Required Report: Required - Public Distribution  
Date: June 28, 2022  
Report Number: TU2022-0027

Report Name: Food and Agricultural Import Regulations and Standards Country Report

Country: Turkey  
Post: Ankara  
Report Category: FAIRS Annual Country Report

Prepared By: Nergiz Ozbek  
Approved By: Christine Mumma

Report Highlights:

This report outlines specific requirements for food and agricultural products to be imported into Turkey and was prepared by the USDA Foreign Agricultural Service’s Office of Agricultural Affairs in Ankara, Turkey for U.S. exporters of food and agricultural products. This report does not cover standards or requirements for products from third countries. It should be read in conjunction with the Food and Agricultural Import Regulations and Standards (FAIRS) Export Certificate Report- 2022 for Turkey. There have not been any major changes in food import regulations in Turkey in the last year. However, on July 31, 2021, the Ministry of Agriculture and Forestry ended the temporary Covid-related implementation allowing Phytosanitary Certificates and Veterinary Health Certificates to be e-mailed to the official control body in Turkey. As of August 1, 2021, original copies of these certificates are required to be sent at the time the product is imported to Turkey.
Disclaimer:
Please note that while every possible care was taken in the preparation of this report, information provided may not be completely accurate either because policies have changed since its preparation, or because clear and consistent information about these policies was not available. It is highly recommended that exporters verify the full set of import requirements with their foreign customers, who are normally best equipped to research such matters with local authorities, before any goods are shipped. FINAL IMPORT APPROVAL OF ANY PRODUCT IS SUBJECT TO THE IMPORTING COUNTRY’S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY.

TABLE OF CONTENTS

Executive summary
Section I: Food Laws
Section II: Labeling Requirements
Section III: Packaging and Container Regulations
Section IV: Food Additive Regulations
Section V: Pesticide and Other Contaminants
Section VI: Other Requirements, Regulations, and Registration Measures
Section VII: Other Specific Standards
Section VIII: Trademarks, Brand Names, and Intellectual Property Rights
Section IX: Import Procedures
Section X: Trade Facilitation
APPENDIX I: HS Codes of commodities which require obtaining a control certificate
APPENDIX I-A: HS Codes of animal and animal sourced products
APPENDIX I-B: HS Codes of seeds, seedlings, saplings and flower bulbs
APPENDIX II: HS Codes of commodities, which are not required to obtain a Control Certificate but are still subject to veterinary controls/inspections
APPENDIX III: Custom Gates designated for import controls of animal and animal-sourced products
APPENDIX IV: Custom Gates designated for forestry products with HS Codes 44.01, 44.03, 44.04, 44.06, 44.07, 44.15 and 44.16 which require quarantine controls
APPENDIX V: Custom Gates designated for the import controls of propagation materials (seed, seedlings, saplings, flower bulbs) which require quarantine controls
APPENDIX VI: Custom Gates designated for the import controls of products other than propagation materials which require quarantine controls
APPENDIX VII: Designated PAFD for the import controls of plant originated food and feed stuffs in the aspect of food and feed safety and materials which are intended for contact with food stuffs in the aspect of product safety
APPENDIX VIII: Government Regulatory Key Agency Contacts and Industry Associations
APPENDIX IX: Other Import Specialist Technical Contacts
APPENDIX X: Acronyms used in the Report

Turkey FAIRS Annual Country Report 2022
**Executive Summary**
The Republic of Turkey shares a Customs Union with the EU and is the 20th largest economy in the world. Although the Turkish economy stagnated recently, annual average GDP growth of 2-3 percent is forecast for 2022-2024. It has a young population of 84 million people fueling consumption. The median age is 32.4 and 59 percent of the population is between the ages 15 to 54. The urbanization rate has reached 76 percent with rapid urbanization since 2000. Along with the young population, high urbanization rate, increasing middle-class household income, and broadening base of female participation in the labor force, the culture of spending drives consumption. With the effects of Covid-19-related restrictions and stagnation in the economy, food inflation is a major concern but there has been no scarcity of food availability for those with adequate.

The U.S is among the top agricultural products suppliers to Turkey. Despite the global Covid-19 pandemic and the U.S. Dollar (USD) /Turkish Lira (TL) exchange rate fluctuations in the past year, there was a slight increase (in USD terms) in food and agricultural products’ total exports to Turkey, up from $1.3 billion in 2020 to $1.46 billion in 2021. The export was driven mainly by higher soybean sales due to the Turkish government’s approval of new biotech traits over the last year. Leading domestic export categories included cotton, soybean, distillers dried grains, tree nuts (almonds, walnuts), animals and animal products (live cattle and bovine semen), food and animal feed preparations, forestry products, and alcoholic beverages.

Turkey is a candidate country for membership in the European Union. The main target of Turkish food and agriculture policy is to harmonize the related laws and regulations with the European Union *acquis communitaire*. The Ministry of Agriculture and Forestry is the authority that prepares and enforces the majority of food and agricultural policy and regulations and is the contact point for international organizations in food and agricultural issues.

There are two main laws and more than one hundred implementing regulations which regulate food and feed safety, animal health and welfare, plant health, and agricultural biotechnology. In recent years the Turkish government has been informing international bodies, such as the World Trade Organization, more often than in the past about possible or actual regulation changes, but not all regulatory changes impacting trade are notified. Exporters should be aware that there may be some variation among provinces in applying legislation.

Additionally, as of July 31, 2021, the Ministry of Agriculture and Forestry ended the temporary Covid-related implementation allowing Phytosanitary Certificates and Veterinary Health Certificates to be e-mailed to the official control body in Turkey. As of August 1, 2021, original copies of these certificates are required to be sent at the time the product is imported to Turkey.

**Section I: Food Laws**
The main goal of Turkish food and agriculture policy is to harmonize the related laws and regulations with the European Union (EU) *acquis communitaire* in order to facilitate trade. In the scope of EU harmonization, the Turkish Government (GOT) issued Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed on June 13, 2010 with the objective of protecting and ensuring public health, food and feed safety, animal health and welfare, as well as plant health and consumer interests, while also taking environmental protection into consideration. It covers all stages of production,
processing and distribution of food, materials and articles that come in contact with food and feed, controls of residues of plant protection products, veterinary medicinal products and other residues and contaminants, control of epidemic or contagious animal diseases and harmful organisms in plants and plant products, welfare of farm and experimental animals and pet animals, feeding of animals, animal health and plant protection products, veterinary and plant health services, entry and exit procedures of live animals and products to the country, as well as related official controls and sanctions.

This law also gives authority for the principles and procedures relating to the production, packaging, sale, import, and export of spring water, drinking water, natural mineral water and water for medical purposes, and the principles and procedures relating to compliance with technical and hygienic rules, ensuring fulfillment of quality standards and monitoring and control of quality standards of potable and utility water to the Ministry of Health (MoH). MoH is also responsible for the principles and procedures relating to the production, import, export, and control of dietary foods for special medical purposes and approval of health claims to be used in the labels of foods and food supplements.

Following the presidential elections held on June 24, 2018, the Turkish Government was re-organized by Presidential Decree on July 10, 2018. The Ministry of Food, Agriculture, and Livestock was merged with the Ministry of Forestry and Water Affairs, becoming the Ministry of Agriculture and Forestry (MinAF). The decree law also established nine presidential policy councils. One of these councils is **Council of Health and Food Policies**, which is responsible for developing policies and strategies to increase the production of plant and animal products, food safety, biotechnology, and protection of domestic gene sources related to agriculture and livestock. Members of the council were appointed in October 2018. The Council has been conducting meetings with stakeholders in food and agricultural areas and prepares reports which gives advice in technical and scientific issues to the president of GOT and relevant government agencies depending on agricultural issues for policy making. On April 7th, 2020, the President of GOT announced that food and agricultural issues will be separated from the tasking of the Council of Health and Food Policies, and a new Council of Food, Agriculture, Forestry and Livestock Policies will be established. As of June 2022, the new Council has not been established yet.

Currently, MinAF is the competent authority with regard to food and feed safety and veterinary and phytosanitary issues in Turkey. Under MinAF, the General Directorate of Food and Control (GDFC) is the most important ministerial structure for food and feed safety, veterinary and phytosanitary policies, adoption of legislation related to these policies, relevant official controls and inspections at all stages of processing, distribution, and placing on the market, as well as ensuring animal health and welfare. The GDFC is the contact point for international organizations such as Codex Alimentarius Commission, European Food Safety Authority (EFSA), European and Mediterranean Plant Protection Organization (EPPO), World Organization for Animal Health (OIE), World Trade Organization (WTO) and the International Plant Protection Convention (IPPC).

Another important law is Law no. 5977 on Biosafety, which was published in the Official Gazette on March 3, 2010. The objective of this law is to establish and implement a biosafety system in order to prevent the potential risks of “genetically modified organisms” and products thereof obtained through modern biotechnological means within the context of scientific and technological advancements; protect human, animal and plant health; safeguard and ensure the sustainable use of the environment and biological diversity and to determine the procedures and principles governing the control, regulation and
monitoring of these activities. It governs all activities, including, but not limited to, the research, development, processing, placement on the market, monitoring, utilization, importation, exportation, transportation, preservation, packaging, labeling, and storage regarding genetically engineered products and products thereof.

In the scope of this law, a Biosafety Board was established in 2011, but following the move to an Executive Presidency in Turkey in 2018, the approval process and authority for biotechnology approvals has been transferred to MinAF. The Biosafety Board was abolished on July 9, 2018 by Decree Law 703, and MinAF was authorized on August 1, 2018 to conduct its tasks and responsibilities. There are currently 21 corn events and 15 soybean events approved for feed use in Turkey. No events are approved for food use or cultivation. For more information on Turkey’s biosafety policies, please refer to the GAIN Reports on Agricultural Biotechnology Annual Report-2021 for Turkey and Turkish Ministry of Agriculture and Forestry Approves Four More Biotech Events and GE Aspergillus oryzae - Keeps Total Number at 36 dated April 28, 2022 for the current approved events in Turkey. Veterinary medicinal products, human medicinal products, and cosmetics which acquired a license or received approval from the MoH do not fall under the scope of the Biosafety Law.

Enforcement of Turkish food and agriculture legislation is performed by 81 Provincial Agriculture and Forestry Directorates (PAFD) and 922 District Directorates (DD). The public laboratories of MinAF are involved in the official control system. These laboratories include: 39 Provincial Food Control Laboratories, one National Food Reference Laboratory, one Bursa Food and Feed Control Central Research Institute Laboratory, nine Veterinary Control Institute Laboratories, four Plant Quarantine Directorate Laboratories and seven Plant Protection Research Institute Laboratories, as well as 101 private food and feed control laboratories which are authorized and audited by MinAF. Auditing of directorates, districts, and laboratories is performed by GDFC officials.

The legal infrastructure of agriculture is mainly based on regulations and/or communiqués and/or circulars rather than on laws. The reason for this is that the Turkish constitutional system does not allow laws to be adopted, amended, or abolished easily. Therefore, governments have traditionally preferred to publish regulations, communiqués, directives or circulars, etc. The majority of the regulations on food and agricultural products are prepared and published by MinAF. However, there are also other applicable regulations published by other Ministries such as the Ministry of Health. More than one hundred implementing regulations of Law no. 5996 have been published and enforced by MinAF since 2011. In recent years, the Turkish government has been informing international bodies, such as the WTO, more often than the past about possible or actual regulation changes, but still not consistently. Exporters should be aware that there may be some variation among provinces in applying legislation. This may be due to the lack of guidelines for the enforcement of rules in some cases. Most Turkish food and agriculture-related laws, regulations, communiqués, directives, and circulars are available in Turkish on the website of the GDFC here and a few are in English here.

Section II: Labeling Requirements

General Requirements
On January 26, 2017, MinAF abolished the previous Turkish Food Codex Regulation on Labeling and published two separate regulations to replace it which include: The “Turkish Food Codex Regulation on Food Labeling and Provision of Information to Consumers” (available here in the Turkish language) and
“The Turkish Food Codex Regulation on Nutrition and Health Claims” (available here in the Turkish language). As with the prior versions of the regulations, these were prepared in parallel to the EU directives and regulations within the framework of EU harmonization.

A - Turkish Food Codex Regulation on Food Labeling and Information to Consumers
The Turkish Food Codex Regulation on Food Labeling and Information to Consumers establishes the general principles for requirements and responsibilities governing food information, and food labeling. It applies to food business operators at all stages of the food chain and all foods intended for the final consumer, including foods delivered by mass caterers, and foods intended for supply to mass caterers. According to the regulation, food information should not be misleading the consumer:

- as to the characteristics of the food, its nature, identity, properties, composition, quantity, durability, country of origin, method of manufacture or production,

- by attributing to the food effects or properties which it does not possess,

- by stating that the food possesses special characteristics when in fact all similar foods possess such characteristics, by specifically emphasizing the presence or absence of certain ingredients and/or nutrients,

- by implying by means of the appearance, the description or pictorial representations, the presence of a particular food or an ingredient, while in reality a component naturally present or an ingredient normally used in that food has been substituted with a different component or a different ingredient.

Food information shall be accurate, clear and easy to understand for the consumer. Subject to derogations provided for by regulation(s) of foods for nutritional uses, food information should not claim that the product can prevent, treat or cure a human disease, nor refer to such properties.

All the mentioned rules are applied to advertising and the presentation of foods, their shape, appearance or packaging, the packaging materials used, the way in which they are arranged and the setting in which they are displayed.

The importer is responsible for the imported food product’s food information and label. An imported food item may arrive in its original package, but a permanent “sticker” label, in Turkish, must be attached to the package before it is marketed. Each food must be labeled clearly, completely and accurately in the Turkish language before placing on the market. Other languages in addition to Turkish may also appear on the label and does not necessarily contain the mandatory information required by Turkish labelling regulation. However, information given through pictures, drawings, claims etc. on the original label of the product must also obey the rules set by Turkish labelling regulation. Labeling requirements are enforced by PAFD and DD (provincial and district directorates) officials. Turkish authorities do not grant exceptions to their labeling regulations.

The standard U.S. label may not comply with Turkish labeling requirements in the aspects of nutritional labeling, health claims, label size, etc.

**Compulsory Information**
The following compulsory information must appear on the packaging or on a label attached to it. The information must be marked in such a way that it is easily visible, clearly legible, and indelible. The following information is compulsory on labels of domestically produced and imported foods:

(1) the name of the food

(2) the list of ingredients

(3) certain substances and products (listed in Annex-1 of the Regulation) causing allergies or intolerances

(4) the quantity of certain ingredients or groups of ingredients

(5) the net quantity of the food

(6) the ‘use by…’ date or the ‘best before…’ date

(7) any special storage conditions and/or conditions of use

(8) the name or business name and address of the food business operator

(9) facility registration number

(10) country of origin

(11) instructions for use where it would be difficult to make appropriate use of the food in the absence of such instructions

(12) with respect to beverages containing more than 1.2% alcohol by volume, the actual alcoholic strength by volume

(13) a nutrition declaration

**Additional Compulsory Information**

In addition to the compulsory information listed above, additional information for specific types or categories of foods are given below:

(14) The statement “packaged in a protective atmosphere” for foods whose shelf-life has been extended by means of packaging gases is authorized pursuant to the Turkish Food Codex Regulation on Food Additives,

(15) For foods containing sweeteners:

- the statement “with sweetener(s)” or “contain sweetener(s)” for foods containing a sweetener or sweeteners is authorized pursuant to Turkish Food Codex Regulation on Food Additives, this statement shall accompany the name of the food

- the statement “contains sugar(s) and sweetener(s)” or “with sugar(s) and sweetener(s)” for foods containing both an added sugar or sugars and a sweetener or sweeteners is authorized
pursuant to Turkish Food Codex Regulation on Food Additives, this statement shall accompany the name of the food

- the statement “contains aspartame (a source of phenylalanine)” for foods containing aspartame/aspartame-acesulfame salt is authorized pursuant to Turkish Food Codex Regulation on Food Additives, the statement shall appear on the label in cases where aspartame/aspartame-acesulfame salt is designated in the list of ingredients only by reference to the E number. The statement “contains a source of phenylalanine” shall appear on the label in cases where aspartame/aspartame-acesulfame salt is designated in the list of ingredients by its specific name
- the statement “excessive consumption may produce laxative effects” for foods containing more than 10 percent added polyols authorized pursuant to Turkish Food Codex Regulation on Food Additives

(16) For foods containing glycyrrhizinic acid or its ammonium salt:

- Confectionery or beverages containing glycyrrhizinic acid or its ammonium salt due to the addition of the substance(s) as such or the licorice plant Glycyrrhiza glabra, at concentration of 100 mg/kg or 10 mg/l or above, the statement “contains licorice” shall be added immediately after the list of ingredients, unless the term ‘licorice’ is already included in the list of ingredients or in the name of the food. In the absence of a list of ingredients, the statement shall accompany the name of the food

- Confectionary containing glycyrrhizinic acid or its ammonium salt due to the addition of the substance(s) as such or the licorice plant Glycyrrhiza glabra at concentrations of 4 g/kg or above, the statement “contains licorice – people suffering from hypertension should avoid excessive consumption” shall be added immediately after the list of ingredients. In the absence of a list of ingredients, the statement shall accompany the name of the food.

- Beverages containing glycyrrhizinic acid or its ammonium salt due to the addition of the substance(s) as such or the licorice plant Glycyrrhiza glabra at concentrations of 50 mg/l or above, or of 300 mg/l or above in the case of beverages containing more than 1.2 percent by volume of alcohol, the statement “contains licorice – people suffering from hypertension should avoid excessive consumption” shall be added immediately after the list of ingredients. In the absence of a list of ingredients, the statement shall accompany the name of the food.

(17) For beverages with high caffeine content:

- The statement “High caffeine content. Not recommended for children or pregnant or breastfeeding women” for beverages, except for those based on coffee, tea or coffee or tea extract where the name of the food includes the term ‘coffee’ or ‘tea’, which:

  - o are intended for consumption without modification and contain caffeine, from whatever source, in a proportion in excess of 150 mg/l, or,

  - o are in concentrated or dried form and after reconstitution contain caffeine, from whatever source, in a proportion in excess of 150 mg/l,
The statement shall be in the same field of vision as the name of the beverage, followed by a reference in brackets and the caffeine content expressed in mg per 100 ml.

There is a vertical regulation on energy drinks that entered into force in 2017. There should be a warning on the label of energy drinks stating “Do not use this product with alcohol or by mixing with alcohol. Consumption of this product is not advised for children, people below 18 years old, elderly people, diabetics, people who have hypertension, pregnant or breastfeeding women, people who have metabolic disorder, kidney problem and those who are susceptible to caffeine. It is not a sport beverage; it should not be consumed before, during and after physical activity. It is advised not to consume more than 500 ml/day.”

Foods other than beverages, where caffeine is added with a physiological purpose, the statement “Contains caffeine. Not recommended for children or pregnant women” shall be in the same field of vision as the name of the food, followed by a reference in brackets and the caffeine content expressed in mg per 100 g or mg per 100 ml. In the case of food supplements, the caffeine content shall be expressed per portion as recommended for daily consumption on the label.

(18) For foods or food ingredients with added phytosterols, phytosterol esters, phytostanols or phytostanol esters, the following should be included:

- the statement “with added plant sterols” or “with added plant stanols” in the same field of vision as the name of the food;

- the amount of added phytosterols, phytosterol esters, phytostanols or phytostanol esters content (expressed in percent or as gram of free plant sterols/plant stanols per 100 g or 100 ml of the food) shall be stated in the list of ingredients;

- a statement that the food is intended exclusively for people who want to lower their blood cholesterol level;

- a statement that patients on cholesterol lowering medication should only consume the product under medical supervision;

- an easily visible statement that the food may not be nutritionally appropriate for pregnant or breastfeeding women and children under the age of 5 years;

- advice that the food is to be used as part of a balanced and varied diet, including regular consumption of fruit and vegetables to help maintain carotenoid levels;

- a statement that the consumption of more than 3 g/day of added plant sterols/plant stanols should be avoided;

- a definition of a portion of the food or food ingredient concerned (preferably in g or ml) with the amount of the plant sterol/plant stanol that each portion contains.
(19) The statement "contains alcohol" if ethyl alcohol is used as an ingredient in the manufacture or preparation of a food notwithstanding the amount of the alcohol.

(20) The statement "contains ... obtained from pigs" if the product contains any product/ingredient obtained from pigs, notwithstanding the amount of that product/ingredient.

(21) For frozen meat, frozen meat preparations, and frozen unprocessed fishery products; the date of freezing or the date of first freezing in cases where the product has been frozen more than once shall be on the label.

**Shelf-Life Labeling Requirements**

Article 27 of the Turkish Food Codex Regulation on Food Labelling and Provision of Information to Consumers sets the rules for labelling “Use by” date, minimum durability date, and date of freezing.

In the case of foods which, from a microbiological point of view, are highly perishable and are therefore likely after a short period to constitute an immediate danger to human health, the words “Use by...” is used on the label to indicate the shelf-life of the product. After the “use by” date, a food shall be deemed to be unsafe in accordance with Law 5996. For other products, the words “Best before...” is used to indicate the minimum durability (shelf-life) of the product if they are stored under appropriate conditions.

**“Use by...” date**
The “use by” date shall be indicated as follows:

(a) it shall be preceded by the words “use by ...”

(b) the words in point (a) shall be accompanied by:

- either the date itself, or,
- a reference to where the date is given on the labelling,

Those words shall be followed by a description of the storage conditions

(c) the date shall consist of the day, the month and, possibly, the year, in that order and in uncoded form

(d) the “use by” date shall be indicated on each individual prepacked portion

**Minimum durability (shelf-life) date**
The date of minimum durability shall be indicated as follows:

(a) the date shall be preceded by the words:

- “Best before ...” when the date includes an indication of the day
- “Best before end ...” in other cases

(b) the words referred to in point (a) shall be accompanied by:

- either the date itself, or,
- a reference to where the date is given on the labelling

If need be, these words shall be followed by a description of the storage conditions which must be observed if the product is to keep for the specified period
(c) the date shall consist of the day, the month and possibly, the year, in that order and in uncoded form.

However, in the case of foods:

- which will not keep for more than 3 months, an indication of the day and the month shall be sufficient,
- which will keep for more than 3 months but not more than 18 months, an indication of the month and year shall be sufficient,
- which will keep for more than 18 months, an indication of the year shall be sufficient,

(d) subject to Turkish Food Codex provisions imposing other types of date indication, an indication of the date of minimum durability (best before…) shall not be required for:

- fresh fruit and vegetables, including potatoes, which have not been peeled, cut or similarly treated (excluding sprouting seeds and similar products such as legume sprouts),
- wines, liqueur wines, sparkling wines, aromatized wines, and similar products obtained from fruit other than grapes, and beverages falling within CN code 2206 00 obtained from grapes or grape musts,
- beverages containing 10 % or more by volume of alcohol,
- bakers’ or pastry cooks’ wares which, given the nature of their content, are normally consumed within 24 hours of their manufacture,
- vinegar,
- cooking salt (excluding iodine salt)
- solid sugar,
- confectionery products consisting almost solely of flavored and/or colored sugars,
- chewing gums and similar chewing products,

**Date of freezing**

The date of freezing or the date of first freezing shall be indicated as follows:

(a) it shall be preceded by the words “Frozen on …”
(b) the words referred to in point (a) shall be accompanied by:

- the date itself, or,
- a reference to where the date is given on the labelling,
(c) the date shall consist of the day, the month and the year, in that order and in uncoded form.

In addition to compulsory labeling, certain foodstuffs such as infant and follow-on formulas, wines, aromatized wines, spirit drinks, food supplements, energy drinks, non-alcoholic beverages, sugar, honey, coffee, meat and meat products, fruit juice, and dairy products each have additional specific labeling requirements in their vertical communiques, all of which are available on MinAF’s website of [here](#) in the Turkish language.

Because of difficulties in fighting adulterated foods in categories such as baby foods, honey, energy drinks, black tea, food supplements and vegetable oil, MinAF has been working on implementing an additional single code system for these food categories. A system called “Product Verification Monitoring System (PVMS)” was introduced, through which consumers were supposed to able to verify information about purchased food products by using a 19-digit number. Because the related sectors
were not ready to implement the system, implementation was postponed several times and has been indefinitely suspended since January 2020.

**B - Turkish Food Codex Regulation on Nutritional and Health Claims**

This regulation applies to nutrition and health claims made whether in the labeling, presentation, or advertising of foods to be delivered as such to the final consumer. Nutrition and health claims may be used in the labeling, presentation and advertising of foods placed on the market. The use of nutrition and health claims shall not:

(a) be false, ambiguous or misleading,

(b) give rise to doubt about the safety and/or the nutritional adequacy of other foods,

(c) encourage or condone excess consumption of a food,

(d) state, suggest or imply that a balanced and varied diet cannot provide appropriate quantities of nutrients in general,

(e) refer to changes in bodily functions which could give rise to or exploit fear in the consumer, either textually or through pictorial, graphic or symbolic representations

**Nutritional Claims**

Nutritional labeling is mandatory when there is a nutritional claim and/or health claim made either on the label, or in some sort of presentation or advertisement of a foodstuff. Food supplements are outside of the scope of this requirement. This requirement is valid also for foods for special dietary purposes without prejudice to their vertical legislation. Nutritional labeling includes energy value, fats, carbohydrates, proteins (where required), fiber, and salt/sodium, vitamins and minerals. Reference Daily Intake Values for energy and nutrients are given below. For vitamins and minerals to be displayed on a label, the amount of vitamin/mineral that should be met is 15 percent of the reference intake values in 100 g or 100 ml foodstuff, other than beverages. For beverages, this amount should be 7.5 percent in 100 ml of product in question.

Nutritional claims and their requirements are given in detail in the regulation. Some examples of nutritional claims *allowed* in the Regulation on Labeling are as follows:

- If the energy value in 100 grams of solid food is not more than 40 kcal, a nutritional claim such as “low calorie/energy” might be on the label;

- If the energy value or nutrient amount is reduced 30 percent with respect to a similar product, the claim “reduced calorie/energy or nutrient” might be on the label;

- If the amount of alpha linolenic acid (ALA) amount is minimum 0.3 gr per 100 gr or 100 kcal food, the claim “source/contains/added Omega 3 fatty acids” might be on the label;

- If the 100 gr or 100 ml foodstuff contains less than 0.5 gr of sugar, the claim “sugar free” might be on the label.
To see the whole group of nutritional claims and their requirements allowed, please see the regulation here in the Turkish language.

**Health Claims**

On December 5, 2018, GOT published the Law no. 7151 amending some laws and decrees related to various health issues. Article 31 of this amending law abolished rules and conditions related to health claims in the Turkish Food Codex Regulation on Nutritional and Health Claims and authorized the Medicine and Medical Devices Agency (MMDA) of MoH related to evaluation, approval, presentation, advertising and labelling rules, and conditions related to health claims for food and food supplements. Products already marketed with the health claims authorized by MinAF on labels before December 5, 2018 will be continued to be marketed until new rules and conditions are set by MMDA. On March 8, 2022, MMDA opened the Draft Regulation on Health Claims for public comment via its website. The public comment period closed in April 2022. The Regulation has not been finalized as of June 2022. MMDA will not approve new health claims for products to be marketed until new rules are set.

According to the current Turkish Food Codex Regulation on Nutritional and Health Claims, health claims on the label, in a presentation, or in an advertisement of the health claims of the foodstuff, were allowed if at least two of the following conditions were met with respect to nutrient profile:¹

- maximum sodium amount is 100 mg/100kcal
- maximum 10 percent of energy value comes from saturated fatty acids
- maximum 10 percent of energy comes from added sugar
- minimum 55mg/100kcal calcium inherent

Claims not allowed were those which refer to:

- negative effects on health unless foodstuffs are consumed
- weight loss amount or rate
- advice of doctors or other medical persons

Some examples of health claims under specified conditions which were allowed are as follows:

- “Biotin contributes to normal macronutrient metabolism”
- “Biotin contributes to the maintenance of normal hair”
- “Calcium contributes to normal muscle function”

¹ The “health claims” portion of the Codex Regulation has been abolished by Law 7151, but products with claims that were previously approved can still place their products on the shelf until a replacement regulation is approved. New, unapproved claims are currently not allowed.
- “Chitosan contributes to the maintenance of normal blood cholesterol levels”
- “Choline contributes to the maintenance of normal liver function”
- “Glucomannan contributes to the maintenance of normal blood cholesterol levels”
- “Lactase enzyme improves lactose digestion in individuals who have difficulty digesting lactose”
- “Monacolin K from red yeast rice (Monascus purpureous) contributes to the maintenance of normal blood cholesterol levels”
- “Walnuts contribute to the improvement of the elasticity of blood vessels”
- “Zinc contributes to normal DNA synthesis”
- “Plant sterols and plant stanol esters have been shown to lower/reduce blood cholesterol. High cholesterol is a risk factor in the development of coronary heart disease”
- “Calcium helps to reduce the loss of bone mineral in post-menopausal women. Low bone mineral density is a risk factor for osteoporotic bone fractures”
- “Supplemental folic acid intake increases maternal folate status. Low maternal folate status is a risk factor in the development of neural tube defects in the developing fetus”
- “Vitamin D is needed for normal growth and development of bone in children”

To see the whole group of health claims and their requirements allowed, please see the regulation here in the Turkish language.

**Labelling for Baby Foods**

Baby foods, except those used for medical purposes, are regulated by MinAF under two vertical Communiques which are the Turkish Food Codex Communique on Infant and Follow-on Formulas and the Turkish Food Codex Communique on Supplementary Foods for Babies and Young Children. According to the Communiques, baby means children under age of 12 months and young children means children aged between one and three years.

In addition to the compulsory information set by Turkish Food Codex Regulation on Food Labeling and Information to Consumers, both Communiques set specific additional compulsory labelling requirements for products which fall in the scope of these Communiques.

**Additional Compulsory Labelling for Infant Formula**

An infant formula must have below additional requirements on the label:

- a statement that the product is suitable for infants from birth when they are not breast fed
• instructions for appropriate preparation, storage and disposal of the product and a warning against the health hazards of inappropriate preparation and storage

• a statement concerning the superiority of breast feeding and a statement recommending that the product be used only on the advice of persons having qualifications in medicine, nutrition or pharmacy, or other professionals responsible for maternal and childcare

A nutrition claim is not allowed on the label of infant formula.

**Additional Compulsory Labelling for Follow-on Formula**

A Follow-on formula must have below additional requirements on the label:

• a statement that the product is suitable only for infants over the age of six months, that it should form only part of a diversified diet, that it is not to be used as a substitute for breast milk during the first six months of life and that the decision to begin complementary feeding, including any exception to six months of age, should be made only on the advice of persons having qualifications in medicine, nutrition or pharmacy, or other professionals responsible for maternal and child care, based on the individual infant's specific growth and development needs

• instructions for appropriate preparation, storage and disposal of the product and a warning against the health hazards of inappropriate preparation and storage,

A nutrition claim is allowed on the label of follow-on formula in line with the rules set by Regulation on Food Labeling and Information to Consumers.

The labelling, presentation and advertising of infant formula and follow-on formula must provide the necessary information about the appropriate use of the products, so as not to discourage breast feeding.

The labelling, presentation and advertising of infant formula and follow-on formula must not use the terms ‘humanized’, ‘materialized’, ‘adapted’, or terms similar to them and must be designed in such a way that it avoids any risk of confusion between infant formula and follow-on formula and enables consumers to make a clear distinction between them, in particular as to the text, images, and colors used.

The statement “lactose only” may be used for infant formula and follow-on formula, provided that lactose is the only carbohydrate present in the product. The statement “lactose free” or “does not contain lactose” may be used for infant formula and follow-on formula provided that the lactose content in the product is not greater than 10 mg/100 kcal (2.5 mg/100 kJ).

When the statement “lactose free” is used for infant formula and follow-on formula manufactured from protein sources other than soy protein isolates, it should be accompanied by the statement “not suitable for infants with galactosaemia”, which should be indicated with the same font size and prominence as the statement “lactose free” or “does not contain lactose” and in close proximity to it.

Turkish Food Codex Communique on Infant and Follow-on Formulas is accessible [here](#) in the Turkish language.

**Additional Compulsory Labelling for Supplementary Foods**
Supplementary baby foods are defined as baby foods which are processed cereal-based and baby foods other than processed cereal-based foods in the Turkish Food Codex Communique on Supplementary Foods for Babies and Young Children which is accessible here in the Turkish language.

In addition to the compulsory information set by Turkish Food Codex Regulation on Food Labeling and Information to Consumers, the Communique on *Supplementary Foods for Babies and Young Children* sets specific additional compulsory labelling requirements for the products which fall in the scope of the Communique. A Supplementary Food for Baby and Young Children must have below additional requirements on the label:

- the stated age must not be less than four months for any product,
- the statement “This product should be used based on the advice of healthcare professional”,
- information as to the presence or absence of gluten if the indicated age from which the product may be used is below six months.

**Labeling for food and feed containing, consisting of, or deriving from GMOs**

In addition to general labeling rules, specific labeling rules for food and feed containing/consisting of, or deriving from genetically engineered products, are set in the Article 18 of the Regulation on Genetically Modified Organisms and its Products published in Official Gazette dated August 13, 2010 and amended twice in 2012 and 2014. Currently, there are no genetically engineered events approved for food use in Turkey. As of June 2022, there are 21 corn events and 15 soybean events approved for feed use. Imported feed into Turkey must be labeled “contains GMO” if it contains approved genetically engineered content over 0.9 percent within a given shipment. This regulation is available here in the Turkish language.

**Labeling for Organic Agricultural Products**

If a product is produced in Turkey and marketed domestically in line with the requirements of the Turkish organic legislation, then the label should have the Turkish organic logo and the word “organic”. Imported organic products are controlled / inspected according to the Turkish organic legislation and re-certified as organic if it complies with the organic legislation. This situation is also indicated on the label. Both domestically produced or imported non-organic agricultural products should not have packages or boxes or labels designed as if the product is organic. For example, labels of non-organic products should not have the words, “bio”, “biyo”, “eco”, “eko”, “org” which implies and misleads the consumer that the product is organic. Ninety-five percent of agricultural ingredients of processed products should be produced in compliance with the organic laws in force for the product to be labeled as organic.

Please see Chapter Five of the Regulation on Organic Agriculture Principles and Practices here in the Turkish language. Chapter Five of the regulation gives detailed requirements about packaging and labeling of organic agricultural products to be marketed in Turkey.

**Labeling for plant-based meat/dairy alternatives**

Plant based meat and dairy alternatives are not regulated under specific regulation or communique. These products are subjected to the general rules of Turkish Food Codex Regulation on Food Labeling
and Provision of Information to Consumers. Ingredients of such products must clearly be given on the labels in descending order. The name, appearance, pictorial representation of the product in question must not mislead consumers by implying the food in question is substitute of meat/dairy or similar to meat/dairy.

**Labeling of irradiated foods**

Irradiation of foodstuffs is regulated under the Regulation on Food Irradiation which was published in the Official Gazette dated October 3, 2019 and available [here](#) in the Turkish language. Foodstuff groups and irradiation doses are given in Annex-2 of the regulation. According to Annex-2, seven food categories are allowed to be irradiated in Turkey. They are:

- bulbs, roots, fresh and frozen fruits and vegetables,
- cereals, milled cereals, stone fruits, oil seeds, pulses, dried fruits,
- raw fish, crustaceans and their products (fresh and frozen), frozen frog leg,
- poultry, red meat and their products (raw or frozen)
- dried vegetables, spices, dried aromatic herbs, seasonings and herbal tea
- animal-sourced dried foods

Chapter Four of the regulation sets the rules for the labeling of irradiated foodstuffs as follows:

a) if the product is sold as packaged form, one of the words 'irradiated' or 'treated with ionizing radiation' must be present on the label, in addition to the green international food irradiation symbol

b) if the product is sold as bulk, the words ‘irradiated' or ‘treated with ionizing radiation’ must be present on the label or products’ commercial documents, in addition to the green international food irradiation symbol

c) if the product contains an irradiated ingredient, the words ‘irradiated' or ‘treated with ionizing radiation' must accompany the ingredient in question on the label

d) if the product contains composite ingredients which have an irradiated ingredient, the words ‘irradiated' or ‘treated with ionizing radiation' must accompany the ingredients of the composite ingredient in question, on the label.

**Advertising**

The Ministry of Trade published the Amending Regulation on Commercial Advertisement and Unfair Commercial Practices in the Official Gazette on December 28, 2018. This regulation prohibits radio and television programs, or channels aimed at children from running advertisements at the beginning, during, or at the end of shows of any foods or beverages that fall under the Ministry of Health's "red category," which includes chocolate, candy, wafers, energy bars, sweet sauces, desserts, cakes, cookies, chips, fruit juices, energy drinks, soda pop, sugars, and popsicles. Additionally, advertisements in radio and television programs not aimed at children will need to contain written or verbal warnings encouraging a proper and balanced diet as a clearly visible banner. In other
mediums of advertisement, the written or verbal warnings should be included in a manner that is suitable to that medium. Additionally, the introduced article prohibits promotions and similar marketing tools aimed at children with the goal of increasing the sale of those foods. This regulation entered into force on June 30, 2019.

**Front of Package Nutrition Labeling**

In January 2019, MinAF notified a “Draft Turkish Food Codex Regulation on Food Labeling and Information to Consumers” to the WTO. The proposed draft regulation requires red, yellow, or green color-coding, which resemble a traffic light, on all packaged foods, based on specified nutrient thresholds for salt, saturated fat, oil, and sugar. Some are concerned that this may lead consumers to avoid certain foods that may contain beneficial nutrients or contribute to consumer confusion. The regulation has not been finalized as of June 2022.

**Section III: Packaging and Container Regulations**

The Turkish Food Codex Regulation on Materials and Articles Intended to Come into Contact with Food was originally published by MinAF in the Official Gazette on December 29, 2011, and it was replaced by a regulation published on April 5, 2018 and amended once on February 8, 2019. The regulation, which is available here in the Turkish language, applies to materials and articles, including active and smart packaging materials/food contact materials and articles, which in their finished state:

- are intended to be brought into contact with food,
- are already in contact with food,
- can reasonably be expected to be brought into contact with food or to transfer their constituents to food under normal or foreseeable conditions of use and were intended for that purpose.

This regulation does not apply to materials and articles which are antiques, or covering or coating materials, such as the materials covering cheese rinds, prepared meat products or fruits which form part of the food and may be consumed together with this food, and fixed public or private water supply equipment.

This regulation sets the general and specific requirements for materials and articles intended to come into contact with food and specific requirements for active and intelligent food contact materials and articles and labeling of these.

Under the framework regulation, there are specific communiques for materials and articles made of regenerated cellulose film, ceramic articles, and plastic materials and articles which set the specific rules for these materials and articles. There is no special packaging or container size required or preferred by MinAF’s regulations. These regulations are available here in Turkish language.

**Packaging Sustainability Measures**

There is a Regulation on Waste Disposal Management which was announced by the Ministry of Environment, Urbanization, and Climate Change (MinEUCC) in the Official Gazette dated April 2,
MinEUCC announced a Regulation on Packaging Waste Control, which defined the conditions for re-use and recycling of packages, and responsibilities of different parties about recycling, on December 27, 2017. The Regulation was updated on March 3, 2020. On June 6, 2021 MinEUCC abolished the previous Regulation on Packaging Waste Control to replace it with the new Regulation on Packaging Waste Control. The new Regulation lays down provisions for the development and protection of the environment in a sustainable manner, relating to:

- responsibilities and liabilities of businesses for the production and marketing of packages with certain standards, conditions and qualifications,
- prevention of the formation of packaging waste, and reduction of the amount of unavoidable packaging waste to be disposed of by re-use, recycling and recovery methods,
- management of packaging wastes within a significant management system, including deposit management and zero-waste management systems,
- implementation of a deposit management system.

The Regulation on Packaging Waste Control applies to all packages and their wastes placed in the market. It aims to ensure the collection of packaging wastes within the scope of the zero-waste management system in line with the provisions of the Zero Waste Regulation which was published in 2019 and updated in 2021. According to the Article 13 of the Regulation on Packaging Waste Control, producers should ensure that the heavy metal (lead, cadmium, mercury, chromium) content amount of the packaging material must not exceed 100 ppm. Moreover, Section Six of the regulation requires responsible parties to target 55 percent recycling of materials between years 2021-2025, 65 percent between years 2026-2030 and 70 percent from the year 2031. The Regulation is accessible here in the Turkish language.

Section IV: Food Additives Regulations

The food additives section of the Turkish legislation is quite detailed and was prepared in an effort to conform to EU regulations. However, there are discrepancies from EU regulations, especially for use of additives in traditional products.

This regulation specifies general conditions for inclusion and use of food additives in the list. It sets the food additive functional groups, names of food additives, defines the food categories, and lists maximum amounts and conditions of additives allowed in defined food categories, as well as exceptions and restrictions. It also lists food items in which food additives are not allowed to be used and lists certain food additives which are not allowed to be used for certain traditional foods, such as fermented
sucuk (traditional spicy beef sausage), heat-treated sucuk, poultry döner, döner, köfte, pastırma, pekmez, pide, bazlama and ciğ köfte.

For example, E-620-625 (Glutamic acid-glutamates) and E-626-635 (Ribonucleotides), which are flavor enhancers, are prohibited for use in cured meat products such as pastırma, sucuk, heat-treated sucuk, poultry döner and köfte. MinAF states that the reason for this prohibition is to protect the traditional nature of these products and prevent unnecessary usage of additives. In addition, nitrates are banned in the following traditional meat products: döner, poultry döner, and köfte. MinAF states that the aim of this prohibition is to prevent additives being used unless considered technically necessary. Enzymes are outside of the scope of this regulation. The regulation is available here in the Turkish Language.

For an additive to be added to the list of the regulation, the applicant should contact GDFC. The National Food Codex Commission operating under GDFC has the authority to decide the inclusion of additive in question to the list. MinAF has been working on the amendment of the current Regulation but has not finalized it as of June 2022.

**Section V: Pesticides and Other Contaminants**

Pesticides are required to be approved by MinAF before being placed on the market. The validity of approval is 10 years. If the approval conditions are continued, the validity can be extended 10 more years.

MinAF abolished its previous regulation and published the revised Turkish Food Codex Regulation on Maximum Residue Levels of Pesticides on September 27, 2021.

This regulation also covers foodstuffs of plant and animal origin to be used as fresh, processed and/or composite food in or on which pesticide residues may be present. It does not apply to the manufacture of products other than food, or sowing or planting, or products used for authorization of active substances in line with relevant legislation. The regulation has five Annexes:

- Annex-1, animal and plant origin foodstuff categories, sub-categories, and names of foodstuffs
- Annex-2, Maximum Residue Levels (MRLs) of Pesticides which are authorized in Turkey and also pesticides which of their MRLs are not required to set
- Annex-3, MRLs authorized for products to be imported, MRLs of pesticides given in the Annex-2 for animal products and LOD (Level of Detection) for some pesticides
- Annex-4, Pesticides no longer authorized for usage in Turkey
- Annex-5, Pesticides which are not required to set MRLs for products to be imported

The regulation is updated occasionally by MinAF and available here in the Turkish language. For detailed information about plant protection products including pesticides, please see the GAIN Report on Plant Protection Products and Maximum Residue Limits of Pesticides Regulations dated January 09, 2020.
The current Turkish Food Codex Regulation on Pharmacologically Active Substances and Their Classification Regarding Maximum Residue Limits in Foodstuffs of Animal Origin was published in the Official Gazette on March 7, 2017 and was amended twice in 2019 and once in 2021. Pharmacologically active substances, animal type, target tissue, and other conditions, such as name of residue and maximum residue limits, are set in the Regulation, available here in the Turkish language.

The Turkish Food Codex Regulation on Contaminants was published in the Official Gazette no. 28157, dated December 29, 2011, and amended once in 2012. It sets the maximum levels of the certain contaminants (nitrates, mycotoxins, heavy metals, 3-monochloropropane-1,2-diol (3-MCPD), dioxins and dioxin-like PCBs, Polycyclic aromatic hydrocarbons and erucic acid) in foodstuffs. It is available here in the Turkish language.

All three regulations were prepared by MinAF within the scope of Turkey’s harmonization to the EU; however, there are some differences compared to the EU legislation in these regulations. The Turkish Food Law maintains provisions for regulators to refer to the Codex Alimentarius or EU Directives if the pesticides, contaminants, or pharmacologically active substances are not contained in the Turkish Food Codex. Enforcement of these regulations is carried out by Provincial Agricultural Directorates of MinAF.

Section VI: Other Requirements, Regulations, and Registration Measures

Turkey is gradually implementing approval requirements of facilities in exporting countries. There is no general approval process for these facilities.

For animal-sourced food products for human consumption, if the model export certificate requires a facility approval number, then the facility must have an approval number from the related agencies of that country.

For animal byproducts, such as hides and skins, offal, dog chews, and blood or fish meal for animal feed, if the facility is already on the EU-approved list, there is no need to conduct approval procedures and the facility is directly accepted as approved by MinAF. If the facility is not in the EU-approved list, then approval by MinAF is required. This process has been started with hides and skins and continued with animal byproducts for animal feed. MinAF prepares the approval process and questionnaires in the Turkish and English languages, which can be received via importer. Once the facility is approved and no new problems arise, there is no expiration date for registration/approval of that facility unless approval conditions are changed. There is no cost or fee for the exporting facility/country for the approval process. For approved establishments in foreign countries for the export of animal byproducts to Turkey, please click here.

If there is no EU approval number, facilities producing animal byproducts in the United States should contact the relevant U.S. agencies for the approval procedures to be started. Then the U.S. agencies would need to inspect the facility according to Turkey’s relevant requirements and guarantee that the facility is in compliance with the relevant Turkish requirements. MinAF may prefer to inspect the facility itself to determine the compliance of the facility with Turkish requirements. In this case, as a first step, MinAF will send a questionnaire to the relevant U.S. agencies for the exporting facility;
communication between the two governments is crucial in this process. After receiving the completed questionnaire from the U.S. agencies, MinAF visits the exporting facility to audit it and meet with the relevant U.S. agencies.

For bovine semen, the facility must be on the EU-approved establishment list. Please click here to see the EU-approved establishment list by countries.

For meat, there are approval procedures in place for slaughterhouses in exporting countries which are authorized for meat import to Turkey. For the approved slaughterhouses in exporting countries, please click here.

For live cattle, the assembly center, if any, must fulfil the conditions for its approval determined by the competent authority in the United States.

For plant origin food products, upon the importer’s request, MinAF may register/approve the facility of the exporting country for the purpose of decreasing the frequency of the physical inspections at import (taking samples of the product at Turkey’s border). The first step of the approval procedure is that MinAF will send the questionnaire (Questionnaire for pre-export checks in order to approve the establishment of the exporting country) to the importer. The importer then delivers the questionnaire to the exporter and the exporter provides all the necessary information related to the competent authority of the exporting country, legislation, facility information, and product information which is requested in the questionnaire. MinAF then reviews the filled-out questionnaire and visits the facility to inspect it and meets with the relevant agency which is responsible for the official controls of that facility. After the visit, MinAF prepares an evaluation report and if the results of the visit comply with the Turkish requirements, then the facility is approved within about two months. Once the facility is approved, the products exported from this facility are subject to a decreased rate of testing during import controls. Analysis frequencies may be decreased to the levels of three to five percent after the approval. Approval is valid for three years if all conditions remain the same. There is no cost or fee for the exporting facility/country for this approval process. MinAF suspended the facility approval process in 2021 due to the Covid-19 pandemic.

There is no product registration or approval procedure in place for other animal or plant origin products, except food supplements.

Food supplements are regulated by Turkish Food Codex Communique on Food Supplements published in the Official Gazette dated August 16, 2013 and updated twice in 2015 and 2017. The Communique is accessible here in the Turkish language. Food supplements require product approval to be imported into Turkey. The food business operator (importer, producer, seller, etc.) should fill out an application for each product and submit it to MinAF with the required information given below:

- trade name or brand of product,
- name and address of the company
- ingredient list of product in percentages
Food supplement applications are made to the provincial directorates of MinAF. Evaluations and approvals of the products for consumers (other than products for children ages 2-4) are made by provincial directorates of MinAF. The products for 2-4-year-old children are evaluated and approved by the committee established under the GDFC at the central government level. Once it is approved by the relevant provincial directorate, then it can be sold throughout the country. Applicants must pay an approval fee for each product approval, and the fee amount is updated each year. The approval fee was 10,000 TL/product ($1,125 USD/product at average 1USD=8.89 TL exchange rate) for the year 2021 and 12,200 TL/product ($756 USD/product at 1USD=16,13 TL exchange rate on May 24, 2022) for the year 2022. There is no expiration date for approval unless conditions change.

**Control Certificate**

For the importation of animals and animal products for which HS codes are given in Appendix I-A, and plant materials for production such as seed, seedlings, saplings, and flower bulbs for which HS codes are given in Appendix I-B, a “Control Certificate” is required prior to import. This is considered as pre-import permission and it states whether the product is eligible for import or not.

**Control Certificates for Animals and Animal Sourced Products**

For animals and animal sourced products for which HS Codes are given in the Appendix I-A and are subject to veterinary controls, a **Control Certificate** is required. The Control Certificate needs to be approved by the GDFC or authorized PAFDs according to the type of product. Once issued, the Control Certificate is valid for four months. However, for the HS codes; 0504.00, 15.04, 1516.10, 15.17, 1518.00, 18.06, 19.01, 19.02, 19.04, 19.05, 2103.90.90, 21.04, 2105.00, 21.06, 2202.99, 2208.70, the Control Certificate is valid for 12 (twelve) months. These time periods cannot be extended.

MinAF does not allow the import of live animals and animal products, and will not issue a Control Certificate, for products coming from countries or regions in which certain animal diseases exist. A current list of those countries, regions, diseases, and products are listed at the website of MinAF [here](#). The importer should fill out an application and provide the following required documents in order to receive the Control Certificate:
1. Completed Control Certificate Form

2. Proforma invoice or invoice

3. Sample veterinary health certificate (not required for live cattle intended for slaughter, feeder and breeding and sheep/goats)

4. Country of origin document (not required if the veterinary health certificate includes the origin of the products)

5. Ingredient list

6. For food supplements, food for special dietary purposes and for products and feed where national legislation does not exist, specification document

7. Label/draft label for products to be placed on the market for the ultimate consumer

8. CITES document if products to be imported are under scope of CITES

9. ICCAT document (BCD/eBCD) for Atlantic Bluefin Tuna (Thunnus thynnus) and Pacific Bluefin Tuna (Thunnus orientalis)

10. Commercial Activity Certificate or Trade Registry Gazette where importer is registered

11. Other documents, as MinAF requests, according to the nature of the commodity to be imported

After the Control Certificate is approved, the permission is registered in Turkey’s Food Safety Information System for animal-sourced food products.

For animals and animal sourced products for which HS codes are given in the Appendix II, and are subject to veterinary controls, a Control Certificate is not required.

A Control Certificate is not required for live animals intended for:

- Racing or exhibitions for a certain period of time.
- Presents to be introduced to civil or military statesmen
- Exhibitions at private or public zoos
- Donations and scientific research for universities and other research institutes

Control Certificates for Plant Products

For seeds, seedlings, saplings, and certain plant materials for production such as flower bulbs for which HS codes are given in Appendix I-B, a Control Certificate is required to be approved by MinAF’s
central level or authorized PAFDs according to the type of the products prior to import. Once issued, the Control Certificate is valid for six months. This time period cannot be extended.

The Biosafety Law does not allow for the production/cultivation of genetically engineered (GE) crops in Turkey, therefore, the importation of GE seed, seedlings, saplings, and certain plant materials for production, such as flower bulbs, is not allowed.

For seeds, seedlings, saplings, and production materials, an individual **preliminary permit application** is required for each Control Certificate. For the preliminary permit of *seeds of field plant, vegetables, feed plants, grass plants, medicinal and aromatic plants*, the following documents are required:

- a. Petition for Application
- b. Filled Control Certificate Form
- c. Original copy of invoice/pro-forma invoice or its copy certified by importer. Items required to be included in invoice/pro forma invoice:
  1. Invoice/Pro-forma invoice date and number (date cannot be older than six months),
  2. Type and variety of seed to be imported
  3. Quantity, lot/batch number and monetary value of seed to be imported,
  4. Name, authorized signature, and seal of importer
  5. Contact details of exporter
- d. Letter of Commitment given by importer stating that seed is non-GMO,
  1. A document given by exporter certifying that seed is not GMO. In cases where the document is a copy, it must be vouched for by the importer. Exporters can also declare non-GMO statement on pro-forma invoice,
  2. Unless a non-GMO document is provided by the exporter, an analysis report certifying that it is non-GMO shall be required
- e. Seed Certificate
  1. There is no certificate requirement for imports designated for trials, breeding, providing material for the gene bank
  2. For the imports of propagating materials:
    a. An OECD certificate is required for seeds of field crops and feed plants
    b. For other plant groups, OECD certificate or ISTA-Orange certificate or seed analysis report taken from national or federal seed laboratory is required.
  3. For commercial purpose imports (trade purpose)
    a. An OECD certificate is required for seeds of field crops and feed plants. If laboratory analysis results of the seed are not indicated on the OECD certificate, then an ISTA-Orange certificate is required. For seeds which will be re-packaged and re-certificated in Turkey, an ISTA-Orange certificate is not required.
    b. For grass seed an OECD certificate or ISTA-Orange certificate or seed analysis report taken from a national or federal seed laboratory is required. If laboratory analysis results of the seed are not indicated on the OECD certificate, then an ISTA-Orange certificate or seed analysis report taken from a national or federal seed laboratory is required. For mixed grass seeds, these certificates or reports will be required for each seed in the mixture.
    c. For tobacco seed, an OECD certificate or ISTA certificate or seed analysis report taken from national or federal seed laboratory is required.
d. For flint corn seed, sweet corn seed, and vegetable seeds, an OECD certificate or ISTA-Orange certificate is required. If laboratory analysis results are not indicated on the OECD certificate, then an ISTA-Orange certificate is required.

e. For medicinal and aromatic herbs, OECD certificate or ISTA certificate or seed analysis report taken from a national or federal seed laboratory is required.

4. For imports for export purpose:
   a. An OECD certificate is required for seeds of field crops and feed plants. If analysis results of laboratory tests for the seed are not indicated on the OECD certificate, then an ISTA-Orange certificate is required. For seeds which will be re-packaged and re-certificated in Turkey, an ISTA-Orange certificate is not required.
   b. For other plant groups, an OECD certificate or ISTA-Orange certificate or analysis report taken from a national or federal seed laboratory is required.

f. Preliminary import permit bank receipt demonstrating that the application fee has been paid,
g. Other documents that MinAF requires.

For additional information on the seed sector in Turkey, please see the FAS GAIN Report on Turkey Planting Seeds Sector Overview.

For a preliminary permit of seedlings, saplings, and production materials the following documents are required:

a. Petition for Application
b. Filled Control Certificate Form
c. Original copy of invoice/pro-forma invoice or its copy certified by importer. Items required to be included in invoice/pro-forma invoice:
   1. Invoice/Pro-forma invoice date and number (date cannot be older than six months)
   2. Type and variety of seed to be imported
   3. Quantity, lot/batch number and monetary value of seed to be imported
   4. Name, authorized signature, and seal of importer
   5. Contact details of exporter
d. Letter of Commitment given by importer stating that seed is non-GMO
   o A document given by exporter certifying that seed is not GMO. In case such document is a copy, it must be approved by the importer. Exporter can also declare non-GMO statement on pro-forma invoice
   o Unless a non-GMO document is provided by the exporter, an analysis report certifying that it is non-GMO shall be provided by importer
e. Preliminary import permit bank receipt showing that the application fee has been paid,
f. Other documents which are required by MinAF.

According to import control regulations, food and feed of plant origin and materials and articles intended to come into contact with food do not require Control Certificate approval to be imported. Instead, there is a pre-notification system in place for these commodities. The importer should register the required information for each product in the electronic system which is called the Food Safety Information System (FSIS) of GDFC, which is accessible by importers. The required information includes the product name, product category, country of origin, name of importer, name of exporter or
manufacturer, ingredient list, and label of the product. This information is evaluated and approved by the authorized Provincial Agriculture and Forestry Directorate (PAFD) to determine whether it complies with the legislation in force. There is no pre-shipment testing requirement that must be met or inspections that must be conducted prior to shipment. PAFD’s inspectors conduct official controls and inspections according to sampling and testing procedures at Turkish customs during the import stage.

For the detailed information about export certificates other than Control Certificate that GOT requires for agricultural products to be imported into Turkey, please see the FAS GAIN Report on Food and Agricultural Import Regulations and Standards Export Certificate Report 2022 for Turkey which is accessible here.

Import Process Complexities and Exceptions
While many U.S. and foreign foods are imported into Turkey without any problem, some companies have encountered difficulty understanding and complying with demands from import officials for certificates that are not normally issued in the United States. Requirements and standards for some imported foods may be stricter or different than both those currently applied in the EU.

Requirements for sending samples are slightly different for products intended for consumption. For the import of samples, there is no pre-permission or Control Certificate requirement. Technically, there are no documentation requirements if the sample is for an exhibition or scientific research. For commercial samples, the importer needs to fill out a special form supplied by PAFD and provide a copy of the pro-forma invoice (if it is free of charge, just state the use on the invoice). Once the PAFD receives the filled-out form, they prepare a letter to the relevant customs office to notify them to release the sample. Note that there is no health certificate requirement. For the commercial sample amounts, please see Section IX.

Section VII: Other Specific Standards

MinAF follows a dual approach in the preparation of food regulations. There is “horizontal" legislation which covers aspects which are common to all foodstuffs such as additives, contaminants, labeling, hygiene, official controls, etc. The "vertical" legislation applies to specific products such as food supplements, wine, spirit drinks, meat and meat products, infant and follow-on formulas, honey, fruit juices, etc.

Some of the important horizontal regulations are below, and they are accessible here in the Turkish language:

<table>
<thead>
<tr>
<th>Name of the Regulation</th>
<th>Important articles</th>
</tr>
</thead>
</table>
| Official import controls of food and feed products of plant origin | -Based on Turkish Government Law no. 5996 on Veterinary Services, Phytosanitary, Food and Feed  
-Importers should get an electronic username and password for pre-notification |
- Importers should electronically fill attached-pre-notification form (form is attached to the regulation) for plant origin food; feed and food contact material and attached copies of certificate, ingredient list, and other documents which will be determined by MinAF.

- Border inspection post or provincial directorates provide a date of inspection

- Frequency of analysis is determined by risk analysis

- If there is non-compliance, importers can either use special treatment, declare change in intent of use, send it back, or confiscate the product

- If there is a protocol between two countries, an electronic certificate will be accepted

- Turkish translation labeling should be done before actual import control is carried out

**Measurements to monitor certain substances and their residue on live animals and animal products.**

- EU harmonization regulation, 96/23/EC
- EU harmonization regulation, 97/747/EC
- If inspectors detect residues for imported animals or animal products, they will increase the frequency of analysis from the same country of origin

**Food Hygiene**

- EU harmonization regulation, 852/2004/EC
- Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed
- Defines general hygiene criteria for premises including HACCP criteria and good management practices

**Plant Quarantine**

- Based on Turkish Government Law no. 5996 on Veterinary Services, Phytosanitary, Food and Feed
- Includes the determination of harmful organisms hindering import and the issues that plants, plant products and other substances shall be subject to in terms of plant health in the entry and exit procedures for Turkey and also the official controls
- Products brought into free zones from abroad, those imported into Turkey from free zones, and those dispatched to outside the customs area of Turkey from free zones are subject to the provisions of this regulation
| **Official controls of food and feed** | - Determines the rules for official control, entry-exit gates, import controls, transit controls, list of plants, plant products and other substances banned for entry, list of harmful organisms that are banned from entering Turkey, special conditions that plants, plant products, and other substances are subjected to, and Phytosanitary Certificates  
- Based on Turkish Government Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- MinAF may delegate some of their control and inspection authority to accredited private food control offices or some NGOs. Import and export controls are excluded.  
- Authorizes MinAF to publish the list of approved establishments, approval-suspended premises, and approval-cancelled establishments, to increase transparency.  
- Defined traceability, responsibility, and general requirements for imports and exports  
- Establishes rapid alert system |
| **Pre-notification and veterinary checks of animal and animal products entering the country** | - EU harmonization regulation, 282/2004/EC  
- EU harmonization regulation, 136/2004/EC  
- Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- Pre-notification of imports of animals and animal products  
- Veterinarian responsibilities to check and sign forms |
| **Specific rules for animal products official inspections** | - EU harmonization regulation, 854/2004/EC  
- Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- Approval of premises  
- General hygiene rules  
- Raw meat inspections  
- Role and duties of official veterinarian and their assistant  
- Live animal inspections and animal welfare |
| **Veterinary checks and pre-notification on animals and products entering the country** | EU harmonization regulation, 97/78/EC  
- Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- Pre-notification and veterinary checks at the border inspection post  
- Issuance of veterinary entry document electronically or by using other communication tools.  
- Frequency of veterinary controls |
|---|---|
| **Veterinary checks on live animals entering the country** | EU harmonization regulation 97/794/EC  
EU harmonization regulation, 91/496//EC  
- Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- One day before arrival, importers should inform the amount, variety and expected date of arrival to veterinary border inspection  
- Veterinary controls should consists of documentary checks, as well as physical checks  
- First veterinary checks should be done at the border inspection posts  
- Turkish Government Official Veterinarians visit the exporting country and verify that animals to be exported to Turkey comply with the technical specifications determined by MinAF before export |
| **Veterinary checks on products entering the country** | EU harmonization regulation 97/78/EC  
- Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- One day before arrival, importers should inform the amount, variety and expected date of arrival to veterinary border inspection  
- Veterinary controls should consists of documentary checks and physical checks  
- First veterinary checks should be done at the border inspection posts |
| **Animal and animal products entering the country are to be subjected to veterinary controls** | EU harmonization regulation 97/78/EC  
EU harmonization regulation, 91/496//EC  
EU harmonization regulation, 2007/275//EC  
Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed |
| Technical and Hygiene Rules on Meat Import | -Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- Based on the Regulation of Veterinary checks on products entering the country  
- Technical Criteria of Imported Meat |
| Animal Welfare Regulation | -Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- Defines required criteria of animal farms including barns, cages for chickens etc. |
| Animal welfare during animal transportation | -Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- Requirements of animal transportation vehicles including ships and trucks  
- Responsibilities, training, inspections, and reports |
| Animal byproducts that are not intended for human consumption | - EU harmonization regulation 1069/2009/EC  
- Categorization of byproducts  
- Collection and transportation criteria |
| Semen, ovum and embryo production center establishments regulations | - Registration, approval, and certification of centers |
| Special hygiene regulation for animal products | - EU harmonization regulation, 853/2004//EC  
- Based on Turkish Law no. 5996 on Veterinary Services, Phytosanitary, Food, and Feed  
- Defines requirements for animal slaughtering and animal products processing facilities |
<p>| Feed hygiene | - EU harmonization regulation, 183/2005//EC |</p>

- EU harmonization regulation, 1935/2004/EC |
| Turkish food codex on composition and labeling of foodstuffs suitable for people intolerant to gluten | - EU harmonization regulation, 41/2009/EC |
| Turkish food codex on sampling and testing methods for dioxin and similar products | - EU harmonization regulation, 1881/2006/EC |
| Turkish food codex on energy drinks | - Went into effect on 6/30/2017
- Sets limits for caffeine, glucuronolactone, taurine, inositol and energy amount of product
- Requires a warning on the label stating: “Do not use this product with alcohol or by mixing with alcohol. Consumption of this product is not advised for children, people below 18 years old, elderly people, diabetics, people who have hypertension, pregnant or breastfeeding women, people who have metabolic disorder, kidney problems and those who are susceptible to caffeine. It is not a sport beverage, it shouldn’t be consumed before, during and after physical activity. It is advised not to consume more than 500 ml/day” |
| Regulation on food | - Based on the Decree Law 560 and Turkish Law 2690 of Turkish |
Some food products are regulated by MinAF via \textbf{vertical legislation}, through individual Communiqués to meet special requirements. The production, processing, storage, transportation and placing on the market, product criteria, and specific labeling requirements are set in these Communiqués, available \textbf{here} in the Turkish language.

Some \textbf{vertical Communiqués} under Turkish Codex Regulation are:

- Communiqué on Aromatized Wines
- Communiqué on Wine
- Communiqué on Beer
- Communiqué on Spirit Drinks (hard alcohol)
- Communiqué on Non-Alcoholic Beverages
- Communiqué on Fruit Juices and Similar products
- Communiqué on Coffee and Coffee Extracts
- Communiqué on Chocolate and Chocolate Products
- Communiqué on Food Supplements
- Communiqué on Fermented Milk
- Communiqué on Infant Formulas
- Communiqué on Follow-on Formulas
- Communiqué on Cereal-based Supplementary Baby Foods for Infants and Young Children
- Communiqué on Foods for Athletes (energy bars, isotonic/protein/carbohydrate drinks, etc.)
- Communiqué on Black Tea
- Communiqué on Frozen Food
- Communiqué on Gluten-Free Foods
- Communiqué on Ice cream
- Communiqué on Jams, Marmalades, and Jelly
- Communiqué on Lentils
- Communiqué on Pasta
- Communiqué on Rice
- Communiqué on Salt
- Communiqué on Sugar
- Communiqué on Vegetable Oils
- Communiqué on Olive
- Communiqué on Egg and Egg Products
- Communiqué on Meat and Meat Products
- Communiqué on Wheat Flour
- Communiqué on Honey
- Communiqué on Spices
A complete list of Communiqué is accessible at the website of MinAF [here](#) in Turkish language.

**Section VIII: Trademarks, Brand Names, and Intellectual Property Rights**

The Law on Industrial Property No. 6769 was adopted on December 22, 2016 by the Turkish Parliament and entered into force by its publication in the Official Gazette No. 29944, on January 10, 2017. This law consolidated and updated a number of existing decrees about intellectual property rights over the years into a single, enforceable piece of legislation regulating trademarks, patents, designs, utility models, geographical indications, and traditional product names in line with EU standards and Turkey’s local requirements. It encompasses applications, registrations, and post-registration processes regarding trademarks, geographical signs, design, patent, utility model and traditional product names, and legal and criminal sanctions concerning the violation of these rights.

MinAF has jurisdiction over the implementation of geographical indications, but registration of GIs is handled through the Turkish Patent and Trademark Office (Turk Patent). Post is unaware of specific instances where Turkey’s current GI regulations have damaged U.S. companies’ GI rights.

Many organizations are now applying for geographical indication (GI) protection of agricultural products in Turkey. Currently, of the 1104 protected products in a wide range of sectors, **seven foreign-origin agricultural products are protected GIs: Champagne, Prosciutto di Parma/Parma ham, Scotch Whisky, Zivania, Parmigiano Reggiano/Parmesan cheese, Grana Padano cheese, and Hellim/Halloumi cheese**, to date. There are 736 products, of which only **five are foreign-origin agricultural products** (Cognac, Douro, Gorgonzola cheese, White Korean Ginseng, Red Korean Ginseng), **that are pending registration**. Once GI applications are published in the Turkish Patent and Trademark Office Bulletin, there is a three-month period to register objections. For detailed information please see the FAS GAIN report on [Geographical Indications in Turkey](#).

**Section IX: Import Procedures**

MinAF is the competent authority responsible for import policies, legislation, and official controls and inspections of food and agricultural products related to food and product safety.

Imports of food products into Turkey are allowed only if they comply with the regulations related to import controls and the Turkish Food Codex. Turkey is harmonizing its food import regulations and the Turkish Food Codex Regulation with those of the EU. If the product in question is not covered by the Turkish Food Codex, officials can refer to international regulations such as the International Organization for Standardization (ISO), Codex Alimentarius, or relevant EU Directives. If Turkey is not harmonized to international or EU standards, importation will be conducted on a case-by-case basis.

Custom Gates for the entrance of food and agricultural products which will be subjected to import controls and inspections by MinAF are designated by the Ministry of Trade. **There are 47 custom gates designated for the import controls of animals and animal sourced products.** MinAF has established 23 Veterinary Border Inspection Posts (VBIP) which are authorized for carrying out import controls of these products. Please see names of provinces, VBIPs, and custom gates in Appendix III.
There are 48 custom gates designated for the import controls of forestry products with HS Codes 44.01, 44.03, 44.04, 44.06, 44.07, 44.15 and 44.16 which require quarantine controls (except wooden packages covering commodities). Please see the names of provinces and designated custom gates in Appendix IV for these commodities.

There are 44 custom gates designated for the import controls of propagation materials (seed, seedlings, saplings, flower bulbs) which require quarantine controls. Please see the names of provinces and designated custom gates in Appendix V for these commodities.

There are 66 custom gates designated for the import controls of products other than propagation materials which require quarantine controls. Please see the names of provinces and designated custom gates in Appendix VI for these commodities.

There are 44 custom gates designated for the import controls of plant-origin food and feed stuffs in the aspect of food and feed safety and materials which are intended for contact with food stuffs in the aspect of product safety. Please see the names of provinces and designated custom gates in Appendix VII for these commodities.

For animals and animal-sourced products which will be subjected to veterinary control, the importer should inform the VBIP, or designated custom gate in the absence of VBIP, about the arrival of the shipment at least one working day in advance for live animals and before arrival for animal products by filling and submitting the Veterinary Entrance Document (VED). The VED should be submitted electronically in advance for notice of import and transit procedures. When the commodity arrives at port/VBIP or the designated custom gate, import procedures are started.

For plant and plant products which will be subjected to plant health controls (quarantine controls), the importer should inform the Agricultural Quarantine Directorate (AQD) of MinAF via electronic “Plant Quarantine Registration and Tracking System”

- 4 hours before the arrival of commodity if it is transported via airway
- 12 hours before the arrival of commodity if it is transported via highway
- 24 hours before the arrival of commodity if it is transported via seaway

For food and feed of plant origin and articles intended to come into contact with food, the importer should notify the PAFD about the shipment details by filling the “Shipment Notification Form” through the Food Safety Information System (FSIS) and upload the Certificate and other required documents like ingredient list, label, invoice etc., related to the product between 3 to 20 days before the arrival of the commodity. PAFD evaluates these documents to decide if the commodity in question is eligible for import or not in line with the relevant legislation.

MinAF implements an exemption for the import controls of food and feed which are free of charge and not for commercial use if intended for:
• scientific purposes, for exhibition, or for sportive or cultural activities
• consular or diplomatic representatives’ own use
• a donation during a time of crisis
• sample purposes only

Amounts of food and feed for sample purposes to be exempted from import controls are as follows:

• Food and feed additive up to 5 kilograms (kg) or 5 liters (L).
• Food and feed flavor up to 0.5 kg or 0.5 L

• Bulk commodity (raw, processed, semi processed) up to 25 kg
• Prepackaged products for direct consumption up to 25 units
• Packaging materials up to 25 units
• Alcoholic beverages up to 7 bottles if volume of each bottle is 0.7 L; 5 bottles if the volume of each bottle is 1L; 3 bottles if the volume of each bottle is 1.5 L
• Foods for special dietary purposes up to 5 units or 5 bottles (should not be weighing more than 2 kg or 2 L)
• Food supplements up to 5 units/boxes/bottles (should not be weighing more than 2 kg or 2 L)

Section X: Trade Facilitation

Import procedures of plants, plant products, food and feed of plant origin, and articles intended to come into contact with food

The importer notifies the PAFD about the shipment details by filling the “Shipment Notification Form” through the “Food Safety Information System” and then uploads the certificate related to the product that will be imported between 3 to 20 days before the arrival of the commodity.

When the product arrives at port/VBIP or designated custom, import procedures are started. Depending on product type, the importer should present the approved Control Certificate (if required for that commodity) together with the original invoice, ingredient list, certificate of origin, plant health certificate or free sale certificate or health certificate, as well as other import documentation, such as the bill of lading, etc. After the identity and documentary verifications, PAFD inspectors carry out physical checks, including taking samples of food, feed of plant origin, and articles intended to come into contact with food according to the analysis frequency requirement, which is set by PAFD. If a sample is taken, it is sent to MinAF’s official laboratory or a private laboratory authorized by GDPC for physical,
chemical, and microbiological analysis. If feed or food is a bulk or semi-processed commodity which requires quarantine control, it is additionally inspected by plant quarantine inspectors for consistency with the legislation in place. Plant quarantine checks are carried out according to the Regulation on Plant Quarantine which is accessible here in the English language.

Official controls for plant, plant products, and feed and food of plant origin in bulk or semi-processed form which require quarantine controls are carried out by the inspectors of AQD. There are currently 12 AQD throughout the country. AQD inspectors carry out quarantine checks including taking samples of the product according to the analysis frequency requirement which is set by AQD. If a sample is taken, it is sent to MinAF’s official laboratory designated by GDFC for quarantine control analysis.

The import control process normally takes up to one week depending on the type of product and the analysis. Importation of the product is allowed if the results of the checks and analysis are found to be acceptable and consistent with regulations. PAFD or AQD sends a conformity letter to the custom officials to release the product in question. If the inspection results do not comply with Turkish legislation requirements, the importer may request secondary sample tests which are sent to designated national reference laboratories within seven days. The reference labs’ results are final. In the case that the secondary test results show that the product does not comply with Turkish import requirements, the shipment is rejected by PAFD or AQD. Then, the shipment may be sent back to the exporting country or a third country by the request of importer/exporter or subjected to special treatment or destructed in the custom area in the absence of previous options.

Depending on the type of product, original documents must accompany the product at the time of import controls. Although MinAF temporarily accepted electronic phytosanitary certificates/free sale certificates/health certificates during the Covid-19 pandemic, electronic copies of phytosanitary certificates are no longer accepted by MinAF, as of August 1, 2021. MinAF continues to accept electronic free sale certificates/health certificates e-mailed directly to PAFD. MinAF plans to end this implementation soon but as of June 2022, these documents continue to be accepted electronically. Exporters should be in close communication with importers in Turkey to learn about the correct official e-mail addresses to submit free sale/health certificates and whether this ‘temporary implementation’ is still in effect.

Please see detailed information about export certificates in the FAS GAIN Report entitled FAIRS Export Certificate for Turkey for 2022 which is accessible here.

Import procedures of live animals and animal products
The importer should inform VBIP, or the designated custom gate in the absence of VBIP, about the arrival of live animals at least one working day before arrival by filling out and submitting the VED electronically. For animal-sourced products, the importer should inform the VBIP/designated custom gate in advance. A web-based registration system has been developed by MinAF for the approval procedures of the ‘control document’ which are carried out by the authorized Provincial Directorates and related General Directorates of MinAF and for the import procedures and controls of animal and animal products, which are carried out by the Veterinary Border Inspection Post Directorates and the authorized Provincial Directorates.
As of September 1, 2019, all import procedures have been carried out by this web-based registration. Since the system must be used by the companies and persons who are importing animal and animal products to Turkey, the relevant importer should apply to the Veterinary Border Inspection Post Directorates and the authorized Provincial Directorates to utilize this system without an additional registration fee.

The explanatory video showing how to submit the control document and Veterinary Entrance Document in the system (https://hbs.tarbil.gov.tr/) can be seen at http://content.tarimtv.gov.tr/asset/86m75x9q/7UPn97mm.html in the Turkish language.

As of January 1, 2020, all transit procedures are carried out via the same system. All transit applications must be made by using this system with a Passport Number or Turkish Identity Card Number without any ‘password’. The explanatory video showing how to use the system can be seen at http://usd.nocvp.com/asset/893G8Gr3/7UPn97mm.html in the English language.

When the commodity arrives at the port, the importer must provide the Control Certificate, if the product requires it, and other documents (ex: Veterinary Health Certificate, the list of animals with ID numbers, test documents, invoices, etc.) to the VBIP or custom gate to obtain custom clearance. MinAF Inspectors carry out the veterinary checks (documentary, identity, and physical checks if needed). If the results comply with the relevant laws, then the products are released.

Additionally, for live animals, once documentary and identity checks are carried out at the border, the animals are sent to a quarantine area (which might be at the importer’s farm) and tests are carried out by taking samples from the animals for diseases included on the health certificate. The frequency of samples is determined by GDFC according to a risk assessment or national monitoring plans. If the test results are compliant with the legislation, then the VBIP or PAFD sends a conformity letter to the customs officials to release the product in question. The process normally takes up to one week, depending on the type of analysis needed. Analyses are carried out by official control laboratories and private laboratories which are authorized by GDFC.

For animals and animal products’ certificates, according to the Turkish import regulation, export certificates must be signed by an official veterinarian in the exporting country two days prior to shipment, but exporters should note that MinAF removed the two-day requirement for semen shipments since they are frozen. Since February 2018, MinAF now accepts export certificates from the United States that are endorsed within the validity period, which is 30 days. For more information, please see the FAS GAIN Report entitled Turkey Revises Livestock Genetics Import Process Harmonizes Certificate with the EU, dated October 7, 2019 which is accessible here.

Electronic Veterinary Health Certificates are not accepted by MinAF and the original copy of the Certificate must accompany the commodity at the time of import. As of August 1, 2021, MinAF has ended the temporary implementation of electronic veterinary health certificates that was in place during the acute Covid-19 period. Please see more detailed information about export certificates in the FAS GAIN Report entitled FAIRS Export Certificate for Turkey for 2022 which is accessible here.

APPENDIX I: HS Codes of commodities which require a Control Certificate

A-HS Codes of animal and animal sourced products
The Control Certificate is valid for 4 (four) months for the commodities above. However, for those HS codes 0504.00, 15.04, 1516.10, 15.17, 1518.00, 18.06, 19.01, 19.02, 19.04, 19.05, 2103.90.90, 21.04, 2105.00, 21.06, 2202.99, 2208.70, the control certificate is valid for 12 (twelve) months.

### B-HS Codes of seeds, seedlings, saplings, and flower bulbs

APPENDIX IX: Other Import Specialist Technical Contacts
U.S. exporters are advised to contact the FAS offices in Ankara or Istanbul for additional information and/or a list of private sector firms which can provide assistance with customs clearance and import regulation issues. In most cases, the importing company or agent should be familiar with (and ultimately responsible for) existing regulations.
