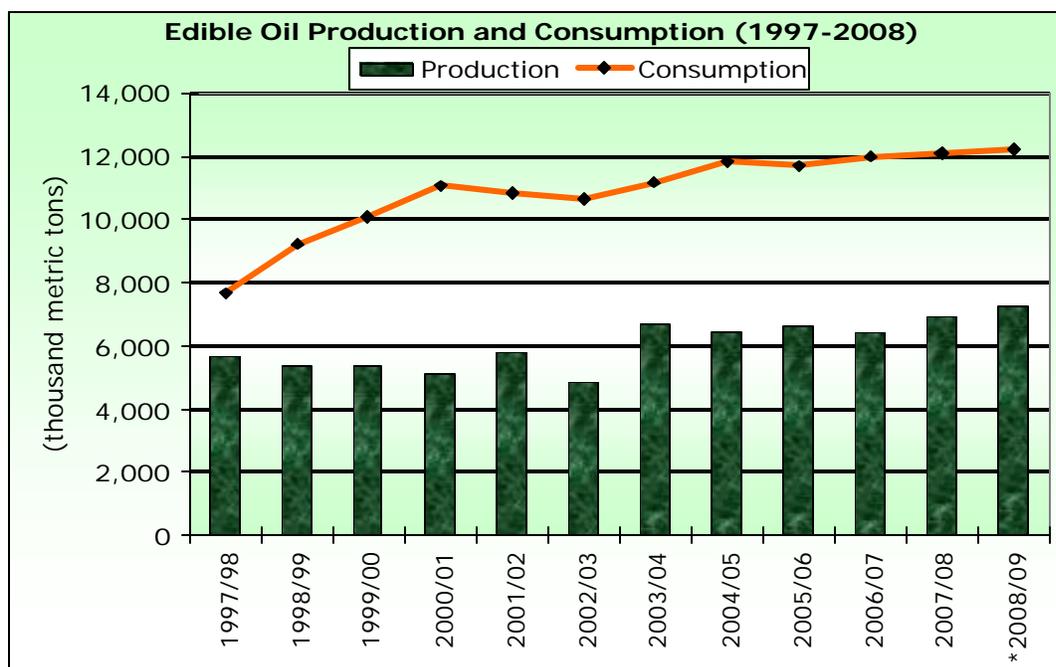

Post forecasts MY 2008/09 total edible oil production at 7.3 million tons, up by six percent over MY 2007/08 due to an anticipated increase in total oilseed production and larger crush. Most of the increase is likely in peanut, soybean and a marginal increase in rapeseed oil. Edible oil production for MY 2007/08 is estimated at 6.9 million tons, up by 400,000 tons over the previous year, which included 1.86 million tons of rapeseed oil 1.63 million tons of peanut oil, 1.4 million tons of soybean oil, and one million tons of cottonseed oil, along with smaller quantities of coconut, sunflower and palm oil. Other minor edible oils not included in this report (totaling 1.6 million tons) are rice bran oil, sesame seed oil, safflower oil and niger seed oil. Sesame seed oil is a premium oil, exported in significant quantities to cater to the demand of overseas buyers.

MY 2007/08 Edible Oil Production

Consumption

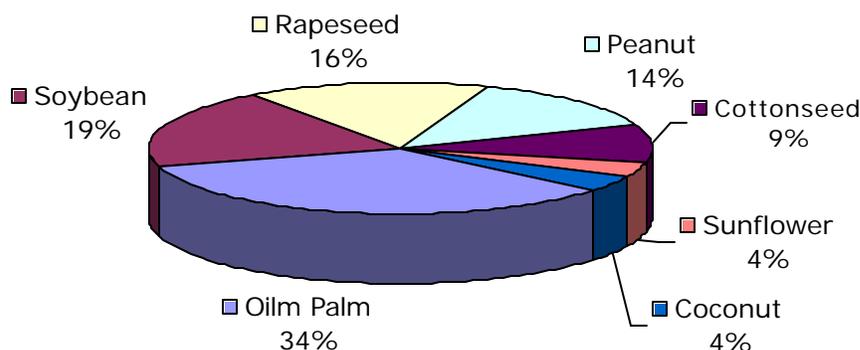

Edible oil consumption in MY 2008/09 is forecast to increase by 3 percent to 12.2 million tons due to the growing population, rising disposable income and larger domestic production. Sunflower, rice bran and safflower oils are now promoted by Indian manufacturers as healthy oils. Cottonseed oil is also finding an increasing place in the India diet, closely competing with peanut oil. Oil consumption in MY 2007/08 is estimated at 11.9 million tons, with imported oils accounting for 43 percent of total consumption. At 4 million tons, palm oil continues to be the major edible oil consumed followed by soy (2.3 million tons), rapeseed oil (1.9 million tons) and peanut oil (1.6 million tons). Relatively lower price, versatility in blending with other edible oils, and increased usage by the confectionary, margarine and vanaspati (partially hydrogenated vegetable oil) industries have made palm oil the most popular oil in India. Cottonseed oil is largely used for blending purposes due to its easy blending properties with higher priced oils, light color, and relatively neutral odor.

* Forecast year

Although edible oil consumption patterns in India are traditionally region-specific (peanut oil in Gujarat and south India, rapeseed oil in north east India, soybean oil in central India, etc.) higher vegetable oil prices in recent years have caused consumers to switch to the cheapest available oil. Per capita consumption of edible oils in MY 2007/08 is estimated at around 12 kg per person per year, which is far less than the world average of around 28 kg per person per year. In India, most of oil is purchased by household or institutional users (food processors, restaurants and hotels) for frying or baking foods and is mostly sold loose or as vanaspati (hydrogenated vegetable oil). Only a small percentage is sold with a name brand and packaged for sale at the retail level. However, vegetable oils remain the main source of fat calories in the Indian diet.

MY 2007/08 Edible Oil Consumption

Trade and Policy Developments

Edible oil imports in MY 2008/09 are forecast at around five million tons, three percent below MY 2007/08 imports due to a likely increase in domestic production. Post estimates MY 2007/08 edible oil imports at 5.1 million tons. Palm oil imports are revised upward to 4.1 million tons from the earlier estimate of 3.4 million tons, and soy oil imports are revised downward to one million tons from the earlier estimate of 1.3 million tons due to world price dynamics. Imports of edible oils during the first half of the MY 2007/08 were 20 percent higher than over last year at 2.4 million tons. Palm oil imports were up by 42 percent while soy oil imports dropped by 26 percent (Table No 8). Though India does not export a substantial quantity of edible oils, recently the GOI on March 17, 2008, banned exports of all edible oils but later permitted exports of coconut and minor forest product oils. India exports less than 1 percent of total edible oils; around 3 to 4 percent is industrial consumption, and 90-92 percent is consumed directly as food.

In order to contain the domestic vegetable oil price rise and to boost domestic supplies, the government abolished the import duty² on crude soybean and palm oil to zero effective April 01, 2008, and lowered the import duty on refined edible oils to 7.5 percent (Table No - 6).

² After the last duty revision on July 23, 2007, India reduced the import duty on crude palm oil, including crude palm olein, to 20% from 45% w.e.f March 20, 2008. (<http://www.cbec.gov.in/customs/cs-act/notifications/notfns-2k8/cs37-2k8.htm>) At the same time, it reduced the duty on refined palm oil, including RBD palm olein, to 27.5% from 52.5%. The import duty on refined rapeseed and sunflower oil was reduced to 27.5 percent from 75 and 50 percent respectively while the duty on crude sunflower oil was reduced by half to 20 percent. The latest import duty revision became effective April 01, 2008.

To further support the supply of vegetable oils, the government issued an order imposing stock limits on edible oils under the provisions of the Essential Commodities Act, but exempted imported oils from this requirement. Additionally, the Forward Market Commission, Ministry of Consumer affairs, issued a notice on May 07, 2008, suspending futures trading in soy oil for a period of 4 months, in order to contain the domestic price rise of vegetable oils.

The GOI has given a one time waiver for imports of GM soybean oil to be consumed after refining. In addition to use of GM soybean oil, there is increasing consumption of cottonseed oil derived from GM cotton. Currently GM cotton accounts for over 80 percent of the total cotton produced domestically.

Table 6: Revised Import duty Structure on Edible Oils (In Percentage)

| Edible Oil | Duty | E.C | S.A.D | Effective Duty |
|---|------|-----|-------|----------------|
| Crude Palm Oil | 0 | 0 | 0 | 0 |
| Vanaspati (Hydrogenated Fat) | 7.5 | 3 | 4 | 12.03 |
| Crude Sunflower Oil | 0 | 0 | 0 | 0 |
| Other Crude Edible Oil for Vanaspati & Refiners | 0 | 0 | 0 | 0 |
| RBD Palmolein | 7.5 | 3 | 0 | 7.72 |
| Refined Rapeseed Oil | 7.5 | 3 | 0 | 7.72 |
| Refined Sunflower Oil & Other Oils | 7.5 | 3 | 0 | 7.72 |
| Refined Soybean Oil | 7.5 | 0 | 0 | 7.5 |
| Degummed Soybean Oil | 0 | 0 | 0 | 0 |

(E.C- Educational Cess, S.A.D. – Special Additional Duty)

Source: <http://www.cbec.gov.in/customs/cs-act/notifications/notfns-2k8/cs42-2k8.htm>

Tariff values (Table No 7) on edible oils are unchanged since September 15, 2006. Customs authorities calculate import duties for edible oils by taking these reference prices as a base.

Table 7: Vegetable Oil Reference Price

| Oil | \$/Ton |
|-------------------|--------|
| Crude Palm Oil | 447 |
| RBD Palm Oil | 476 |
| Other-Palm Oil | 462 |
| Crude Palmolein | 481 |
| RBD Palmolein | 484 |
| Other-Palmolein | 483 |
| Crude Soybean Oil | 580 |

Note: Tariff values are revised from time to time by the GOI to reflect changes in International prices. The import duty is applied to the current tariff value rather than to the actual invoice value.
