

Required Report: Required - Public Distribution **Date:** January 02,2020

Report Number: C12019-0011

Report Name: FAIRS Export Certificate Report Annual

Country: Caribbean Basin

Post: Miami ATO

Report Category: FAIRS Export Certificate Report

Prepared By: Omar Gonzalez

Approved By: Richard Battaglia

Report Highlights:

This report outlines Barbados' certification requirements and includes an Export Certificate Matrix as well as examples of select export certificates.

NOTE: This report was prepared by the Caribbean Basin Agricultural Trade Office (CBATO) of the Foreign Agricultural Service (FAS)/U.S. Department of Agriculture (USDA) in Miami, Florida for U.S. exporters of domestic food and agricultural products. While every possible care was taken in the preparation of this report, information provided may not be completely accurate either because policies have changed since its preparation, or because clear and consistent information about these policies was not available. It is highly recommended that U.S. exporters verify the full set of import requirements with their foreign customers, who are normally best equipped to research such matters with local authorities, before any goods are shipped. FINAL IMPORT APPROVAL OF ANY PRODUCT IS SUBJECT TO THE IMPORTING COUNTRY'S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY.

Section II. Purpose of Specific Export Certificate(s)

The following certificates are required by the Ministry of Health and Wellness and by the Ministry of Agriculture and Food Security for food safety and animal health purposes (and in the case of the Phytosanitary certificate for plant health purposes).

- Meat and Poultry Export Certificate of Wholesomeness (FSIS Form 9060-5) & Letterhead Certificate
- Sanitary Certificate for Exports (AMS)
- Export Certificate for Animal Products (APHIS VS Form 16-4) for exporting imported dairy products)
- Shell Egg Grading Certificate (AMS Form LPS-210S)
- Egg Products Export Certificate of Wholesomeness (FSIS Form 9060-5EP)
- Phytosanitary Certificate, PPQ Form 577

The following certificates are required by the Ministry of Agriculture and Food Security for animal health purposes.

- Export Certificate for Animal Products (APHIS VS Form 16-4) for exporting pet food and feathers intended for ornamental use)
- Veterinary Health Certificate for Temporary Export (less than 60 days) of Equines from the United States of America to Barbados
- Veterinary Health Certificate for Export of Equine Semen from the United States of America to Barbados
- Veterinary Health Certificate for Export of Cattle from the United States of America to Barbados
- Veterinary Health Certificate for Export of Goats from the United States of America to Barbados
- Veterinary Health Certificate for Export of Swine from the United States of America to Barbados
- U.S. Health Certificate To Export Poultry Hatching Eggs To Barbados
- U.S. Health Certificate To Export Poultry Day-Old Chicks To Barbados
- Health Certificate To Export Honeybee Queens Apis Mellifera From The United States To Barbados

- Veterinary Health Certificate for Export of Hedgehogs from the United States of America to Barbados In addition, the Ministry of Health and Wellness requires the following certificates for food safety reasons.
- Certificate of Analysis for milk and milk powder
- Export Health Certificate for fish & seafood products

Section III. Specific Attestation Required on Export Certificate(s).

• Meat and Poultry Export Certificate of Wholesomeness (FSIS Form 9060-5) & Letterhead Certificate: The following statements must be typed in the "Remarks" section of FSIS Form 9060-5 or on the FSIS Letterhead Certificate.

For Beef and Beef Products:

- "1. The United States is recognized by the World Organization of Animal Health (OIE) as a country free from Foot and Mouth Disease and Rinderpest.
- 2. The United States is recognized by the World Animal Health Organization (OIE) as having a Negligible Risk for Bovine Spongiform Encephalopathy in accordance with the pertinent chapter of the Terrestrial Animal Health Code.
- 3. The product was obtained from animals of U.S. origin or from animals and/or products that were legally imported in accordance with U.S. import requirements.
- 4. The cattle from which the fresh meat products destined for export were derived were not subjected to a stunning process, prior to slaughter, with a device injecting compressed air or gas into the cranial cavity, or to a pithing process."

For Fresh/Frozen Poultry Meat:

"There have been no outbreaks of highly pathogenic avian influenza virus (fowl plague) for at least 90 days in the region where the birds were produced or slaughtered. Further, in the region where the birds were produced or slaughtered (such an region being within a minimum radius of 50 kilometers from the production farm), neither Newcastle disease, fowl cholera nor any other serious infectious fowl disease as recognized by the government of the United States, has occurred for at least 90 days."

For Cooked Poultry Meat:

- "1. The poultry meat was not derived from birds slaughtered in the context of an avian influenza or other disease control or eradication program;
- 2. The poultry meat has been subjected to a heat treatment such that the middle of the product reached a temperature of at least 72 degrees Celsius; and

3. The poultry meat product was handled in such a manner that any possibility of contamination of the product by unprocessed poultry material after the heat process, either directly or indirectly, was prevented."

For Fresh/Frozen Pork and Pork Meat Products:

- "1. African swine fever, foot and mouth disease, classical swine fever, and swine vesicular disease have not occurred in the United States of America during the last twelve (12) months.
- 2. The pork and pork products were not derived from swine slaughtered in the context of any disease control or eradication program.
- 3. The pork and pork products were derived from swine of U.S. origin and/or the swine or pork products were legally imported in accordance with U.S. import requirements."

4. Either:

- "i. The products originated from swine tested at slaughter for trichinae in an official laboratory with negative results"; or,
- "ii. The pork was subjected to a freezing process or other process that guarantees the destruction of the parasite (Trichinella spiralis)"; or
- "iii. The pork was derived from swine and swine enterprises that are subject to surveillance conducted in the United States, have a minimal risk for infection from Trichinella spp, and comply with pork quality assurance programs (PQAPlus) that address product wholesomeness and biosecurity as verified by the U.S. Department of Agriculture (USDA)."

For Cooked Pork and Pork Products:

- "5. The pork and pork products were not derived from swine slaughtered in the context of any disease control or eradication program.
- 6. The pork and pork products were derived from swine of U.S. origin and/or the swine or pork products that were legally imported in accordance with U.S. import requirements.
- 7. The pork and pork products have been subjected to a heat treatment process to eliminate salmonella.
- 8. The pork and pork product was handled in such a manner that any possibility of contamination of the product by unprocessed pork material after the heat process, either directly or indirectly, was prevented."

For Wild Boar:

"African Swine Fever, Foot and Mouth Disease, Hog Cholera, Rinderpest and Swine Vesicular Disease have not occurred in the United States of America during the last twelve (12) months.

The products were derived from animals that passed veterinary ante-mortem and post-mortem inspection at the time of slaughter.

The products originate from a USDA inspected slaughter establishment that slaughters animals for human consumption.

The products are sound and fit for human consumption.

The products originated from pigs tested at slaughter for trichinae in an official laboratory with negative results or, alternatively, the meat underwent treatment to destroy trichina according to one of the methods described in 9 CFR 318.10."

For Imported Meat or Poultry Meat or Their Products:

"The meat or poultry or their products were legally imported into the United States in accordance with U.S. import procedures for meat and poultry products."

• Sanitary Certificate for Exports (AMS) – For Dairy Products for Human Consumption (Produced in the United States)

The following standard sanitary certification statements should be included on the certificate:

- "(1) The United States of America is free from Foot and Mouth Disease and Rinderpest.
- (2) The product was manufactured in facilities inspected and approved by the competent authority and subjected to regular audits or inspections aimed at ensuring that the processing is properly and hygienically carried out, to produce a product that is fit for human consumption.
- (3) The product was manufactured from milk or milk products that received a pasteurization treatment or adequate safeguards have been taken with the aim of avoiding public hazards arising from pathogenic organisms associated with milk.
- (4) To the best of our knowledge, the product contains no harmful levels of contaminants."
- Export Certificate for Animal Products (APHIS VS Form 16-4) For Imported Dairy Products for Reexport to Barbados

APHIS Veterinary Services may issue a certificate with the statements detailed under the options below.

For imported dairy products for which an import health certificate was required:

The exporter provides a government-issued veterinary certificate from the originating country giving appropriate statements about the origin of imported materials or how materials were processed in the originating country.

- "1. The products were legally imported into the United States from (name of country) under export certificate (reference the export certificate of the country of origin).
- 2. The product was not processed in the United States."

For imported processed dairy products considered to be of low risk and for which there is no import health certificate requirement:

The exporter provides a copy of the corresponding "entry summary" document issued by the pertinent U.S. customs agency. In addition, a notarized affidavit to support the statements on the VS Form 16-4 issued by APHIS Veterinary Services must be provided.

"This office has on file a notarized affidavit from [insert importer or import broker, manufacturer company name] verifying the accuracy of the statements below:

- 1. The products were legally imported into the United States.
- 2. The product was not processed in the United States."
- Certificate of Analysis (for milk and milk powder)

Must provide a complete chemical analysis of the product.

• Shell Egg Grading Certificate (AMS Form LPS-210S)

In the 'Remarks' section of the LPS-210S, the following statement should appear, "Fit for human consumption" in addition to the seal number that has been placed on the transportation unit.

In addition, a Disease Free Statement specific to Barbados should accompany each shipment of table eggs to Barbados. See Section V for more details.

• Egg Products Export Certificate of Wholesomeness (FSIS Form 9060-5EP)

The following attestation in the remarks section must be checked:

"I CERTIFY that the egg products specified on this form have been inspected and passed in accordance with the applicable laws and regulations of the United States Department of Agriculture and are wholesome and fit for human consumption."

• Phytosanitary Certificate, PPQ Form 577

Exact attestation may vary depending on product and State/region of origin. The following language may serve as an example.

"The products have been inspected and/or tested according to appropriate official procedures and are considered to be free from pests and diseases and conform to the current phytosanitary requirements of Barbados."

For specific attestation requirements please consult with the Barbados Plant Protection Department. Contact information provided in Appendix II.

• Export Certificate for Animal Products (APHIS VS Form 16-4) – For Pet Food

The certification statements provided below should be made in the Additional Declaration section on a VS Form 16-4, and continuation pages VS Form 16-4A, as necessary.

"There has been no outbreak of highly pathogenic avian influenza or velogenic Newcastle disease within a 30 km radius of the manufacturing facility, slaughter facility, or farm of origin for the past 6 months."

This office has on file a notarized affidavit from [company name] verifying the accuracy of the following statements.

- 1. The beef, beef products and/or bovine meal ingredients contained in the products certified herein originated from the United States or were legally imported in accordance with OIE standards for bovine spongiform encephalopathy (BSE).
- 2. The processing plant is authorized by the competent feed authority within the United States to produce and offer the pet food product into commerce and has established procedures under official controls to avoid cross contamination with BSE risk materials. The animal-origin ingredients used to manufacture balanced pet food for dogs and cats derive from animals subjected to official inspection.
- 3. The dry or semi- moist products certified herein were processed in such a way that the ingredients of animal origin have been subjected to a heat treatment of at least to 74°C (165°F) throughout their substance.
- 4. The canned products certified herein have been heat treated in hermetically sealed containers to an F0 of 3.0 or more.
- 5. The products certified herein may be entered into commerce in accord to pertinent regulations of the Federal competent feed authority² and may be sold without restriction in the USA.
- 6. The necessary precautions were taken after heat processing of the certified products to avoid recontamination with pathogenic agents.
- 7. The products certified herein were packed and sealed in new packing/bags at the manufacturing plant and are intended for animal consumption only."
- ¹Please note: The following certification #8 is only required in the event of an outbreak of highly pathogenic avian influenza or velogenic Newcastle disease in the United States. The unnumbered certification statement above the affidavit line is then omitted. Please consult with your VS certifying official before using this alternative certification statement.
- "8. The products certified herein have been sufficiently heat treated to destroy the highly pathogenic avian influenza and Newcastle disease viruses, and the necessary precautions were taken after processing to avoid contact of the commodity with any source of highly pathogenic avian influenza or Newcastle disease viruses."
- ² The product may be entered into commerce pursuant to Section 801(e) of the Federal Food, Drug, and Cosmetic Act.
- Export Certificate for Animal Products (APHIS VS Form 16-4) For Feathers Intended for Ornamental Use

The following certification statements should be provided in the Additional Declarations section of the VS Form 16-4 and continuation page VS form 16-4A as needed.

"This office has on file a notarized affidavit from [company name] verifying the accuracy of the statements below.

U.S. origin product

- 1. The United States or region of origin meets the conditions of the World Animal Health Organization (OIE) to be considered free of highly pathogenic avian influenza and Newcastle disease as defined by the OIE.
- 2. The product originates in the United States.
- 3. The product was heat processed. (Provide processing parameters.)

Imported product

- 1. The product was imported legally in accord with the regulations of the United States pertaining to highly pathogenic avian influenza and Newcastle disease.
- 2. The product was not processed in the United States."
- Export Health Certificate (for fish and seafood products)

No specific attestation is required. Standard attestation preprinted on the certificate is acceptable: "I certify that in compliance with the regulations of the Secretary of Commerce governing the inspection and certification of the product designated herein pursuant to the Act of August 14, 1946, as amended (7 U.S. C. 1621-1627), samples from lots indicated above have been examined in accordance with current regulations and standards and the results are shown above."

- Veterinary Health Certificate for Temporary Export (less than 60 days) of Equines from the United States of America to Barbados
- "1. The United States is free from Foot and Mouth Disease.
- 2. The animal has remained in the USA since birth or entered the country at least 90 days prior to export.
- 3. In so far as it can be possible to ascertain, during the past three (3) months, the horse has not suffered from any of the diseases listed below, nor has this horse during this period been on any premises where these diseases have occurred:

Vesicular Stomatitis, Anthrax, Contagious Equine Metritis, Dourine, Epizootic Lymphangitis, Ulcerative Lymphangitis, Equine Infectious Anaemia, Equine Rhinopneumonitis, Equine Viral Arteritis, Equine Viral Encephalomyelitis, Glanders, Rabies, Scabies, or any other disease of horses statutorily notifiable in the USA.

- 4. Insofar as it can be determined, the animal has not during the past six (6) months been in any country in which Venezuelan Equine Encephalomyelitis has occurred during the past two (2) years.
- 5. Immediately prior to export, the animal underwent a fourteen (14)-day period of quarantine under USDA veterinary supervision on approved premises. During this period, the animal had no contact with any equine not of a similar sanitary status.

At the port of embarkation, a VS port veterinarian shall attach to the U.S. Origin Health Certificate, the Certificate of Inspection of Export Animals (VS Form 17-37) showing:

- 1. The name and address of the consignor.
- 2. The name and address of the consignee.

- 3. The number and species of animals to be shipped.
- 4. A statement that the animals have been given a careful veterinary inspection at the port of embarkation and found in good health and physical condition and free from evidence of any communicable disease and exposure thereto within 48 hours of exportation.

Additional Information

- 1. The Export Health Certificate is issued within seven (7) days of travel.
- 2. A horse outline diagram showing identification markings must be attached to the health certificate.
- 3. The animal must be conveyed directly from the place of isolation to Barbados without coming into contact with horses not similarly certified.
- 4. The vehicle transporting the animal as well as all tack and jockey's gear accompanying the animal must be cleaned and disinfected prior to loading.
- 5. Adequate quantities of feed concentrate for the animal's journey may accompany the animal. Hay (forage) will not be permitted entry as this contravenes the Plant Quarantine Regulations controlling the entry of plant pests and plant diseases.
- 6. Transport of the horse(s) must be in accordance with the Guidelines for the Transport of Animals by Air or by Sea as set out in the OIE Terrestrial Animal Health Code. The crate or container in which the animal will be transported must meet IATA standards.
- 7. In order to minimize the event of an animal becoming distressed during transportation by air, it is highly recommended that an individual experienced in the care and handling of horses accompany the animal during the flight. This will also ensure humane handling of the animal throughout the whole shipping process."
- Veterinary Health Certificate for Export of Equine Semen from the United States of America to Barbados
- "1. The consignment consists wholly of equine semen;
- 2. The United States of America is free from the following diseases according to the specifications for country freedom in the OIE

Terrestrial Animal Health Code (the OIE Code): African Horse Sickness, Venezuelan Equine Encephalomyelitis, Glanders and Dourine.

- 3. The donor animals have lived continuously in the USA since birth or at least three months (90 days), and have been located in the holding of origin for at least 30 days prior to entering the semen collection center;
- 4. On the day(s) of semen collection, all donor animals were examined by the center veterinarian and were free from any clinical evidence of infectious diseases caused by microorganisms transmissible in semen;

- 5. The donor(s):
- a. were kept in an establishment located in a Vesicular Stomatitis free country or zone at the time of collection; OR

were kept for the 30 days prior to, and during, collection in an establishment where no case of Vesicular Stomatitis was reported during that period and were subjected to a diagnostic test for Vesicular Stomatitis with negative results, within the 30 days prior to semen collection;

- b. were kept in a holding free from any type of equine encephalomyelitis, equine infectious anemia, equine viral arteritis, equine herpes virus 1, equine coital exanthema, salmonellosis (Salmonella abortus equi) and contagious equine metritis for at least 30 days prior to semen collection;
- c. were subjected with negative result to an agar gel immunodiffusion test (Coggins test) or other OIE recommended test for Equine Infectious Anemia carried out on a blood sample taken during the past 30 days prior to the date of the collection of semen;
- d. were subjected with negative result to an agent identification test for contagious equine metritis by isolation of Taylorella equigenitalis from samples taken from mucosal surfaces of the penile sheath, the urethra, and the urethral sinus during the past 30 days prior to the date of the collection of semen;
- e. were subjected with negative result to an OIE prescribed test for Equine Viral Arteritis during the past 30 days prior to the date of the collection of semen.
- 6. The semen collection center was free from any quarantine restrictions from at least 60 days before the first semen collection until completion of the donor animal testing for this consignment;
- 7. The donor stallion(s) was/were held at an APHIS approved semen collection center for a continuous period of at least 30 days before collection of semen for this consignment. During this time the donor(s) was/were isolated from animals not of an equivalent health status;
- 8. The semen collection center is approved by APHIS to collect semen for export and is regularly audited by an Official Veterinarian. Date of last inspection:
- 9. The semen was collected, processed and stored under the supervision of a USDA approved semen collection center veterinarian in accordance with the OIE Terrestrial Animal Health Code chapter on semen collection centers (Chapter 4.5 as relevant).

STORAGE AND TRANSPORT

- A. All straws/ampoules/vials are/will be clearly marked indicating the identification of the donor animal(s) and the date of collection;
- B. The semen was not stored with other semen or other biological material not of a similar health status;
- C. Storage was/will be in new or recently cleaned and disinfected containers;
- D. Prior to export, the transport container will be sealed, under the supervision of an Officially Accredited Veterinarian, and the seal number written on the Export Health Certificate.

This certificate is valid for 14 days after issuance."

• Veterinary Health Certificate for Export of Cattle from the United States of America to Barbados

"CERTIFICATION STATEMENTS

- 1. The United States is free of Akabane, Contagious Bovine Pleuropneumonia, Foot and Mouth Disease, Rinderpest, Rift Valley Fever, Lumpy Skin Disease, and Theileriosis.
- 2. The area from which the animals are derived is not under quarantine due to the presence of Boophilus spp. ticks.
- 3. Regarding bovine spongiform encephalopathy (BSE) the following three statements are made:
- a) The United States of America is recognized as country with a negligible BSE risk and complies with the conditions referred to in Article 11.5.4. of the Terrestrial Animal Health Code of the World Organization for Animal Health (OIE) 2012.
- b) Cattle selected for export are identified by a permanent identification system in such a way as to demonstrate that they are not exposed cattle as described in point 3b) of Article 11.5.4.;
- c) Cattle selected for export were born after the date from which the ban on the feeding of ruminants with meat-and-bone meal and greaves derived from ruminants was effectively enforced.
- 4. The animals were born, raised, and have remained in the United States. In the farm of origin and surrounding farms no quarantine due to or clinical cases of infectious or contagious diseases of bovidae has been diagnosed including anthrax, bluetongue, leptospirosis, rabies, and vesicular stomatitis within 120 days prior to export.
- 5. The farms of origin are located in state(s) that is (are) recognized as free of brucellosis and tuberculosis.
- 6. The animals originate from herds free of cases or outbreaks of the following diseases during the past 24 months: bovine leucosis, bovine infectious rhinotracheitis/infectious pustular vulvovaginitis, bovine viral diarrhea, campylobacteriosis, haemorrhagic septicaemia and trichomoniasis.
- 7. The animals were isolated from other animals under the supervision of a USDA-accredited veterinarian, and they remained so for not less than 30 days prior to the date of export.
- 8. Preventive treatments:

All animals 7 days prior to shipment were treated on	, with
, an approved broad-s	pectrum product against endoparasites and with
, an approved product o	against ectoparasites. As treatment against
leptospirosis, all the animals were treated within 7da	ys prior to export with long-acting oxytetracycline
at a dose of 20 mg/kg of live weight (Include product	names, manufacturers, expiration dates.)

9. The animals did not receive any other therapeutic or immunogenic treatment within 14 days prior to export.

- 10. The bovine animals were vaccinated for leptospirosis containing 5 serovars L.canicola, grippotyphosa, haemorrhagiae, hardjo, and icterohaemorrhagiae, blackleg, shipping fever, malignant edema, bovine viral diarrhea, and infectious bovine rhinotracheitis/infectious pustular vulvovaginitis.
- 11. The animals have been inspected by an accredited veterinarian and have been found to be free of fresh or healing wounds, and clinical signs of screwworm.
- 12. The animals originate from a zone which is not under control for screwworm, and have not transited a zone under control for screwworm within the last 60 days.

TEST REQUIREMENTS

All bovine animals must be tested with negative results as prescribed below within 30 days of shipment.

- 1. Tuberculosis: Intradermal test using bovine PPD tuberculin.
- 2. Brucellosis: Card test, complement fixation test, or any other officially recognized test,
- 3. Bovine leukosis: Enzyme-linked immunosorbent assay (ELISA), polymerase chain reaction (PCR) or agar-gel immunodiffusion (AGID) test.
- 4. Paratuberculosis (Johne's disease): Delayed –type hypersensitivity test (DTH) or ELISA.
- 5. Infectious bovine rhinotracheitis: ELISA or serum neutralization (SN) at 1:8 or vaccination. Vaccinated animals must be certified as such.
- 6. Campylobacteriosis:

Non virgin females: Either fluorescent antibody test or culture of vaginal mucus. Virgin females are exempt.

Males: Fluorescent antibody test of preputial washings or culture of vaginal mucus. Males that have never been used for natural breeding or have only mounted virgin females are exempt from this requirement.

If no test is performed, an additional certification statement must be provided indicating this condition.

7. Trichomoniasis:

Non virgin females: Either direct observation using dark field contrast microscopy or culture of vaginal mucus. Virgin females are exempt.

Males: Direct observation using dark field contrast microscopy and culture of preputial smegma. Males that have never been used for natural breeding or have only mounted virgin females are exempt from this requirement.

If no test is performed, an additional certification statement must be provided indicating this condition.

8. Bluetongue: ELISA, AGID, Virus Neutralization or PCR.

EMBARKATION STATEMENTS

At the port of embarkation, a VS port veterinarian must attach to the Origin Health Certificate the Certificate of Inspection of Export Animals (VS Form 17-37) showing:

- 1. The name and address of the consignor.
- 2. The name and address of the consignee.
- 3. The number, sex, breed and categories of animals to be shipped.
- 4. A statement certifying that "the animals for export have been given a careful veterinary inspection at the port of embarkation and found to be clinically healthy, free from evidence of communicable disease, nor did they have tumors, fresh wounds or wounds in the process of healing, or ectoparasites within 24 hours of exportation."

OTHER INFORMATION

- 1. In order to import live animals into Barbados, the importer must obtain an import permit from Barbados Ministry of Agriculture and Food Security, Veterinary Services not less than 30 days prior to the date of embarkation.
- 2. The U.S. Origin Health Certificate is valid for 30 days from the date of issuance although this can be extended to 45 days if the animals have remained healthy and in isolation from other animals and the accredited veterinarian so certifies.
- 3. No animal, semen, fertilized ova, products, or equipment other than those listed on the import permit may be included in the shipment.
- 4. The animals must not transit any country in route to Barbados. In case of extreme necessity, it is indispensable to have a special permit from Barbados Ministry of Agriculture and Food Security, Veterinary Services.
- 5. It is strongly recommended that the cattle be injected with Imizol® at the manufacturer's recommended dosage on the day of arrival as prevention against bovine babesiosis."
- Veterinary Health Certificate for Export of Goats from the United States of America to Barbados
- "1. The United States is free of foot-and-mouth disease, sheep and goat pox, peste des petits ruminants, and contagious caprine pleuropneumonia.
- 2. The animals were born and raised in the United States or were resident for not less than 12 months.
- 3. As far as can be ascertained and after due inquiry, no clinical or other evidence of bluetongue, brucellosis (B. mellitensis), caseous lymphadenitis, foot rot, contagious agalactia, paratuberculosis, salmonellosis (Salmonella abortusovis), or tuberculosis has been diagnosed in the herds of origin in the last three (3) years.
- 4. As far as can be ascertained and after due inquiry, no clinical or other evidence of rabies has been diagnosed in the herds of origin in the last 6 months.
- 5. The animals are in good health, physically sound, and free from signs of infectious diseases.

- 6. The animals are identified with permanent identification which allows them to be traced back to their dam and herd of origin.
- 7. The animals originate from herds where no cases of caprine-arthritis encephalitis (CAE) or Maedi-Visna have been recorded, neither clinically nor serologically, for the past three years and no animal from a herd of inferior health status was introduced into these herds during that period.
- 8. While in isolation, the animals over one year of age have been tested for CAE and Maedi Visna with negative results. (See Testing Requirement No. 5).
- 9. The following statements are made in regard to scrapie:
- a) Ovine scrapie is a reportable disease in United States
- b) The animals are originated from a country that adopts the measures recommended by the OIE Terrestrial Code for the control and eradication of ovine scrapie.
- c) The animals and their direct ancestry were born and raised in United States or in another country with

equal or better health condition with respect to scrapie.

- d) In accordance with the OIE Terrestrial Code, the animals:
- i. Have been permanently identified to enable trace back to their establishment of origin.
- ii. Showed no clinical sign of scrapie at the time of inspection.
- 10. There have been no diagnosed cases of scrapie in the herd of origin during the 5 years prior to exportation. During this time, the herd has not been designated a scrapie infected or source herd and is not currently designated a scrapie exposed herd.
- 11. The animals originated from farms where no cases of contagious agalactia have been reported within 6 months prior to exportation.
- 12. The animals showed no clinical signs of CAE, Maedi-Visna, scrapie or contagious agalactia on the date of inspection.
- 13. [For animals originating from bluetongue free states or zones (year round)]; The animals originated from herds where there has been no clinical evidence of bluetongue during the last two years (Also See Testing

Requirement No. 4.), and either

- a. did not travel through a bluetongue infected zone during transportation to the place of shipment., or
- b. were protected from attack from Culicoides likely to be competent BTV vectors at all times when transiting through an infected zone.
- 14. [For animals originating from bluetongue seasonally free states or zones (from October 15th to March 31st)]: The animals originated from herds where there has been no clinical evidence of

bluetongue during the last two years in areas considered seasonally free from bluetongue (Also see Testing Requirement No. 4). The bluetongue-free season has been in effect for at least 60 days immediately prior to shipment and either:

V 1 1
a. did not travel through a bluetongue infected zone during transportation to the plane or shipment, or
b. were protected from attack from Culicoides likely to be competent BTV vectors at all times when
transiting through an infected zone.
15. The animals were treated with, an approved ectoparasiticide, on which is within seven (7) days prior to export. (The date and product used must be noted on the health certificate.)
16. The animals were treated with, a product approved for internal parasites (including coccidia) onwhich is within seven (7) days prior to export. (The date and product used must be noted on the health certificate.)
17. In lieu of testing for leptospirosis, the animals were treated prophylactically with oxytetracycline, on [date] which is within one week of embarkation.
18. The animals have been given a complete course of vaccination within 20-60 days prior to export against Blackleg, Malignant Oedema, Enterotoxaemia, Tetanus, and Pasteurella multocida.
19. Prior to export, the animals were isolated for 30 days in a facility approved and under the supervision of a USDA accredited veterinarian.

TEST REQUIREMENTS

The animal(s) was (were) tested within 30 days of embarkation to Barbados with negative results for the following diseases (the dates of the tests must be on the certificate):

- 1. Tuberculosis: Intradermal tuberculin test.
- 2. Brucellosis (B. mellitensis): Standard plate test at 1:50 dilution or other approved serological test.
- 3. Leptospirosis: Microtiter agglutination test at 1:400 dilution for Leptospira pomona, L. icterohaemorrhagiae, L.grippotyphosa, L. hardjo, and L. canicola. [OR provide Certification Statement No. 17 with regard to prophylactic treatment.]
- 4. Bluetongue: Agar gel immunodiffusion (AGID) test or ELISA or PCR.
- 5. CAE /Maedi-Visna: AGID test OR ELISA (as per certification statement No.8)

EMBARKATION STATEMENT

At the port of embarkation, a VS port veterinarian must attach to the U.S. Origin Health Certificate, the Certificate of Inspection of Export Animals (VS Form 17-37) showing:

- 1. The name and address of the consignor.
- 2. The name and address of the consignee.

- 3. The number, species, and identification of the animals to be shipped.
- 4. A statement that the animals have been given a careful veterinary inspection at the port of embarkation and found free from evidence of communicable disease and exposure thereto within 24 hours of exportation.

OTHER INFORMATION

- 1. The animals must be accompanied by an import permit issued by the Senior Veterinary Officer, Veterinary Services, Ministry of Agriculture and Food Security, Barbados.
- 2. The U.S. Origin Health Certificate is valid for 30 days from the date of issuance although this can be extended to 45 days if the animals have remained healthy and in isolation from other animals and the accredited veterinarian so certifies.
- 3. The animals must be shipped in new clean containers and have no direct or indirect contact with other livestock during transportation to Barbados.
- 4. Upon entry into Barbados all animals must be quarantined on premises previously approved by the Senior Veterinary Officer for a minimum period of thirty days.
- 5. Areas of the United States considered low risk for bluetongue include the following States: (Year round) Alaska, Connecticut, Delaware, Hawaii, Indiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Montana, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, Vermont, Wisconsin, and West Virginia. (October 15 to March 31) Colorado, Idaho, Illinois, Iowa, Kansas, Kentucky, Missouri, Nebraska, New Mexico, North Carolina, Oklahoma, Oregon, South Dakota, Tennessee, Utah, Virginia, Washington, and Wyoming."
- Veterinary Health Certificate for Export of Swine from the United States of America to Barbados
- "1. The United States is free of Foot and Mouth Disease, Swine vesicular disease, Classical Swine Fever, African swine fever, and Teschen's disease.
- 2. The animals originated from herds free of clinical evidence of the following diseases during the past twelve (12) months: Clostridial enteritis, proliferative ileitis syndrome, Tuberculosis, Leptospirosis, Erysipelas, Transmissible gastro-enteritis (TGE), Glasser's disease, Vibrionic dysentery (haemorrhagic dysentery), Atrophic rhinitis, Mycoplasma pneumonia, Swine influenza, Porcine Reproductive and Respiratory syndrome (PRRS), Mange, Kidney worm, Porcine parvovirus, Salmonellosis (S. cholerasuis). Aujesky's disease (Pseudorabies/PRV), Porcine Epidemic Diarrhea and Rabies.
- 3. (a) The animals must originate from certified brucellosis free herd, or a herd in a certified Brucellosis-free state, OR
- (b) All animals over six (6) months of age in the herd of origin were tested with negative results for Brucellasuis on _____(date) being within six (6) months of the date of export.
- 4. The animals originate from a State considered free of PRV in commercial production swine herds.
- 5. The owner has certified that the animals on his farm have never been fed garbage.

- 6. The animals are physically sound and free from any clinical signs of infectious and contagious diseases.
 7. Within seven (7) days of exportation, the animals were treated for internal and external parasites with an USDA approved product(s).
 8. The animals for export have been treated with long acting oxytetracycline at a rate of 20mg/kg body weight on _______twice at 14 day interval. The second treatment must be performed within 3 days ______ (date) prior to shipment.
 9. All crates and vehicles used for shipping the animals will be properly cleaned and disinfected prior to use.
 10. The animals to be exported have been isolated from the remainder of the herd of origin for at least thirty (30) days prior to export.
 11. Import permit number: "
- U.S. Health Certificate To Export Poultry Hatching Eggs To Barbados
- "The undersigned official veterinarian, authorized thereto by Veterinary Services, Animal and Plant Health Inspection Service, of the United States of America, certifies the following with regard to the hatching poultry eggs to be exported to Barbados:
- 1. The flocks and the hatcheries from where the shipment described originated, were inspected within the past thirty (30) days and, as a result of careful physical examination, were found free from evidence of infectious and contagious diseases and, in so far as could be determined, have not been exposed to infectious coryza, acute fowl cholera, fowl plague (highly pathogenic avian influenza), fowl pox, fowl typhoid (S. gallinarum), infectious laryngotracheitis, infectious synovitis (Mycoplasma synoviae), Newcastle disease (avian pneumoencephalitis), ornithosis (psittacosis), pullorum disease, tuberculosis, egg drop syndrome virus, Arizona disease, avian encephalomyelitis, chronic respiratory disease (Mycoplasma gallisepticum), infectious bronchitis, avian leukosis (including Marek's disease), big liver spleen disease, vibrionic hepatitis, or infectious bursal disease; and none of these diseases have been diagnosed by serological testing or other method within the flock(s) of origin during the last six months.
- 2. Hatching eggs are from flocks participating in the National Poultry Improvement Plan and the flocks certified as free from: Salmonella pullorum, S. gallinarum, Mycoplasma synoviae, M. gallisepticum and Salmonella enteritidis.
- 3. There has been no direct and/or indirect contact between the birds in the flock of origin and any other birds including feral and migratory birds.
- 4. No live vaccine for Newcastle Disease or any other live vaccines have been used on the supply flock(s) at any time during the three months before collection of the eggs.

- 5. During the usual routine inspection of the flock(s) of origin there was no visible evidence of communicable diseases.
- 6. There has been no outbreak of Newcastle disease or fowl plague (avian influenza) within a radius of thirty (30) kilometers of the flock(s) of origin in the past six (6) months.
- 7. The eggs were disinfected and packed in new, clean containers with an official USDA seal."
- U.S. Health Certificate To Export Poultry Day-Old Chicks To Barbados
- "The undersigned official veterinarian, authorized thereto by Veterinary Services, Animal and Plant Health Inspection Service, of the United States of America, certifies the following with regard to day old chicks to be exported to Barbados:
- 1. The flocks and the hatcheries from where the shipment described originated, were inspected within the past thirty (30) days and, as a result of careful physical examination, were found free from evidence of infectious and contagious diseases and, in so far as could be determined, have not been exposed to infectious coryza, acute fowl cholera, fowl plague (highly pathogenic avian influenza), fowl pox, fowl typhoid (S. gallinarum), infectious laryngotracheitis, infectious synovitis (Mycoplasma synoviae), Newcastle disease (avian pneumoencephalitis), ornithosis (psittacosis), pullorum disease, tuberculosis, egg drop syndrome virus, Arizona disease, avian encephalomyelitis, avian reticuloendotheliosis, chronic respiratory disease (Mycoplasma gallisepticum), infectious bronchitis, avian leukosis (including Marek's disease), big liver spleen disease, vibrionic hepatitis, or infectious bursal disease; and none of these diseases have been diagnosed by serological testing or other method within the flock(s) of origin during the last six months.
- 2. Day-old chicks originate from flocks participating in the National Poultry Improvement Plan and the flocks certified as free from: Avian influenza, Salmonella pullorum, S. gallinarum, Mycoplasma synoviae, M. gallisepticum and Salmonella enteritidis.
- 3. There has been no direct and/or indirect contact between the birds in the flock of origin and any other birds including feral and migratory birds.
- 4. No live vaccine for Newcastle Disease or any other live vaccines have been used on the supply flock(s) at any time during the three months before collection of the eggs.
- 5. During the usual routine inspection of the flock(s) of origin there was no visible evidence of communicable diseases.
- 6. There has been no outbreak of Newcastle disease or fowl plague (avian influenza) within a radius of thirty (30) kilometers of the flock(s) of origin in the past six (6) months.

- 7. Day-old chicks are transported in new, clean containers with an official USDA seal.
- 8. The Veterinary Services Department must be notified of the expected time of arrival of the day-old chicks to facilitate inspection at the port of entry by an Officer of this Department."
- Health Certificate To Export Honeybee Queens Apis Mellifera From The United States To Barbados
- "1. The United States of America or the state of origin is free from reports or the Asian honey bee (Apis cerana) or Asian honey bee hybrids and free from reports of the African honey (Apis mellifera scutellata) and Africanized honey bees hybrids including European honey bee hybrids with Africanized bees.
- 2. The parasitic mites Varroa jacobsoni, Acarapis woodi and Tropilaelaps clareae and apmyiasis are not known to occur in the country or state of origin.
- 3. All queens originate from colonies were inspected within 90 days of export by a qualified Official Inspector and found to be free from clinical evidence of American foulbrood (AFB), European foulbrood (EFB),

Nosemosis, Sacbrood disease, chalkbrood disease and all other regulated infectious or contagious diseases.

- 4. Colonies were assessed for Varroa mites (Varroa destructor) by alcohol washing of bee samples (minimum 5% colonies or 200-300 bees/colony) and either (specify):
- a) Varroa was not detected, or was under 1% bees tested, or
- b) Varroa was detected in over 1% bees tested and the bee colonies in the queen rearing apiaries were treated with _______, a product that is registered in the United States. Treated colonies were retested prior to collecting the queens and attendants to confirm that the level of Varroa is below 1%.
- 5. Within 90 days of export, all packing and shipping location(s) on the apiary premises from which queen bees are derived were inspected by an Official Inspector for small hive beetle (Aethina tumida), with negative results.
- [All materials for shipping must be prepared and stored in the small hive beetle free inspected location(s) on the apiary premises until use. If any shipping materials (including but not limited to shipping boxes and queen cages) are prepared in advance of the shipment date, they must be stored for a minimum of 72 hours prior to shipment in a freezer at 0F (-18C) located in the inspection location(s)].
- 6. All queens and attendants were caught and placed in new queen cages with ventilation holes no larger than 2mm x 2mm or if longer than 2mm are no wider than 1mm. Worker bee attendants (2-6 attendants per queen) were placed in individual queen cages with the queen and not loose in a battery box. Queen cages filled with queens and attendants were stored in a designated and inspected packing and shipping location(s) until shipping.

- 7. Food supplies to the bees during transit [does not contain honey] or [contains honey which has been irradiated to approved levels]. (Please indicate whichever is appropriate)."
- Veterinary Health Certificate for Export of Hedgehogs from the United States of America to Barbados "Certification Statements:
- 1. The animals originated from premises where no outbreaks of respiratory or enteric disease(s) or any other contagious or infectious diseases affecting these animals have occurred in the past six (6) months.
- 2. The animals have been examined and found to be free of clinical signs of cutaneous mite infestation within 5 days prior to export.
- 3. The animals have been examined and found free of visible ectoparasites within the 5 days prior to export AND have been treated for ectoparasites with an approved preparation (give name and date of treatment) not more than 14 days prior to export.

Treatment:	Date:
4. The animals are free from internal parasites (include verified by laboratory tests OR have been treated with names of preparations used and date(s) of treatment(s)	approved preparations (list test date or give

- 5. The animals originated and have been kept in a region that is free of foot-and-mouth disease.
- 6. The animals showed no signs of contagious or infectious diseases within the 5 days prior to shipment.
- 7. The animals have not commingled with other hedgehogs not of a similar sanitary status.

Other information:

- *I. The animals must be shipped in new containers free from vegetative matter.*
- II. Forty-eight (48) hours' notice of arrival of the animals must be forwarded to the Barbados Ministry of Agriculture."

Section IV. Government Certificate's Legal Entry Requirements

As a general rule, and with the exception of the certificate of analysis required for milk and milk powder, all certificates must be issued by a Federal authority and must be originals. Moreover, all certificates must accompany the product at the time of entry and are valid only for one specific shipment. However, if the products are of the same batch and this can be verified then officials may allow certificates to cover different shipments.

Export Certification documents FSIS form 9060-5 and accompanying letterhead certificates require the signature of an FSIS official veterinarian.

Similarly, certificates for live animals must be issued by an accredited veterinarian authorized by the U.S. Department of Agriculture (USDA) and endorsed by a Veterinary Services (VS) veterinarian.

Section V. Other Certification/Accreditation Requirements to Ensure Market Entry

Live plants and plant products, live animals, meat and poultry products, dairy products, egg products, and other animal products require importers to obtain a valid permit from the Barbados Ministry of Agriculture and Food Security prior to import. Normally, these import permits will specify the requirements that must be met in order to import a specific product into Barbados. U.S. exporters should work closely with their importer in Barbados to ensure a valid import permit has been obtained prior to all shipments.

In addition to the certification requirements outlined above, following are additional certification requirements for select products.

• Meat and Poultry Export Certificate of Wholesomeness (FSIS Form 9060-5) & Letterhead Certificate

For fresh/frozen poultry meat. If the poultry product transits a third country between leaving the United States and entering Barbados, pre-approval must be obtained by the importer of the product from the Veterinary Services/Barbados. In addition, the container must be sealed with an official USDA seal and the seal number must be indicated in the "Remarks" section of the FSIS Form 9060-5.

• Shell Egg Grading Certificate (AMS Form LPS-210S)

being infected with SE, including SE phage type 4.

The following Disease Free Statement should accompany each shipment of table eggs to Barbados.

"Dised	ase Free Certification Statement for Barbo	udos
Shell	Egg Grading Certificate No. SEA	Dated:
1. The standa		ordance with 7 CFR Part 56 to meet U.S. grade
	ring the usual routine inspection of the floci unicable diseases on	k(s) of origin there was no visible evidence of (Date(s)).

- 3. The shell eggs covered by this certificate were produced by birds originating from National Poultry Improvement Plan breeding flocks certified as free of Salmonella pullorum, S. gallinarum, Mycoplasma synoviae, and M. gallisepticum."
- Phytosanitary Certificate, PPQ Form 577

Note: Phytosanitary certificates generated electronically by the Phytosanitary Certificate Issuance and Tracking (PCIT) system, will not list the prefix "FPC" before the phytosanitary number, and will contain a QR code on the left side of the Additional Declaration Section.

Phytosanitary certificates issued using the four (4) part paper format (typewritten or handwritten) will include the prefix "FPC" before the phytosanitary number, and will not include a QR code in the Additional Declaration section.

Both PC formats are currently acceptable. The majority of phytosanitary certificates are issued using PCIT.

• Export Certificate for Animal Products (APHIS VS Form 16-4) – For Pet Food

For the importation of any animal feed, the Veterinary Services Department requires appropriate certification by APHIS Veterinary Services (VS). A notarized affidavit from the manufacturer is required to support these statements on the export certificate issued by APHIS Veterinary Services.

The product must be labeled as pet food and must show a list of raw materials or ingredients and the nutritional information. The Government of Barbados also requests that the product label provide country of origin information.

• Veterinary Health Certificate for Export of Cattle from the United States of America to Barbados

Permission to Import

A valid Import Permit issued by the Senior Veterinary Officer must accompany all animals entering Barbados. Application forms may be obtained from The Veterinary Services, Ministry of Agriculture and Rural Development, The Pine, St Michael, Barbados.

The animals must be imported directly from the exporting country.

At least forty-eight (48) hours notice of arrival of the animals must be given to the Veterinary Services Barbados.

On arrival in Barbados, each animal shall be examined by a Veterinary Officer, who shall place the animals in quarantine for such period, as he/she shall determine. Under the law, all expenses pertaining to quarantine shall be borne by the owner or his agent.

A Memorandum of Understanding between the importer and the Barbados Veterinary Services must be signed at the time the import permit is issued.

Veterinary Health Certificate

The bovine animals must be accompanied by a U.S. Origin Health Certificate, issued by an accredited veterinarian authorized by the U.S. Department of Agriculture (USDA) and endorsed by a Veterinary Services (VS) veterinarian.

The certificate must contain the name and address of the consignor and the consignee, and complete permanent identification (ear tag, tattoo, iron brand, and/or microchip) including number, breed, age, and sex of each animal to be exported.

• Health Certificate To Export Honeybee Queens Apis Mellifera From The United States To Barbados

The shipment must be accompanied by a certificate issued within 14 days of export and endorsed by the United States Department of Agriculture, Animal and Plant Health Inspection Service (USDA, APHIS).

Additional Information:

The shipment will be inspected in Barbados at the port of entry and released subject to documentary and physical inspection.

- 2. The failure of the shipment to meet all the conditions of this permit or a lack of appropriate certification may result in destruction of the shipment.
- 3. The certificate must be in English and the certificate number must appear on all pages of the certificate as well as the official stamp of the certifying authority.
- 4. At least forty-eight hours (48 hours) notification of the arrival of the shipment must be forwarded to the Veterinary Services.

Veterinary Health Certificate for Temporary Export (less than 60 days) of Equines from the United States of America to Barbados

			唐 三
Veterinary Authority	Date Of Issue	Certificate Number	
UNITED STATES DEPARTMENT OF AGRICULTURE			Some

Certification Statements:

1. The United States is free from Foot and Mouth Disease.

Select appropriate statement:

- 2. The animal has remained in the USA since birth or entered the country at least 90 days prior to export.
- 3. In so far as it can be possible to ascertain, during the past three (3) months, the horse has not suffered from any of the diseases listed below, nor has this horse during this period been on any premises where these diseases have occurred: Vesicular Stomatitis, Anthrax, Contagious Equine Metritis, Dourine, Epizootic Lymphangitis, Ulcerative Lymphangitis, Equine Infectious Anaemia, Equine Rhinopneumonitis, Equine Viral Arteritis, Equine Viral Encephalomyelitis, Glanders, Rabies, Scabies, or any other disease of horses statutorily notifiable in the USA.
- 4. Insofar as it can be determined, the animal has not during the past six (6) months been in any country in which Venezuelan Equine Encephalomyelitis has occurred during the past two (2) years.
- Immediately prior to export, the animal underwent a fourteen (14)-day period of quarantine under USDA veterinary supervision on approved premises. During this period, the animal had no contact with any equine not of a similar sanitary status.
- The animal has been inspected by an accredited veterinarian and has been found to be free of fresh or healing wounds, and clinical signs of screwworm.

_	_a) The animal has been fully vaccinated with inactivated vaccines against Equine Influenza (A1 and A2), and against Equine Rhinopneumonitis, having received two (2) inoculations given twenty-eight (28) days apart, the
	last dose not more than sixty (60) days and not less than seven (7) days prior to export;
	Dates of vaccinations (dd/mm/yy):;,
	OR
	b) I have seen a valid vaccination certificate showing that the animal has received a vaccination against Equine
	Influenza (A1 and A2) and against Equine Rhinopneumonitis, AND the animal has been given a booster
	vaccination using an inactivated vaccine not less than 7 days and not more than 60 days prior to export.
	Dates of vaccinations (dd/mm/vy):

- 8. The animal has not been vaccinated against Equine Encephalomyelitis during the past thirty (30)-days and there has been no outbreak of Equine Encephalomyelitis within a thirty (30)-kilometer radius of the place of isolation in the past six (6) months.
- 9. Not less than seven (7) days after commencement of pre-export isolation, samples were taken from the horse and sent to a USDA-approved laboratory where they were subjected to the following tests with a negative result in each case:
 - a. The Agar Gel Immunodiffusion (Coggins) Test for Equine Infectious Anemia
 - The Virus Neutralization (VN) test for Vesicular Stomatitis: OR, ___ The Enzyme-linked Immunosorbent Assay (ELISA) test.
- 10. Within seven (7) days of export, the animal underwent a nasal swab test with negative result to detect the presence of virus shedding of Equine Influenza virus: RT-PCR or 'Directigen Flu®' Test (Becton Dickenson)).
- 11. The animal was treated with Government approved formulations for internal and external parasites within seven (7) days of export.

Veterinary Authority

EMBARKATION STATEMENT

At the port of embarkation, a VS port veterinarian shall attach to the U.S. Origin Health Certificate, the Certificate of Inspection of Export Animals (VS Form 17-37) showing:

- 1. The name and address of the consignor.
- 2. The name and address of the consignee.
- The number and species of animals to be shipped.
- 4. A statement that the animals have been given a careful veterinary inspection at the port of embarkation and found in good health and physical condition and free from evidence of any communicable disease and exposure thereto within 48 hours of exportation.

Additional Information

- 1. The Export Health Certificate is issued within seven (7) days of travel.
- 2. A horse outline diagram showing identification markings must be attached to the health certificate.
- The animal must be conveyed directly from the place of isolation to Barbados without coming into contact with horses not similarly certified.
- 4. The vehicle transporting the animal as well as all tack and jockey's gear accompanying the animal must be cleaned and disinfected prior to loading.
- Adequate quantities of feed concentrate for the animal's journey may accompany the animal. Hay (forage) will not be permitted entry as this contravenes the Plant Quarantine Regulations controlling the entry of plant pests and plant diseases.
- 6. Transport of the horse(s) must be in accordance with the Guidelines for the Transport of Animals by Air or by Sea as set out in the OIE Terrestrial Animal Health Code. The crate or container in which the animal will be transported must meet IATA standards.
- 7. In order to minimise the event of an animal becoming distressed during transportation by air, it is highly recommended that an individual experienced in the care and handling of horses accompany the animal during the flight. This will also ensure humane handling of the animal throughout the whole shipping process.

Semen co	ollection	center i	nf	ormat	ion
----------	-----------	----------	----	-------	-----

Name:	
Address:	
Registration number:	

- 1. The consignment consists wholly of equine semen;
- The United States of America is free from the following diseases according to the specifications for country freedom in the OIE
 Terrestrial Animal Health Code (the OIE Code): African Horse Sickness, Venezuelan Equine Encephalomyelitis, Glanders and Dourine.
- 3. The donor animals have lived continuously in the USA since birth or at least three months (90 days), and have been located in the holding of origin for at least 30 days prior to entering the semen collection center;
- 4. On the day(s) of semen collection, all donor animals were examined by the center veterinarian and were free from any clinical evidence of infectious diseases caused by microorganisms transmissible in semen;
- 5. The donor(s):
 - a. were kept in an establishment located in a Vesicular Stomatitis free country or zone at the time of collection; OR
 - were kept for the 30 days prior to, and during, collection in an establishment where no case of Vesicular Stomatitis was reported during that period and were subjected to a diagnostic test for Vesicular Stomatitis with negative results, within the 30 days prior to semen collection;
 - b. were kept in a holding free from any type of equine encephalomyelitis, equine infectious anemia, equine viral arteritis, equine herpes virus 1, equine coital exanthema, salmonellosis (*Salmonella abortus equi*) and contagious equine metritis for at least 30 days prior to semen collection;
 - c. were subjected with negative result to an agar gel immunodiffusion test (Coggins test) or other OIE recommended test for Equine Infectious Anemia carried out on a blood sample taken during the past 30 days prior to the date of the collection of semen;
 - d. were subjected with negative result to an agent identification test for contagious equine metritis by isolation of *Taylorella equigenitalis* from samples taken from mucosal surfaces of the penile sheath, the urethra, and the urethral sinus during the past 30 days prior to the date of the collection of semen;
 - e. were subjected with negative result to an OIE prescribed test for Equine Viral Arteritis during the past 30 days prior to the date of the collection of semen.

Veterinary Health Certificate for Export of Equine Semen from the United States of America to Barbados

Veterinary Authority	Date Of Issue	Certificate Number	
UNITED STATES DEPARTMENT OF AGRICULTURE			1600

Certification Statements:

- 6. The semen collection center was free from any quarantine restrictions from at least 60 days before the first semen collection until completion of the donor animal testing for this consignment;
- 7. The donor stallion(s) was/were held at an APHIS approved semen collection center for a continuous period of at least 30 days before collection of semen for this consignment. During this time the donor(s) was/were isolated from animals not of an equivalent health status:
- 8. The semen collection center is approved by APHIS to collect semen for export and is regularly audited by an Official Veterinarian.

 Date of last inspection: ______
- 9. The semen was collected, processed and stored under the supervision of a USDA approved semen collection center veterinarian in accordance with the OIE Terrestrial Animal Health Code chapter on semen collection centers (Chapter 4.5 as relevant).

STORAGE AND TRANSPORT

- A. All straws/ampoules/vials are/ will be clearly marked indicating the identification of the donor animal(s) and the date of collection;
- B. The semen was not stored with other semen or other biological material not of a similar health status;
- C. Storage was/ will be in new or recently cleaned and disinfected containers;
- D. Prior to export, the transport container will be sealed, under the supervision of an Officially Accredited Veterinarian, and the seal number written on the Export Health Certificate.

This certificate is valid for 14 days after issuance.

Veterinary Health Certificate for Export of Cattle from the United States of America to Barbados

Veterinary Authority
UNITED STATES DEPARTMENT OF AGRICULTURE

Date Of Issue

Certificate Number

- 1. The United States is free of Akabane, Contagious Bovine Pleuropneumonia, Foot and Mouth Disease, Rinderpest, Rift Valley Fever, Lumpy Skin Disease, and Theileriosis.
- 2. The area from which the animals are derived is not under quarantine due to the presence of *Boophilus spp*. ticks.
- 3. Regarding bovine spongiform encephalopathy (BSE) the following three statements are made:
 - a) The United States of America is recognized as country with a negligible BSE risk and complies with the conditions referred to in Article 11.5.4. of the Terrestrial Animal Health Code of the World Organization for Animal Health (OIE) 2012.
 - b) Cattle selected for export are identified by a permanent identification system in such a way as to demonstrate that they are not exposed cattle as described in point 3b) of Article 11.5.4.;
 - c) Cattle selected for export were born after the date from which the ban on the feeding of ruminants with meatand-bone meal and greaves derived from ruminants was effectively enforced.
- 4. The animals were born, raised, and have remained in the United States. In the farm of origin and surrounding farms no quarantine due to or clinical cases of infectious or contagious diseases of bovidae has been diagnosed including anthrax, bluetongue, leptospirosis, rabies, and vesicular stomatitis within 120 days prior to export.
- 5. The farms of origin are located in state(s) that is (are) recognized as free of brucellosis and tuberculosis.
- The animals originate from herds free of cases or outbreaks of the following diseases during the past 24 months: bovine leucosis, bovine infectious rhinotracheitis/infectious pustular vulvovaginitis, bovine viral diarrhea, campylobacteriosis, haemorrhagic septicaemia and trichomoniasis.
- The animals were isolated from other animals under the supervision of a USDA-accredited veterinarian, and they remained so for not less than 30 days prior to the date of export.
- 12. The animals originate from a zone which is not under control for screwworm, and have not transited a zone under control for screwworm within the last 60 days.

Veterinary Health Certificate for Export of Cattle from the United States of America to Barbados

Test Requirements

All bovine animals must be tested with negative results as prescribed below within 30 days of shipment.

- 1. Tuberculosis: Intradermal test using bovine PPD tuberculin.
- 2 Brucellosis: Card test, complement fixation test, or any other officially recognized test.
- Bovine leukosis: Enzyme-linked immunosorbent assay (ELISA), polymerase chain reaction (PCR) or agar-gel immunodiffusion (AGID) test.
- 4. Paratuberculosis (Johne's disease): Delayed –type hypersensitivity test (DTH) or ELISA.
- Infectious bovine rhinotracheitis: ELISA or serum neutralization (SN) at 1:8 or vaccination. Vaccinated animals must be certified as such.
- 6. Campylobacteriosis:

Non virgin females: Either fluorescent antibody test or culture of vaginal mucus. Virgin females are exempt. Males: Fluorescent antibody test of preputial washings or culture of vaginal mucus. Males that have never been used for natural breeding or have only mounted virgin females are exempt from this requirement. If no test is performed, an additional certification statement must be provided indicating this condition.

Trichomoniasis:

Non virgin females:

Either direct observation using dark field contrast microscopy or culture of vaginal mucus. Virgin females are exempt. Males: Direct observation using dark field contrast microscopy and culture of preputial smegma. Males that have never been used for natural breeding or have only mounted virgin females are exempt from this requirement. If no test is performed, an additional certification statement must be provided indicating this condition.

8. Bluetongue: ELISA, AGID, Virus Neutralization or PCR.

Other information:

- In order to import live animals into Barbados, the importer must obtain an import permit from Barbados Ministry of Agriculture, Veterinary Services not less than 30 days prior to the date of embarkation.
- The U.S. Origin Health Certificate is valid for 30 days from the date of issuance although this can be extended to 45 days if the animals have remained healthy and in isolation from other animals and the accredited veterinarian so certifies.
- No animal, semen, fertilized ova, products, or equipments other than those listed on the import permit may be included in the shipment.
- The animals must not transit any country in route to Barbados. In case of extreme necessity, it is indispensable to have a special permit from Barbados Ministry of Agriculture, Veterinary Services.
- 5. It is strongly recommended that the cattle be injected with Imizol® at the manufacturer's recommended dosage on the day of arrival as prevention against bovine babesiosis.

Veterinary Health Certificate for Export of Goats from the United States of America to Barbados

Veterinary Authority
UNITED STATES DEPARTMENT OF AGRICULTURE

Date Of Issue Certificate Number

- 1. The United States is free of foot-and-mouth disease, sheep and goat pox, peste des petits ruminants, and contagious caprine pleuropneumonia.
- 2. The animals were born and raised in the United States or were resident for not less than 12 months.
- 3. As far as can be ascertained and after due inquiry, no clinical or other evidence of bluetongue, brucellosis (*B. mellitensis*), caseous lymphadenitis, foot rot, contagious agalactia, paratuberculosis, salmonellosis (*Salmonella abortusovis*), or tuberculosis has been diagnosed in the herds of origin in the last three (3) years.
- 4. As far as can be ascertained and after due inquiry, no clinical or other evidence of rabies has been diagnosed in the herds of origin in the last 6 months.
- 5. The animals are in good health, physically sound, and free from signs of infectious diseases.
- 6. The animals are identified with permanent identification which allows them to be traced back to their dam and herd of origin.
- 7. The animals originate from herds where no cases of caprine-arthritis encephalitis (CAE) or Maedi-Visna have been recorded, neither clinically nor serologically, for the past three years and no animal from a herd of inferior health status was introduced into these herds during that period.
- 8. While in isolation, the animals over one year of age have been tested for CAE and Maedi Visna with negative results. (See Testing Requirement No. 5).
- 9. The following statements are made in regard to scrapie:
 - a) Ovine scrapie is a reportable disease in United States
 - b) The animals are originated from a country that adopts the measures recommended by the OIE Terrestrial Code for the control and eradication of ovine scrapie.
 - c) The animals and their direct ancestry were born and raised in United States or in another country with equal or better health condition with respect to scrapie.
 - d) In accordance with the OIE Terrestrial Code, the animals:
 - i. Have been permanently identified to enable trace back to their establishment of origin.
 - ii. Showed no clinical sign of scrapie at the time of inspection.
- 10. There have been no diagnosed cases of scrapie in the herd of origin during the 5 years prior to exportation. During this time, the herd has not been designated a scrapie infected or source herd and is not currently designated a scrapie exposed herd.
- 11. The animals originated from farms where no cases of contagious agalactia have been reported within 6 months prior to exportation.

Veterinary Health Certificate for Export of Goats from the United States of America to Barbados

Date Of Issue Veterinary Authority UNITED STATES DEPARTMENT OF AGRICULTURE

Certification Statements:

- 12. The animals showed no clinical signs of CAE, Maedi-Visna, scrapie or contagious agalactia on the date of inspection.
- 13. [For animals originating from bluetongue free states or zones (year round)]; The animals originated from herds where there has been no clinical evidence of bluetongue during the last two years (Also See Testing Requirement No. 4.), and either
 - a. did not travel through a bluetongue infected zone during transportation to the place of shipment., or
 - b. were protected from attack from Culicoides likely to be competent BTV vectors at all times when transiting through an infected zone.

Certificate Number

- 14. [For animals originating from bluetongue seasonally free states or zones (from October 15th to March 31st)]: The animals originated from herds where there has been no clinical evidence of bluetongue during the last two years in areas considered seasonally free from bluetongue (Also see Testing Requirement No. 4). The bluetongue-free season has been in effect for at least 60 days immediately prior to shipment and either:
 - a. did not travel through a bluetongue infected zone during transportation to the plane or shipment, or
 - b. were protected from attack from Culicoides likely to be competent BTV vectors at all times when transiting through an infected zone.

dunsting through an infected zone.	
15. The animals were treated with, an approved ectoparasiticide, on which is with seven (7) days prior to export. (The date and product used must be noted on the health certificate.)	hir
16. The animals were treated with, a product approved for internal parasites (including coccident on which is within seven (7) days prior to export. (The date and product used must be noted the health certificate.)	
17. In lieu of testing for leptospirosis, the animals were treated prophylactically with oxytetracycline, on [da which is within one week of embarkation.	ite
18. The animals have been given a complete course of vaccination within 20-60 days prior to export again Blackleg, Malignant Oedema, Enterotoxaemia, Tetanus, and <i>Pasteurella multocida</i> .	ns
 Prior to export, the animals were isolated for 30 days in a facility approved and under the supervision o USDA accredited veterinarian. 	f a

TEST REQUIREMENTS

The animal(s) was (were) tested within 30 days of embarkation to Barbados with negative results for the following diseases (the dates of the tests must be on the certificate):

Tuberculosis: Intradermal tuberculin test.

06192018JH

Veterinary Health Certificate for Export of Goats from the United States of America to Barbados

Certification Statements:

- Brucellosis (B. mellitensis): Standard plate test at 1:50 dilution or other approved serological test.
- Leptospirosis: Microtiter agglutination test at 1:400 dilution for Leptospira pomona, L. icterohaemorrhagiae, L. grippotyphosa, L. hardjo, and L. canicola. [OR provide Certification Statement No. 17 with regard to prophylactic treatment.]
- 4. Bluetongue: Agar gel immunodiffusion (AGID) test or ELISA or PCR.
- 5. CAE /Maedi-Visna: AGID test OR ELISA (as per certification statement No.8)

EMBARKATION STATEMENT

At the port of embarkation, a VS port veterinarian must attach to the U.S. Origin Health Certificate, the Certificate of Inspection of Export Animals (VS Form 17-37) showing:

- The name and address of the consignor.
- The name and address of the consignee.
- 3. The number, species, and identification of the animals to be shipped.
- 4. A statement that the animals have been given a careful veterinary inspection at the port of embarkation and found free from evidence of communicable disease and exposure thereto within 24 hours of exportation.

OTHER INFORMATION

- The animals must be accompanied by an import permit issued by the Senior Veterinary Officer, Veterinary Services, Ministry of Agriculture, Barbados.
- 2. The U.S. Origin Health Certificate is valid for 30 days from the date of issuance although this can be extended to 45 days if the animals have remained healthy and in isolation from other animals and the accredited veterinarian so certifies.
- The animals must be shipped in new clean containers and have no direct or indirect contact with other livestock during transportation to Barbados.
- Upon entry into Barbados all animals must be quarantined on premises previously approved by the Senior Veterinary Officer for a minimum period of thirty days.
- 5. Areas of the United States considered low risk for bluetongue include the following States: (Year round) Alaska, Connecticut, Delaware, Hawaii, Indiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Montana, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, Vermont, Wisconsin, and West Virginia. (October 15 to March 31) Colorado, Idaho, Illinois, Iowa, Kansas, Kentucky, Missouri, Nebraska, New Mexico, North Carolina, Oklahoma, Oregon, South Dakota, Tennessee, Utah, Virginia, Washington, and Wyoming.

CERTIFICATION STATEMENTS

The undersigned official veterinarian, authorized thereto by Veterinary Services, Animal and Plant Health Inspection Service, of the United States of America, certifies the following with regard to the hatching poultry eggs to be exported to Barbados:

- 1. The flocks and the hatcheries from where the shipment described originated, were inspected within the past thirty (30) days and, as a result of careful physical examination, were found free from evidence of infectious and contagious diseases and, in so far as could be determined, have not been exposed to infectious coryza, acute fowl cholera, fowl plague (highly pathogenic avian influenza), fowl pox, fowl typhoid (*S. gallinarum*), infectious laryngotracheitis, infectious synovitis (*Mycoplasma synoviae*), Newcastle disease (avian pneumoencephalitis), ornithosis (psittacosis), pullorum disease, tuberculosis, egg drop syndrome virus, Arizona disease, avian encephalomyelitis, chronic respiratory disease (*Mycoplasma gallisepticum*), infectious bronchitis, avian leukosis (including Marek's disease), big liver spleen disease, vibrionic hepatitis, or infectious bursal disease; and none of these diseases have been diagnosed by serological testing or other method within the flock(s) of origin during the last six months.
- 2. Hatching eggs are from flocks participating in the National Poultry Improvement Plan and the flocks certified as free from: *Salmonella pullorum*, *S. gallinarum*, *Mycoplasma synoviae*, *M. gallisepticum* and *Salmonella enteritidis*.
- 3. There has been no direct and/or indirect contact between the birds in the flock of origin and any other birds including feral and migratory birds.
- 4. No live vaccine for Newcastle Disease or any other live vaccines have been used on the supply flock(s) at any time during the three months before collection of the eggs.
- 5. During the usual routine inspection of the flock(s) of origin there was no visible evidence of communicable diseases.
- 6. There has been no outbreak of Newcastle disease or fowl plague (avian influenza) within a radius of thirty (30) kilometers of the flock(s) of origin in the past six (6) months.
- 7. The eggs were disinfected and packed in new, clean containers with an official USDA seal.

HEALTH CERTIFICATE TO EXPORT HONEYBEE QUEENS Apis Mellifera FROM THE UNITED STATES TO BARBADOS

I. Origin

a. Country of origin and competent authority:	
b. Name and address of exporter:	
c. Name and address of producing beekeeper:	
d. Place of origin of the honeybee queens:	
e. Port of departure:	
II. Destination	
Name and address of consignee:	
III. Description:	
Number of queens shipped (total)	
Number of queen cages/box	
Number of attendants/queen	
Type of feed provided (if any)shipment)	(if honey, irradiation certificate must accompan

III. CERTIFICATION STATEMENTS

- 1. The United States of America or the state of origin is free from reports or the Asian honey bee (*Apis cerana*) or Asian honey bee hybrids and free from reports of the African honey (*Apis mellifera scutellata*) and Africanized honey bees hybrids including European honey bee hybrids with Africanized bees.
- 2. The parasitic mites Varroa jacobsoni, Acarapis woodi and Tropilaelaps clareae and apmyiasis are not known to occur in the country or state of origin.
- 3. All queens originate from colonies were inspected within 90 days of export by a qualified Official Inspector and found to be free from clinical evidence of American foulbrood (AFB), European foulbrood (EFB), Nosemosis, Sacbrood disease, chalkbrood disease and all other regulated infectious or contagious diseases.
- 4. Colonies were assessed for Varroa mites (Varroa destructor) by alcohol washing of bee samples (minimum 5% colonies or 200-300 bees/colony) and either (specify)

Health Certificate No. _____(Valid Only if the USDA Veterinary Seal Appears Over the Certificate No.)

a) Varroa was not detected, or was	under 1% bees tested, or
b) Varroa was detected in over 1%	bees tested and the bee colonies in the queen rearing apiaries were
treated with	, a product that is registered in the United States. Treated colonies
were retested prior to collecting the	queens and attendants to confirm that the level of Varroa is below 1%

are derived were inspected by an Official Inspector for small hive beetle (Aethina tumida), with negative results.

[All materials for shipping must be prepared and stored in the small hive beetle free inspected location(s) on the apiary premises until use. If any shipping materials (including but not limited to shipping boxes and queen cages) are prepared in advance of the shipment date, they must be stored for a minimum of 72 hours prior to shipment in a freezer at 0F (-18C) located in the inspection location(s)].

5. Within 90 days of export, all packing and shipping location(s) on the apiary premises from which queen bees

- 6. All queens and attendants were caught and placed in new queen cages with ventilation holes no larger than 2mm x 2mm or if longer than 2mm are no wider than 1mm. Worker bee attendants (2-6 attendants per queen) were placed in individual queen cages with the queen and not loose in a battery box. Queen cages filled with queens and attendants were stored in a designated and inspected packing and shipping location(s) until shipping.
- 7. Food supplies to the bees during transit [does not contain honey] or [contains honey which has been irradiated to approved levels]. (Please indicate whichever is appropriate).
