

Required Report: Required - Public Distribution

Date: September 05, 2023

Report Number: RP2023-0051

Report Name: FAIRS Annual Country Report Annual

Country: Philippines

Post: Manila

Report Category: FAIRS Country Report

Prepared By: Pia Ang

Approved By: Mark Hanzel

Report Highlights:

This report outlines Philippine government requirements for the importation of food and agricultural products. The report aims to assist U.S. exporters by providing information on labeling, packaging, permitted ingredients, and other relevant information. It also provides points of contact for key Philippine government authorities, U.S. government agencies, and trade associations. The Sections on labelling, packaging (sustainability measures), other requirements (processed products, plant, animal products, fishery) geographical indications were updated. A new Section X on Trade Facilitation was added.

Table of Contents

Executive Summary:	2
Section I. Food Laws	3
Section II. Labeling Requirements:	6
Section III. Packaging and Container Regulations	8
Section IV. Food Additives Regulations.....	9
Section V. Pesticides and Other Contaminants:.....	10
Section VI. Other Regulations and Requirements	11
Section VII. Other Specific Standards:	20
The list of processed food national standards are as follows:	24
Section VIII. Trademark Laws.....	25
Section IX. Import Procedures.....	27
Section X. Trade Facilitation:	29
Appendix I. Philippine Government Regulatory Agency Contacts	30

Executive Summary:

The main laws governing food safety and international trade are the Food Safety Act of 2013, the Food, Drug and Cosmetics Act, and the Agriculture and Fisheries and Modernization Act. The main Departments tasked with developing and enforcing food safety standards in the Philippines are the Department of Health and the Department of Agriculture. The Center for Food Regulations and Research of the Philippine Food and Drug Administration is responsible for the safety of processed and prepackaged food products while the Department of Agriculture and its various regulatory agencies are accountable for primary agricultural and fisheries products. Philippine food regulations generally follow the recommendations of the international standard-setting bodies and the United States.

Section I. Food Laws:

Under Philippine laws and regulations, it is the responsibility of the importer to ensure any product entering the country's customs territory is in full compliance with Philippine requirements. Philippine food regulations generally follow the recommendations of the three international standard-setting bodies; however, Philippine authorities have increasingly established restrictive conditions with the specific purpose of limiting import volumes of politically sensitive agricultural commodities, including rice, corn and its substitutes, poultry, pork, and fishery products. Enforcing authorities check for compliance by inspecting the goods and relevant documentation and decide whether the goods may enter the Philippines. In cases of non-compliance, the goods may be required to be treated before being released or they may be ordered destroyed / disposed of outside the Philippines. Corruption also remains pervasive in the Philippines, creating an environment of non-transparency and uncertainty for importers of agricultural and food products.

The main laws governing food safety and international trade are as follows:

Food, Drug and Cosmetics Act: In 1963, Republic Act 3720 (RA3720) or the "[Food, Drug and Cosmetics Act](#)" was enacted to ensure the safety and purity of foods, drugs, and cosmetics made available to the public. Under this Act, the Philippine Food and Drug Administration (PFDA) was created under the Department of Health (DOH). PFDA's primary function is to ensure the safety, proper handling, efficacy, purity, and quality of processed foods, drugs, diagnostic reagents, medical devices, cosmetics, and hazardous household substances. PFDA oversees the control of the manufacture and sale of processed foods, where the major concerns are adulteration and mislabeling of food products. It is responsible for the surveillance of imported food products.

Agriculture and Fisheries Modernization Act: The Bureau of Agriculture Fisheries Standards (BAFS) under the DA was first established in 1997 as provided for by Republic Act No. 8435 or the Agriculture and Fisheries Modernization Act ([AFMA](#)). Its major duties include formulating and enforcing standards of quality in the processing, preservation, packaging, labeling, importation, exportation, distribution, and advertising of fresh and primary agricultural and fisheries products. BAFS also provides assistance in establishing the scientific basis for food safety, trade standards, and codes of practice, and harmonizes them with internationally accepted standards and practices. BAFS serves as the National Enquiry Point for Codex Alimentarius. It monitors and disseminates information on international developments in food safety.

Food Safety Act: In August 2013, Republic Act No. 10611 or the "[Food Safety Act of 2013](#)" was signed into law. The Act strengthened the food safety regulatory system in the Philippines and set standards from harvest to manufacturing, processing, handling, packaging, distribution, marketing, food preparation, and up to consumption. Under this law, the Department of Agriculture (DA) is responsible for food safety in the primary production and post-harvest stages of the supply chain. The Department of

Health (DOH) is responsible for the safety of processed and prepackaged foods, and the conduct of epidemiological studies. The Department of the Interior and Local Government (DILG), in collaboration with the DA and DOH will supervise the enforcement of food safety regulations. Local government units (LGUs) monitor compliance with food safety standards of food businesses such as slaughterhouses, dressing plants, wet markets, supermarkets, school canteens, restaurants, and catering establishments, as well as street food sales. A Food Safety Regulation Coordinating Board was created to monitor compliance with the law, coordinate management and planning during food safety emergencies, and establish policies and procedures for coordination among agencies involved in food safety. In February 2015, the Implementing Rules and Regulations of the Food Safety Act were signed by the Secretaries of Health and Agriculture, formally implementing the law. Under the Food Safety Act, regulatory oversight over processed meat products was transferred from the DA National Meat Inspection Service (NMIS) to the Philippine Food and Drug Administration (PFDA) effective July 2016.

While not yet fully in force, pursuant to the [Implementing Rules and Regulations](#) of the Food Safety Act of 2013 or Republic Act 10611, the DOH through the PFDA shall be responsible for the overall regulation of all activities pertaining to processed and prepackaged foods, whereas DA shall be responsible for unprocessed agricultural products. This includes the manufacture, importation, exportation, distribution, sale, and promotion of all processed and prepackaged food products and food supplements/dietary supplements.

Consumer Welfare Act: The Consumer Act of the Philippines ([Republic Act 7394](#)) of 1992 aims to protect the interests of the consumer, promote their general welfare, and establish standards of conduct for business and industry. The provisions of the law shall be enforced by the following implementing agencies: the Department of Health with respect to food, drugs, cosmetics, devices and substances; the Department of Agriculture with respect to products related to agriculture; and the Department of Trade and Industry with respect to other consumer products not specified above. Among all the relevant departments involved in the implementation of RA 7394, the DTI plays the central role.

Regulatory Bodies

The main regulatory bodies monitoring the safety and quality aspects of imported agriculture and food products are the Department of Health's Food and Drug Administration (PFDA) and the Department of Agriculture's Bureau of Animal Industry (BAI), the Bureau of Fisheries and Aquatic Resources (BFAR), and the Bureau of Plant Industry (BPI). These entities issue a number of Administrative Orders and Memorandum Orders that provide the administrative details to these food laws.

Bureau of Animal Industry: [Republic Act No. 3639](#) established BAI and empowered it to prescribe standards for quality in the manufacture, importation, labeling, advertising, distribution, and sale of livestock, poultry products, meat products, dairy products, certain animal feed premixes, and veterinary supplies in the country. BAI is also charged with preventing, controlling, containing, and eradicating communicable animal diseases by regulating the flow of animals and animal products into the country.

National Meat Inspection Service: [Presidential Decree 7](#) authorized the National Meat Inspection Commission (NMIC) to implement policies and procedures governing post-production flow of livestock, meat, and meat products through the various stages of marketing. The NMIC supervises the operations of abattoirs and meat establishments and conducts ante- and post-mortem inspections of meat. The Meat Import/Export Service of the NMIC ensures that imported or exportable meat and meat products are produced under acceptable conditions and systems.

In June 2004, Republic Act 9296 otherwise known as the "[National Meat Inspection Code](#)" was signed into law and its Implementing Rules and Regulations ([IRR](#)) were issued in October 2005. The NMIC was officially renamed the National Meat Inspection Service (NMIS). The law, which transfers certain NMIC functions to the Local Government Units, was crafted to harmonize Philippine meat inspection laws with international standards. While BAI has jurisdiction over the import of both live animals and meat from an animal health perspective, NMIS enforces the food safety and quality regulations over fresh, chilled, and frozen meat and poultry imports into the Philippines.

Bureau of Plant Industry: Presidential Decree 1433 or the [Plant Quarantine Law](#) authorizes the DA through BPI to exercise inspection and certification and/or treatment activities on imported and exportable plant products such as fruits and vegetables. It also mandates BPI to prevent the introduction of exotic pests into the country, to prevent further spread of existing plant pests, and to enforce phytosanitary measures for the export of plants, plant products, and regulated articles.

Bureau of Fisheries and Aquatic Resources: BFAR is the government agency responsible for the development, improvement, management, and conservation of the country's fisheries and aquatic resources. It was reconstituted as a line bureau under the DA by virtue of Republic Act No. 8550 of the "Philippine Fisheries Code of 1998". The Fisheries Regulatory and Quarantine Division, Foreign Trade Section issues commodity clearances (i.e., import permits) and other requirements for the import of fish and fishery products.

Local Government Units: Republic Act 7160, also known as the "[Local Government Code of 1991](#)" mandated the devolution of power, authority, resources, responsibilities, and accountabilities from the national government to the provincial, city, and municipal governments. Under the Food Safety Act, the DILG in coordination with DA and DOH shall supervise the enforcement of food safety and sanitary rules and regulations as well as the inspection and compliance of business establishments. LGUs may use the Local Government Code to put in place trade measures over and above the national SPS regulations.

Section II. Labeling Requirements:

Department of Health [Administrative Order 30 \(2014\)](#) “Labelling of Prepackaged Food Products” sets forth the said requirements and requires the following to be included on labels:

1. Product name/name of the food;
2. Use of brand name and/or trademark;
3. Complete list of ingredients used in the product (in decreasing order of proportion), including additives, flavorings, and preservatives used;
4. Net contents and drained weight;
5. Name and address of manufacturer, packer, or distributor, including country of origin for imported products and name and the address of Philippine importer or distributor;
6. Lot identification;
7. Storage condition;
8. Expiry or expiration date/use-by-date/consume before date;
9. Food allergen information;
10. Direction/instruction(s) for use;
11. Nutrition facts/nutrition information/nutritive value

Special labeling content is required for a small number of products, e.g., bottled water and pre-packaged processed meats. No special requirements exist for biotechnology or organic labels.

Pre-Approval: PFDA requires importers to provide advance copies of the labels of the products they intend to import. This information is required for the registration of imported food and drink products (see Section VI). The content of such labels is scrutinized to establish whether it is acceptable under Codex and PFDA requirements. Nutritional and medical claims made on such labels are one of the factors considered by PFDA when evaluating applications to register foreign products for import into the Philippines, especially Category II (medium and high risk) products such as food supplements, infant foods, and special dietary foods. Products that have labels that make claims that cannot be easily substantiated may be banned from entry into the country.

PFDA allows the use of a sticker to correct minor labelling infractions (i.e., expiry date formats, importer/distributor information, nutritional facts, importer/distributor information, nutritional facts format) so long as it is truthful, not confusing to the consumer, and consistent with [Food Safety Act of 2013](#), specifically:

“Rule 14b.2 Food not fully or adequately in compliance with food safety regulations but which can be brought into compliance through simple methods such as re-labelling, re-packaging, sorting and/or cooking, may be recommended to be brought into compliance by the FBO if the method of treatment proposed is acceptable to the DA and/or the DOH. The resulting product shall be compliant with all regulatory requirements upon determination of the DA and/or the DOH.”

Nutritional and Health Claims and Advertising: Food labels that indicate special dietary uses (e.g., diabetic foods) must include information concerning its vitamin, mineral, and other dietary properties as required by PFDA, and in a manner that fully informs purchasers of the product's intrinsic value in terms of its special use. PFDA is also responsible for monitoring and ascertaining the veracity of nutritional and medicinal claims in food advertisements in the various media. PFDA may call upon any manufacturer, distributor, or advertiser to desist from inaccurate or misleading nutritional or medicinal claims in their advertisements. Should any food manufacturer, distributor, or advertiser refuse or fail to obey the PFDA order to desist from using false claims, it can be assessed penalties under the law and regulations.

Section III. Packaging and Container Regulations:

Packaging: Codex Alimentarius and U.S. Food and Drug Administration regulations serve as PFDA's main reference guidelines for policy pertaining to good manufacturing practices and suitability of packaging materials for food use. The Food Safety Act of 2013 specifies that PFDA is responsible for ensuring the safety of all food processing and product packaging activities. General safety requirements for food packaging materials are contained in [Administrative Order 153](#) (2004) or the Revised Guidelines on Current Good Manufacturing Practice in Manufacturing, Packing, Repacking, or Holding Food. PFDA also established PNS 1104:1992 on Plastic Materials for Food Contact Use - Colorants – Specification.

Importers, however, need to register packaged products with PFDA before they are sold at retail outlets (see Section VI).

In January 2023, the Department of Environment and Natural Resources (DENR) issued the implementing rules and regulations (IRR) of [Republic Act 11898](#), also known as the Extended Producer Responsibility (EPR) Act of 2022. The said law requires large-scale companies to establish a mechanism for the recovery of their plastic packaging.

Wood Packing Materials Requirements: The Philippines adopted ISPM 15 for wood packaging material (WPM) in June 2005. See [Philippines WPM Requirements](#).

Section IV. Food Additives Regulations:

Food additives must comply with the Philippine Food Act and the regulations that have been established by PFDA for such products, including Bureau Circular 16 (2006), which establishes the current list of permissible food additives. Additives are broadly defined by PFDA as any substance that becomes a component part or otherwise affects the characteristics of the food or beverage product. As such, they include any substance that has a direct or indirect impact on the food as a result of its use in producing, manufacturing, processing and preparing the product, and in packing, treating, packaging, transporting, and/or holding the product.

Lake Colors: In 2018, PFDA halted new registrations and discontinued renewal of pre-existing registrations of food products containing lake colors due to food safety concerns. Lake colors are typically used to make confectionaries such as chewing gum, hard candies, snack foods, cake and dough mixes, and ice cream. A [draft regulation](#) on the use of lake colors remains under review.

Section V. Pesticides and Other Contaminants:

If the imported product contains pesticide or veterinary drug residues or other contaminants above the maximum limit set by Philippine, ASEAN, or Codex standards, the commodity shall be refused entry and/or seized.

Pesticides: The Fertilizer and Pesticide Authority (FPA) was created in 1977 by [Presidential Decree 1144](#). The FPA is the designated national authority for registration matters. FPA licenses pesticide distributors and dealers and issues import certificates. Registration may be suspended or cancelled when there is imminent danger of misuse of the products or violations of regulations by handlers. Registration of new and toxic pesticides requires evaluation by the FPA for risk and benefits.

BPI is the agency mandated to establish practices on the use of pesticides as well as monitor pesticide residue levels in crops and by products. It also recommends policies for the safety of consumers.

BAFS has established MRLs adopted from Codex Alimentarius, ASEAN, and Japan Agricultural Standards for [selected imported crops](#) like apple, grapes, oranges, pears,

Veterinary Drugs: Veterinary drugs must be included in PFDA's [registry](#) prior to commercial use or sale. See also BAI's information on veterinary product registration. [Administrative Order 14 \(2003\)](#) bans the use of beta-agonists if also used as bronchodilators and tocolytic agents in humans.

The National Veterinary Drug Residue Monitoring Program was created by virtue of [DA Administrative Order No. 14 s. 2006](#) and includes sampling of feed, eggs, [meat \(and poultry\)](#), fisheries, and milk. [Philippine National Standard 48:2016](#), issued by BAFS, sets maximum residue limits of veterinary drugs in food as well as is intended to be an endorsement and identical adoption of the Codex Alimentarius Commission (CAC) MRL 2-2015.

Contaminants: The Philippine National Standards for Contaminants and Toxins in Food and Feed ([PNS/BAFS 194:2022](#)) replaces PNS/BAFS 194:2017, was established pursuant to the Food Safety Act. It applies only to primary and postharvest products and not to processed products. The standard is a modified adoption of the CODEX STAN 193-1995 (amended in 2019), in part to meet the particular needs of the Philippine industry. BPI adopted its application via [AC No 1 \(2020\)](#).

Section VI. Other Regulations and Requirements:

The Philippines requires importers of food and agricultural products to be registered with DA and/or FDA, depending on the product.

For plant and plant products, animals, meat and poultry products, and fishery products, DA Administrative Order 9 (2010) requires a Sanitary and Phytosanitary Import Clearance (SPSIC) be issued prior to importation and functions as an import permit. The SPSIC replaced the earlier Veterinary Quarantine Clearance for meat and poultry products, Plant Quarantine Clearance for plant and plant products, and Fishery Quarantine Clearance for seafood and fishery products. An SPSIC is generally valid for 60-90 days from the date of issuance, though the timeframe is shorter for politically sensitive products, while DA regularly suspends issuance of SPSICs during local harvest periods. The exported product may not be loaded at the country of origin until the SPSIC is issued. The SPSIC is non-transferable and is specific to individual shipments. The SPSIC cannot facilitate multiple shipments. For seafood, a Certificate of Necessity to Import (CNI) must first be presented prior to the application for the SPSIC (see Fishery Section below).

[Administrative Circular 6 \(2022\)](#) “Revised Rules and Regulation Governing the Importation of Agricultural and Fish and Fishery/Aquatic Products” reiterates that a licensed importer must apply for a Sanitary and Phytosanitary Import Clearance (SPSIC) from DA prior to importation. The application to import and all the supporting documentary requirements must be filed electronically via the DA Trade System. The SPSIC shall be good for one shipment and is not transferrable. The validity of the SPSIC shall indicate the period within which the product should have left the country of origin.

Plant and Plant Products:

BPI’s [National Plant Quarantine Services Division](#) (NPQSD) was charged with implementing [Department Circular 4 \(2016\)](#) “Guidelines on the Importation of Plants, Planting Materials and Plant Products for Commercial Purposes” and its supplemental [Memorandum Order 28 \(2019\)](#). These implementing documents were issued in an attempt to align Philippine import requirements with the relevant international phytosanitary guidelines promulgated by the International Plant Protection Convention (IPPC). As BPI aligned import requirements with IPPC guidelines, it allowed for continued trade of products that had been historically imported into the Philippines. Note: BPI continues to regulate processed and pre-packaged plant products despite the Food Safety Act of 2013 transferring their oversight to PFDA.

In accordance with IPPC guidelines, BPI now categorizes imported plants and plant products as follows:

- Category 1: Commodities processed to the point that they are incapable of being infested with quarantine pest should obtain a Plant Quarantine Service Certificate or SPSIC from BPI.
- Category 2: Commodities processed to the point where the commodity remains capable of being infested with some quarantine pests and whose intended use may be for consumption or further

processing require an SPSIC and Phytosanitary Certificate (PC) and may require a Pest Risk Analysis

- Category 3 and 4: Commodities that have not been processed with an intended use of consumption, processing, or planting require an SPSIC, PC, and Pest Risk Analysis.

Since BPI implemented updated requirements to align with IPPC guidelines, a pest risk analysis has been completed for the following U.S. commodities: broccoli, cauliflower, lettuce, carrots, cabbage, celery, potatoes, Christmas trees, and blueberries. Additionally, BPI has initiated a PRA for U.S.-origin pomegranates. For wheat, corn, soybeans, and other plant products that have been historically imported into the Philippines, BPI allows continued trade per [International Standard Phytosanitary Measures](#). The BPI list of allowed fruits and vegetable is available [here](#) and includes the list of U.S. fruits and vegetables allowed for export to the Philippines.

Meanwhile, SPSICs must be secured in accordance with DA Department Circular 4 for the following plants, planting materials and plant products:

- 1) Living plants
- 2) Nursery stocks including vegetative parts thereof used as propagating materials
- 3) Nuts and unprocessed seeds either for planting or consumption
- 4) Fresh fruits, vegetables, and other plant products such as fresh onion, garlic, ginger, etc. which have been declared as prohibited/restricted import under special quarantine orders because of being known host of dangerous plant pest or originating from restricted areas.
- 5) Pure culture of fungi, bacteria, virus, nematodes and other phytopathogenic materials
- 6) Mushroom cultures including spawn
- 7) Soil and plant materials for isolation of organism
- 8) Algae cultures, rhizobial cultures as legume inoculants
- 9) Other plant cultures
- 10) Genetically modified plants, planting materials and plant products
- 11) Wood packaging materials and other packing materials capable of harboring plant pests
- 12) Frozen/chilled fruits and vegetables including diced vegetables and processed fruits
- 13) Milled rice, corn and other grains and cereals
- 14) Grasses for animals and aqua feed
- 15) Other plants, planting materials, and plant products under Category 2, 3 and 4.

NPQSD accredits Philippine importers on a commodity-by-commodity basis. Licenses must be renewed every three years. Active registries are available as follows:

- Certificate of Registration [registry](#)
- Plant Quarantine Service Certificate [registry](#)

For more information: <https://npqsd.bpi-npqsd.com.ph/import/>

- **Licensed importer** – Prior to application of SPSIC for importation of plants, planting materials, and plant products for commercial purposes, the applicant needs to be registered first as an importer. If the importer will import a particular product more than once, it will be required to register as an importer of said products and will be given access to the online application of Sanitary and Phytosanitary Import Clearance (SPSIC) known as Inter-Commerce. Requirements and procedures are in the attached BPI website. The term “registered importer” was the previous term used for accredited importers; currently, the term “licensed importer” is used. The list of [licensed importers](#) is available at the BPI website.
- **One-time importer** – An importer who intends to import only once can usually file an application manually at BPI PQS Central office in Manila. They will be issued a Plant Quarantine Clearance (PQC) equivalent to import permit, because they have no access to the Inter-Commerce application for SPSIC. Alternatively, an applicant can register through the online process as noted [here](#).

Difference between a Plant Quarantine Clearance (PQC) and Sanitary and Phytosanitary Import Clearance (SPSIC):

Both are issued for Category II, III, and IV commodities. However, PQCs are only issued for importation of commodities for personal consumption, while SPSICs are generally for commercial purposes.

Corn and Feed Wheat:

[Memorandum Circular 39 \(2020\)](#) requires commodity descriptions to distinguish between feed and food use. The importer will need to attach an affidavit declaring the intended use of the imported product, to accompany the proforma invoice and GMO/non-GMO declaration. Additionally, importers are required to provide BPI and BAI with corn and wheat supply and utilization reports every three months. The must-ship out date is now 20 days from approval of the SPSIC, while products must arrive within 35 days of approval if from ASEAN and within 65 days if from Myanmar or any other countries outside ASEAN. U.S. shipments thus need to be shipped out within 20 days and arrive within 65 days upon issuance of the SPSIC. Importers must apply for an e-RFI (request for inspection) 24 hours before arrival.

Rice: [Memorandum Order 38 \(2020\)](#) supplements [Memorandum Circular 28 \(2019\)](#) to include the same must-ship and must-arrive-by language as MC39 for corn and feed wheat.

[Memorandum Circular 43 \(2020\)](#) issued in December extends the SPSIC validity dates for corn and rice. It states that shipments from ASEAN countries, except Burma, should arrive in the country within 60 days of the SPSIC issuance. Shipments coming from Myanmar and other non-ASEAN countries including the United States, on the other hand, should be here within 90 days of the SPSIC issuance.

[Republic Act No. 11203](#) (2019) or the “Rice Tariffication Law” (RTL) with replace rice import quantitative restrictions with tariffs. Joint Memorandum Circular No. 01-2019 or the [Implementing Rules and Regulations](#) (IRRs) of the RTL allows for automatic approval of SPSICs, consistent with the [Ease of Doing Business Act](#).

Sec. 5. Issuance of Sanitary and Phytosanitary Import Clearance for Rice for the Sole Purpose of Ensuring Food Safety. - All importers of rice are required to secure a Sanitary and Phytosanitary Import Clearance (SPSIC) from the Bureau of Plant Industry (BPI) prior to importation in accordance with existing laws, rules and regulations: Provided, that the clearance shall not provide for import volume and timing restrictions: Provided, further, that failure on the part of the BPI to release the SPSIC without informing the rice importer of any error, deficiency, omission, or additional documentary requirement shall mean automatic approval of the SPSIC applied for within seven (7) days after submission of the complete requirements.

Additional import requirements for rice are available in the GAIN [FAIRS Subject Report on Rice](#).

Animals, Animal Products, and Animal Feeds:

Philippine importers must register and become accredited with the Bureau of Animal Industry’s National Veterinary Quarantine Services Division, which accredits importers of animals and animal products/by-products, and issues Veterinary Quarantine Clearance (VQC) and other permits related to international trade of animals and animal products/by-products.

- Online [Local Shipping Permit](#)
- Online [SPS Import Clearance](#)
- BAI [Importer Accreditation Entry Form](#) (Except Pets)

For more information: <https://www.bai.gov.ph/e-services>

Processed Products of Animal Origin:

In May 2017, the Philippine Department of Agriculture Bureau of Animal Industry (BAI) issued [Memorandum Circular 4](#), announcing it would no longer issue SPSICs for processed food products of animal origin intended for human consumption. This includes but is not limited to the following: milk and milk by-products (ice creams, chocolates, chocolate drinks, pasteurized milk, marshmallows, cheese, cheddars, butter, cereals, cakes, tarts, pastries, candies, sauce with milk, soya milk, cocoa spread, coffee with milk, mayonnaise, whipping creams, and processed eggs. These products are under the supervision of PFDA.

Animal Feed:

On February 28, 2021, regulatory oversight on veterinary drugs and feed ingredients transferred from DA to PFDA with the expiration of Joint Administrative Order 26 (2013). However, Philippine importers must continue to work with both DA Bureau of Animal Industry and PFDA Center for Food Regulations and Research. [Memorandum Circular 1](#) (2021) states that Regulation of Feed Pre-Mixes and

Water-Soluble Supplements will remain under the jurisdiction of the BAI Animal Feeds, Veterinary Drugs and Biologics Control Division

On June 25, 2022, BAI started enforcing BAI [Memorandum Circular 26](#) (MC26) issued in 2021. MC26 requests importers to submit a utilization report of their previous importation of feed ingredients and other ingredient used in the manufacturer of animal feeds such as: corn, sorghum, wheat, soya beans, palm olein products, whey powder, skimmed milk powder, lactose, buttermilk powder, whole milk powder.

Tallow:

[Memorandum Order 20 \(2004\)](#) allows the importation of protein-free tallow.

Meat and Bone Meal: [Memorandum Order 26 \(2009\)](#) lifted the ban on meat-and-bone meal and other animal protein products.

Meat and Poultry Products:

DA [Administrative Order 26 \(2005\)](#) “Revised Rules, Regulations and Standards Governing the Importation of Meat and Meat Products into the Philippines” regulates meat and poultry imports.

[Administrative Order 24 \(2010\)](#) “General Guidelines on Labelling of Meat and Poultry” requires the following information on carton labels:

- 1) Registered trade name of the exporter or brand name of the product;
- 2) Business name and address of the exporter;
- 3) Country of origin;
- 4) Lot identification;
- 5) Product description and list of ingredients;
- 6) Net quantity of contents, in terms of weight, measure, or numerical count rounded to the nearest tenths (expressed in METRIC SYSTEM);
- 7) Date of manufacture and packaging
- 8) Date of minimum durability (“best before”) or expiration date; and
- 9) Handling and storage instructions

Notes: Philippine officials have inconsistently enforced an unofficial one-year expiration date for imported frozen beef, pork, and poultry. Also, the Philippines does not allow meat and poultry products packed in cartons with labels indicating shipment to another country. More recently, some importers report that the Philippines sometimes requires that imported meat arrive in the country not later than six months from the production date on the label (a requirement for other exporting countries but not the United States).

On November 4, 2021, the Philippine DA issued Joint BAI-NMIS Memorandum Circular 3 (JMC 3) and NMIS MC 11-2021-039 (see [GAIN Report](#)) indefinitely extending a moratorium on overly restrictive labeling requirements for imported meat and poultry until existing guidelines and regulations are properly reviewed and amended. JMC No. 3 reiterates that all meat and poultry imports are to be guided by NMIS Memorandum Circular 8-2021-24, which allows importers to rectify labels upon arrival, also allowed under Section XI.B of AO 26.

Fishery Products:

BFAR [Fisheries Administrative Order 195 \(1999\)](#) "Rules and Regulations Governing Importation of Fishery Products" only allows the importation of fish and aquatic products for retail when certified as necessary by the Secretary of Agriculture in order to achieve food security, taking into consideration public welfare and safety. A Certificate of Necessity to Import (CNI) is issued by the Secretary upon the recommendation by the Bureau of Fisheries and Aquatic Resources (BFAR), in coordination with the Philippine Fisheries Development Authority (PFDA), and in consultation with the National Fisheries and Aquatic Resources Management Council (NFARMC), and fishing industry stakeholders.

Under [Fisheries AO 259 \(2018\)](#), the Secretary of Agriculture determines monthly importable volume for the duration of the closed and off-fishing fishing seasons or during occurrences of calamities taking into considerations the historical volume of production for the last five years, level of demand and projected consumption, and existing trends of market prices. Imported fishery products are no longer allowed for sale in wet markets, which have been redefined by BFAR to include modern supermarkets and e-commerce. Imported fishery products may now only be imported by institutional buyers, including food processors and hotel/restaurant chains.

[Administrative Order 22 \(2021\)](#) "Guidelines in the Implementation of FAO 259" outlines the procedure for importation under the CNI. The Secretary of Agriculture first determines the total volume (including the species allowed) to be imported by the country and issues a CNI, this volume is then auctioned off to qualified importers, then a SPSIC is issued to these importers by the BFAR.

The must-ship-out-by date is 30 days for live, fresh and chilled fish and 45 days for other frozen fish and other fishery/aquatic products.

See [GAIN FAIRS Subject Report on Fishery Products](#) for additional information on import regulations and labelling requirements:

Processed Products:

Philippine importers must secure a License to Operate (LTO) from PFDA prior to the importation of foods offered for retail sale. The initial License to Operate is valid for two years while renewals are valid for five years. Prior to importation and retail sale, an importer-distributor also needs to obtain a Certificate of Product Registration (CPR) using the [E-Registration System](#). A processing time of 20

working days is mandated by the Anti-Red Tape Authority, from the start of complete application for CPRs. Initial CPRs are valid for three years with renewals valid for five years. Below is a checklist of the requirements based on Administrative Order No. 2014-0029:

- Accomplished integrated application form as prescribed by current PFDA regulations;
- Proof of payment of fees as prescribed by current PFDA regulations;
- Actual labels for all packaging sizes
- Pictures of the product from all angles and in different packaging sizes, and from at least two different perspectives allowing visual recognition of the product as the same with the one being registered, as applicable;
- As applicable, documents to substantiate claims such as technical, nutritional, or health studies or reports, market-research studies, Certificate of Analysis, quantitative analysis and computations, scientific report or studies published in peer reviewed scientific journals, etc.

Based on PFDA Circular 2016-007, an importer needs to obtain one of the following documents from each supplier: Foreign Agency Agreement/Certificate of Distributorship/Appointment Letter; or Proforma Invoice; or Memorandum Agreement from the supplier or manufacturer.

One of the following additional documents is also required:

- Manufacturer's Certificate of Registration with Good Manufacturing Practices compliance or its equivalent.
- ISO 22000 Certification or HACCP Certificate
- Phytosanitary Certificate/Health Certificate/Certificate of Free Sale issued by the government regulatory agency or health authority of the country of origin stating that the product applied for registration is freely sold in the country of origin and/or fit for human consumption.

The time it takes for PFDA to issue a CPR has considerably improved as PFDA seeks compliance with the [Ease of Doing Business Act \(2018\)](#) or "Republic Act 11032" however, further improvement is needed to meet the 20 business day maximum for highly technical transactions.

Product Samples:

Samples for research/plant trial/production trial are allowed without a CPR, provided a clearance is secured from the PFDA. The following requirements must be submitted to PFDA:

1. Application Letter (No specific format, just state that the purpose of importation)
2. Letter/Affidavit of Undertaking (No specific format, Submit original notarized copy)
3. Certificate of Analysis OR Certificate of Free Sale
4. Proforma Invoice
5. Packing List, if available
6. Bill of Lading, if available
7. Payment (Php 510/invoice)
8. Valid LTO

Fortification Requirements:

Republic Act 8976 or the [Philippine Food Fortification Law \(2000\)](#) requires staple foods, including imports, be fortified based on standards set by the DOH, including rice with iron; wheat flour with vitamins A and iron; refined sugar with vitamin A; cooking oil with vitamin A; and other staple foods with nutrients as may later be required by the National Nutrition Council. Mandatory fortification is only for the staple food itself, not for imported processed food containing one of the staple foods as an ingredient. Other processed food may also be fortified on a voluntary basis, following the Guidelines on Micronutrient Fortification for Processed Foods of [DOH AO 82 \(2003\)](#).

Plant-based Meat and Other Products:

There are no additional requirements for plant-based meat and other plant-based products. These products follow the same certification and labeling requirements as prescribed by FDA Administrative Order 29 (2014) above.

Genetically Engineered (GE) Foods:

The Joint Department Circular No. 1 entitled *Rules and Regulations for the Research and Development, Handling and Use, Transboundary Movement, Release into the Environment, and Management of Genetically-Modified Plant and Plant Products Derived from the Use of Modern Biotechnology* was signed into law in March 2016. The Philippines streamlined its biotechnology regulatory framework by revising the JDC-1, which was approved on February 15, 2022. See [here](#) for more information.

All GE plant varieties (i.e., regulated articles) must be evaluated for food, feed, and environmental safety prior to entering the Philippines. Any food or feed containing an unapproved variety regardless of country of origin is prohibited from entering the Philippines. For more information, see [Philippines Agricultural Biotechnology Annual Report](#).

The Bureau of Plant Industry has updated its documentary requirements for obtaining an SPSIC, namely the "Declaration of GMO Content." The BPI Memorandum and list of commodities can be found [here](#). Previously required for only bulk commodities and not regularly enforced, BPI has expanded the list to 35 commodities. SPSIC applications may be rejected without the declaration. BPI has confirmed that the importer can sign the declaration. The declaration can include GM events/traits that may be included in the shipment. For more information and a sample declaration form, please see the [2022 Agricultural Biotechnology Annual Report](#) (pages 7).

Canabidiol (CBD): Pursuant to R.A. 9165, otherwise known as the Comprehensive Dangerous Drugs Act (2002), the importation, sale, trading, administration, dispensations, delivery, distribution, and transportation, regardless of the quantity and purity involved, are prohibited, including any and all species of prohibited drugs including marijuana. Cannabis is still illegal but medicines with CBD of 0.2% Tetrahydrocannabinol (THC) are allowed by the FDA. Only medicines with the previously mentioned CBD content were deregulated.

Trans Fats: On June 18, 2021, the Department of Health issued [Administrative Order 2021-0039](#) (AO 2021-0039) “National Policy on the Elimination of Industrially Produced Trans-Fatty Acids for the Prevention and Control of Non-Communicable Diseases.” The Order took effect on July 6, 2021, 15 days following publication.

AO 2020-0039 aims to provide a policy framework to eliminate industrially produced TFAs in the Philippine Food Supply by 2023, providing a transitory period not to exceed two years. Specifically, the AO aims to reduce TFA intake among Filipinos to less than 1 percent of the recommended total energy intake through the following strategies:

1. Regulating pre-packaged food products containing TFA
2. Enabling the replacement of TFA with alternative oils, fats, and oilseeds
3. Increasing awareness of the negative impacts of TFA to the public.

Under the AO, industrially-produced TFA and processed food products containing TFAs shall be prohibited from being produced, imported, and distributed for commercial sale. Specifically, the manufacture, importation, distribution, and sale of the following shall be prohibited:

1. Partially-Hydrogenated Oils (PHO) to be consumed alone or used in preparation of processed food products;
2. Oils and fats made blended with PHO;
3. Oils and fats with TFA content more than 2g per 100g; and
4. Processed and prepackaged food with PHOs and high TFA content

Section VII. Other Specific Standards:

A list of approved Philippine National Standards follows. See the BAFS [website](#) for details.

Section VIII. Trademark Laws:

All copyright and trademark regulations are contained in the [Intellectual Property Code of the Philippines](#) (Republic Act No. 8293). The Intellectual Property Office of the Philippines (IPOPHL) under the Department of Trade and Industry is in charge of enforcing these regulations and ensuring that intellectual property rights are enforced.

The application for registration of a trademark shall be in Filipino or in English and shall contain the following: a request for registration; name and address of applicant; state of which the applicant is a national or where domiciled; the law under which it is organized when the applicant is a juridical entity; appointment of an agent or representative or an indication of claims on priority of an earlier application (if applicable). A reproduction of the mark must also be submitted along with the list of goods and services for which the registration is sought.

A trademark may not be registered if it is immoral, deceptive, or of a scandalous matter; if it is the flag, coat of arm, or insignia of the Philippines or any of its political symbols; a name, portrait, or signature identifying a particular living individual without that person's written consent; identical with a registered mark whether or not registered in the Philippines but well known internationally; if it misleads the public; signs that are generic for goods or services; shapes that may be necessitated by technical factors; color alone, unless defined by a given form; or anything contrary to public order or morality.

A certificate of registration is valid for 10 years, provided an applicant files a declaration of actual use and evidence to that effect within one year from the fifth anniversary of the date of registration of the mark. The registration may also be renewed for another 10 years and there is no limit as to the number of times the registrant may request a renewal of registration, provided the prescribed fees are paid.

More information on registration of trademarks may be found here:

<https://www.ipophil.gov.ph/services/trademark/>.

Geographical Indications:

Geographical Indications (GI) are protected through the trademarks and consumer protection provisions of the Intellectual Property (IP) Code. IPOPHL will only register collective marks to duly accredited cooperative organizations having a collective community right in the place of origin. The agency has increased efforts to promote GI registration as a means to protect locally produced products. IPOPHIL Memorandum Circular 2022-022 or the [Rules and Regulations on Geographical Indications](#) took effect in November 2022.

Plant Variety Protection:

[Republic Act 9168](#), otherwise known as the Plant Variety Protection Act of 2002 (PVPA) allows plant breeders to obtain intellectual property protection for new plant varieties solely through a certificate of Plant Variety Protection. Under the PVPA, holders of Plant Variety Protection certificates have the right to authorize the production, reproduction, export, and import of the varieties that they have developed. The PVPA Act is the legal basis of a sui generis system of intellectual property rights. The Act provides rights to plant breeders over the propagating material of their protected variety.

For more information, visit the BPI's Plant Variety Protection Office website.

Section IX. Import Procedures:

The basic procedures that apply to the import of food and agricultural products are as follows:

STEP 1: Only accredited and registered individuals or businesses may import food products into the Philippines. Importers must obtain accreditation from relevant Philippine regulatory bodies (e.g., LTO from PFDA for processed foods, Certificate of Accreditation from BAI/NMIS for animal, animal products and animal feeds; BFAR for seafood and fisheries; and BPI for plant and plant products).

STEP 2: Regulatory authority determines whether food or agriculture products can enter the Philippines. Only acceptable countries as determined by the relevant regulatory body may export food and agriculture products to the Philippines.

STEP 3: Import licenses and permits must be obtained from the relevant regulatory body for the goods to be imported to the Philippines before the products are shipped from the exporting countries. An SPSIC must be obtained from BAI, BPI, or BFAR (as applicable) prior to each importation of plant, animal, and fishery products. A CPR must be secured from PFDA prior to initial importation of a particular food or beverage.

Note: Republic Act 11032 or the Ease of Doing Business and Efficient Government Service Delivery Act of 2018 aims to streamline the current systems and procedures of government services, while enforcing all government agencies to comply with prescribed processing time as follows: 3 working days for simple transactions, 7 working days for complex transactions, and 20 working days for highly technical applications. If agencies fail to approve or disapprove an original application within the prescribed processing time, the said application shall be deemed approved. ARTA is also charged with reviewing proposed major regulations of government agencies, using submitted regulatory impact assessments. Complaints may be filed at <http://arta.gov.ph/complaint-form/>.

STEP 4: All unprocessed agricultural products entering the Philippines must be accompanied by a sanitary or phytosanitary certificate issued by the U.S. competent authority. They can also be required for processed agricultural products depending on the Philippine Department of Agriculture's desire to regulate the product. The Philippines' Food and Drug Administration does not require any such export certificate for processed and prepackaged agricultural and food products, but does require all processed and prepackaged products to be first registered (See Section V). Additional required documents to facilitate importation include:

- Commercial invoice/pro-forma invoice;
- Bill of lading (for sea freight) or air waybill (for air freight);
- Certificate of origin (if requested);
- Packing list;

- Applicable special certificates/import clearance/permit depending on the nature of goods being shipped and/or requested by the importer/bank/letter of credit clause, e.g. Food and Drug Administration (FDA) license; and
- Commercial invoice of returned Philippine goods and/or supplemental declaration on valuation.

Detailed information on custom clearance procedures may be obtained from:

<https://www.dti.gov.ph/negosyo/imports/import-facilitation/import-clearance-overview/>

STEP 5: Following customs clearance, the BOC uses a web-based Electronic Tracking of Containerized Cargo (ETRACC) System that allows BOC to track, monitor, and audit the location and condition of reefers, as well as obtain real-time alarms on, among others, diversion and tampering of containers destined for export, export processing or special economic zones, customs bonded warehouses and refrigerated containers subject to a secondary inspection. CMO 04-2020 implements Customs Administrative Order (CAO) No. 15-2019, which covers the movement within customs territory of foreign goods for outright exportation, warehousing, and those admitted to Free Zones, as well as the transfer of goods from customs facilities and warehouses (CFW). This includes containers subject to further verification and/or monitoring such as frozen agricultural products (i.e., meat, poultry and fisheries) that have already paid duties and taxes subject to a secondary inspection at the cold storage warehouse.

Section X. Trade Facilitation:

The Formal Entry Process refers to the cargo clearance process for imported shipments considered to be of commercial nature. Customs Administrative Order (CAO) 09-2020 applies to all imports covered by goods declaration for consumption through a formal entry process, whether or not subject to duties and taxes. The order implements relevant sections of the Customs Modernization and Tariff Act (CMTA).

Imported goods are deemed “entered” for consumption when the goods declaration is electronically lodged, together with any required supporting documents, in the Bureau of Customs (BOC) electronic cargo clearance system portal. In addition to the required documents listed in Section 4.7 (i.e., as the Supplementary Declared Value Form, Bill of Lading or Airway Bill, Commercial Invoice, Packing List) the following supporting documents are required:

- a) Sanitary and Phytosanitary Import Clearance
- b) Authority to Release Imported Goods
- c) Certificate of Origin (for various Free Trade Agreements)
- d) Load Port Survey Report or Discharge Port Survey Report for Bulk or Break-Bulk Shipments

Additional information on Philippine Trade Facilitation initiatives is available here:
