

Voluntary Report – Voluntary - Public Distribution

Date: July 19, 2022

Report Number: BE2022-0004

Report Name: European Commission Authorizes one GE Crop for Import

Country: European Union

Post: Brussels USEU

Report Category: Biotechnology and Other New Production Technologies

Prepared By: Luigi Castaldi

Approved By: Elisa Fertig

Report Highlights:

On June 29, 2022, the European Commission (EC) approved one genetically engineered (GE) crop (maize) for food and animal feed. The authorization was published in the European Union's Official Journal on July 1, 2022 and remains valid for 10 years.

General Information:

On June 29, 2022, the European Commission (EC) approved one genetically engineered (GE) crop (maize) for food and animal feed. The crop has gone through a comprehensive and stringent authorization procedure, including a favorable scientific assessment by the European Food Safety Authority (EFSA). The authorization and renewal decisions apply to food and feed for import and processing, but do not cover cultivation and are valid for 10 years. All products will be subject to the EU's strict labelling and traceability rules.

The Commission Implementing Decision for the authorization was published in the Official Journal of the European Union, L 176, on July 1, 2022:

[Commission Implementing Decision \(EU\) 2022/1094 of 29 June 2022 authorising the placing on the market of products containing, consisting of or produced from genetically modified maize DP4114 × MON 810 × MIR604 × NK603 and genetically modified maize combining two or three of the single events DP4114, MON 810, MIR604 and NK603, pursuant to Regulation \(EC\) No 1829/2003 of the European Parliament and of the Council \(notified under document C\(2022\) 4333\) \(1 \)](#)

Authorization Process:

The crop has gone through the EU's full authorization procedure, including a favorable scientific assessment by the European Food Safety Authority (EFSA), as set in Directive 2001/18/EC. After a positive evaluation by EFSA, the EC puts forward a proposal for the authorization of the events that must be voted at the Standing Committee on Plants, Animals, Food and Feed (PAFF) for Genetically Modified Food and Feed and Environmental Risk by EU Member State (MS) representatives. A positive outcome in the PAFF Committee requires a qualified majority. Member States did not reach a qualified majority either in favor or against the crop at the Standing Committees and at the subsequent Appeal Committees thus the Commission has the legal duty to proceed with the authorization.

This event was approved during the PAFF Committee meeting on May 16, 2022. The Appeal Committee meeting took place on June 9, 2022. The EC has already approved 6 biotech products this year, in [March](#) and in [May](#) 2022.
