Report Name: Agriculture GMOs Safety Assessment Administrative Measures Notified to the WTO

Country: China - People's Republic of

Post: Beijing

Report Category: Biotechnology - Plants and Animals

Report Highlights:

On December 3, 2021, China notified to the WTO SPS Committee the Decision of the Ministry of Agriculture and Rural Affairs (MARA) to Revise the Administrative Measures for the Safety Assessment of Agricultural GMOs as SPS N CHN 1241. The decision changes the nature of biosafety assessment from being on a “crop variety and event” basis to solely on an “event” basis. The change facilitates variety registration of genetically engineered (GE) crop varieties for domestic cultivation and provides for the biosafety assessment of GE crops containing “stacked” traits. The proposed date for adoption of the measures is to be determined and the WTO notification does not provide a comment period.
Summary:

On December 3, 2021, China notified the Decision of the Ministry of Agriculture and Rural Affairs (MARA) to Revise the Administrative Measures for the Safety Assessment of Agricultural GMOs (SPS N CHN 1241) to the WTO SPS committee. The notification follows a November 12, 2021, publication of the same measures on the MARA website for domestic comments. The deadline for domestic comments was December 12, 2021.

A translation of the measure was previously provided under USDA GAIN report CH2021-0139 and is attached to this report.

The proposed date for adoption of the measures is to be determined and the notification does not provide a comment period. Interested parties may still submit comments to the National Enquiry Point:
