# Report Name: Fresh Deciduous Fruit Semi-annual 

Country: Chile
Post: Santiago
Report Category: Fresh Deciduous Fruit

Prepared By: Sergio Gonzalez
Approved By: Bret Tate

## Report Highlights:

In marketing year (MY) 2022/23, FAS Santiago estimates that table grape production will decrease by 8.6 percent reaching 720,000 metric tons and that exports will decrease by 8.7 percent, totaling 555,000 metric tons. For MY 2022/23, FAS Santiago estimates apple production at $1,000,000$ MT, a 2.9 percent decrease from MY 2021/22 on lower planted area. Apple exports will reach 583,000 MT, a 3.2 percent decrease from MY 2021/22. Considering the declining trend in pear planted area, FAS Santiago estimates Chile's MY 2022/23 fresh pear production to decrease by 4.8 percent and total 210,000 MT, with exports decreasing by 4.9 percent and totaling 110,000 metric tons.

## Production:

In MY 2022/23, FAS Santiago (Post) estimates an 8.6 percent decrease in table grape production, totaling 720,000 metric tons. The decrease in production is caused by a decrease in table grape area planted and by adverse climatic conditions in the central part of the country which lowered yields (Figure 1). Table grape area planted is on a decreasing trend due to low profits and competition from Peruvian fruit in export markets. Area planted decreased from 53,851 hectares in MY 2011/12 to 43,025 hectares in MY 2022/23.

Data from ODEPA shows a decrease in area planted from all table grape production regions (Table 2). Competition from Peru in the U.S. market, high production costs (labor, transport, and chemical products), and the need to update table grape varieties has put downward pressure table grape exporters. Decreases in area planted are especially significant in the Atacama region which has few alternatives to table grape production. In the Coquimbo and Valparaíso regions, reduction in table grape area planted is offset by an increase in citrus area planted.

Table grape area planted in the Metropolitana and O'Higgins region decreased by 14.1 percent and 52 percent, respectively, over the last three marketing years. In these regions, area planted with table grapes was replaced by more profitable crops such as walnuts, cherries, and citrus, or by expansion of the urban area.

## Consumption:

Post estimates that in MY 2022/23 fresh domestic consumption of table grapes will reach 170,500 metric tons or 23.6 percent of commercial production. This level of consumption represents an 8.2 percent decrease in fresh domestic consumption over MY 2021/22 and is explained by the decrease in fresh table grape production and subsequent higher prices.

## Trade:

In MY 2022/23, due to the decrease in table grape production, Post estimates export volume to decrease by 8.7 percent, totaling 555,000 metric tons. In MY 2022/23, data until March, shows that table grape exports increased by 14.2 percent over MY 2021/22. However, MY 2021/22 was characterized by general problems in logistics and delays at ports which caused export to peak in April (Figure 2). Typically, Chilean table grape exports peak in March. Post expects export volume to decrease in April and May of MY 2022/23 as compared to the same months in MY 2021/22.

In MY 2021/22, year-over-year table grape exports increased by 15.7 percent in volume, totaling 608,200 MT (Table 3). The United States is the main market for Chilean table grape exports accounting for 310,033 MT in MY 2021/22, which represents 51 percent of Chilean table grape exports. In MY 2022/23, data until March, shows table grape exports to the United States increased by 7.4 percent reaching 193,409 metric tons (Table 3).

China is the second largest market for Chilean table grapes accounting for 77,627 MT in MY 2021/22, which represented 12.8 percent of total Chilean grape exports. In MY 2022/23 (data until March), Chilean exports to China increased by 32.3 percent, totaling 23,582 metric tons.

## Policy:

Chile seeks a systems approach to improve market access to the United States for three Chilean growing regions: Atacama, Coquimbo, and Valparaiso. A systems approach would benefit the three Chilean regions by avoiding the use of methyl bromide fumigation to mitigate against European grapevine moth. Fumigation decreases the quality and shelf life of the fruit, which results in lower prices from retailers. Further, fumigated product is ineligible to be certified USDA organic.

USDA's Animal and Plant Health Inspection Service published a proposed rule on the Federal Register on Monday, October 17, 2022. The comment period ended on January 17, 2023. Currently, Chilean authorities and exporters are awaiting the publication of the final rule.

## Production:

Post estimates MY 2022/23 apple production at $1,000,000$ MT, a 2.9 percent decrease from MY 2021/22 (Table 4). In MY 2022/23, apple area planted decreased by 6.2 percent totaling 29,035 hectares. Production decrease is lower than area planted decrease because it is offset by higher yields due to favorable climatic conditions in MY 2022/23. A rainy winter, high number of chill hours, and mild temperatures in the spring favored apple yields.

According to the latest data from ODEPA area planted decreased in all apple-producing regions from Chile (Table 5). Apple area planted decrease is explained by the high competition and low profits that this commodity is facing in export markets. The Maule and O'Higgins regions in the central-south part of the country hold 62.4 percent and 22.0 percent of the area planted, respectively, making up for 84.4 percent of the total area planted. However, area planted decreased in both regions since many producers have orchards with old varieties that are not profitable in comparison to modern varieties or other crops such as cherries and walnuts.

Note: Variation of planted area is measured every three years; data provided are last available
Source: ODEPA, 2023

## Consumption:

For MY 2022/23, Post estimates domestic consumption of apples (including fresh and processed) will total 430,000 MT, which represents 43 percent of the total commercial apple production. Domestic consumption of apples will decrease by 2.4 percent from MY 2021/22 following the production decrease. Consumption is pushed down by the high levels of inflation in Chile, which have caused a decrease in consumption volume. Industry sources note that higher prices caused Chilean consumers to purchase smaller apples, minimizing consumer outlays but also decreasing overall volumes.

## Policy:

No new policy developments to report.

## Trade:

For MY 2022/23, Post estimates Chilean apple exports to total 583,000 MT, a 3.2 percent decrease from MY 2021/22. Higher yields in MY 2022/23 should offset some of the reduction in area planted and thus export volume will decrease in a lower magnitude than area planted.

In MY 2021/22, Chilean apple exports totaled 602,581 MT, a 6.4 percent decrease from MY 2021/22. In MY 2021/22, the main difficulty for Chilean apple exporters was the increase of freight costs, which caused exporters to operate at a loss. In MY 2022/23, freight costs decreased, and exporters are likely to increase exports due to lower costs.

Colombia is the top market for Chilean apples. In MY 2021/22, Chile exported 62,044 MT of apples to Colombia, which represented 14.3 percent of Chilean apple exports (Table 6). Brazil is the second top market for Chilean apples. In MY 2021/22, exports to Brazil increased by 412 percent due to the lower cost of shipping by land compared to by sea. In MY 2021/22, apple exporters were facing high freight costs to ship to the United States. However, in MY 2022/23 Chilean apple exports to the United States increased by 6.9 percent, which is explained by the normalization of freight costs.

## Source: Post estimates

## Production:

In MY 2022/23, pear area planted decreased by 4.7 percent totaling 5,878 hectares (Figure 5). Pear area planted is on a downward trend since MY 2016/17 due to low margins and difficulties exporting. One of the main challenges for pear exports, is diversifying markets for specific varieties, like Abate Fetel, which Italy demands and are not well-known in other places. Considering the declining trend in planted area, Post estimates Chile's MY 2022/23 fresh pear production to decrease by 4.8 percent and total 210,000 metric tons.

According to data from ODEPA, pear area planted in the O'Higgins and Maule regions, the top pear producing regions in Chile, decreased by 17.5 and 26.6 percent, respectively, in the past three marketing years (Table 8). Post expects this decreasing trend to continue.

## Consumption:

In MY 2022/23, Post estimates domestic consumption of pears to decrease by 4.6 percent and total $102,700 \mathrm{MT}$ following the decrease in production. Consumption includes fresh domestic consumption and for further processing and represents 48.9 percent of total pear production.

## Policy

No new policy developments to report.

## Trade:

In MY 2022/23, Post estimates pear exports to decrease by 4.9 percent and total 110,000 MT due to the lower production volume. In MY 2021/22, pear exports decreased by 8.6 percent, totaling 115,659 metric tons (Table 9).

Chile's top markets for fresh pear exports are Colombia, the Netherlands, and Italy. In MY 2021/22, due to high freight costs, pear exporters allocated more of their exports to Latin America. In MY 2022/23, Chilean pear exports to Italy increased by 82.7 percent, exports to Spain increased by 64.9 percent, and exports the United States increased 15.8 percent.

Table 9: Pear Export Volume to the World (MT)

| Partner Country | Marketing Year |  |  | January-March |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \text { MY } \\ 2020 / 21 \end{gathered}$ | $\begin{gathered} \text { MY } \\ 2021 / 22 \end{gathered}$ | Variation (\%) | Jan 22- Mar | $\begin{gathered} \text { Jan 23- Mar } \\ 23 \end{gathered}$ | Variation (\%) |
| The World | 126,511 | 115,659 | -8.6\% | 32,404 | 41,391 | 27.7\% |
| Colombia | 16,687 | 18,964 | 13.6\% | 5,069 | 5,595 | 10.4\% |
| Netherlands | 12,650 | 15,102 | 19.4\% | 4,460 | 2,658 | -40.4\% |
| Italy | 18,649 | 12,924 | -30.7\% | 4,692 | 8,571 | 82.7\% |
| Ecuador | 11,847 | 11,348 | -4.2\% | 2,757 | 2,938 | 6.6\% |
| Russia | 13,531 | 8,659 | -36.0\% | 1,458 | 1,793 | 23.0\% |
| United States | 8,560 | 7,356 | -14.1\% | 3,194 | 3,700 | 15.8\% |
| Peru | 8,260 | 7,348 | -11.0\% | 1,534 | 1,232 | -19.7\% |
| Spain | 7,643 | 4,540 | -40.6\% | 3,109 | 5,126 | 64.9\% |
| Germany | 3,839 | 4,182 | 8.9\% | 669 | 336 | -49.8\% |
| China | 2,497 | 3,765 | 50.8\% | 233 | 1,721 | 638.6\% |
| Brazil | 1,994 | 2,913 | 46.1\% | 401 | 767 | 91.3\% |
| Panama | 1,799 | 2,024 | 12.5\% | 453 | 596 | 31.6\% |
| Saudi Arabia | 2,436 | 1,816 | -25.5\% | 937 | 991 | 5.8\% |
| Taiwan | 346 | 1,624 | 369.4\% | 42 | 341 | 711.9\% |
| Guatemala | 1,335 | 1,491 | 11.7\% | 282 | 454 | 61.0\% |
| Others | 14,438 | 11,603 | -19.6\% | 3,114 | 4,572 | 46.8\% |
