## Japan

### Grain and Feed Update

#### Grain and Feed Update - January 2013

##### **Approved By:**

Elizabeth Autry

##### **Prepared By:**

Hisao Fukuda

##### **Report Highlights:**

Due to an increase in ingredient costs, primarily corn, the price of feed soared in the third quarter of Japan's Fiscal Year 2012 (October-December 2012). However, thanks to the subsidies that fully absorbed this hike, Japan's feed consumption and production remain stable. Post updated PS&Ds for rice and barley, as the Ministry of Agriculture, Forestry and Fisheries (MAFF) announced Japan's 2012 production statistics for these commodities.

**Post:**  
Tokyo

## **Overall Market Situation**

Up-to-date feed production statistics and a detailed breakdown of feed ingredient utilization ratios follow. The trend away from corn to wheat continues.

**Table 1.**  
***Feed Utilization by Ingredients***

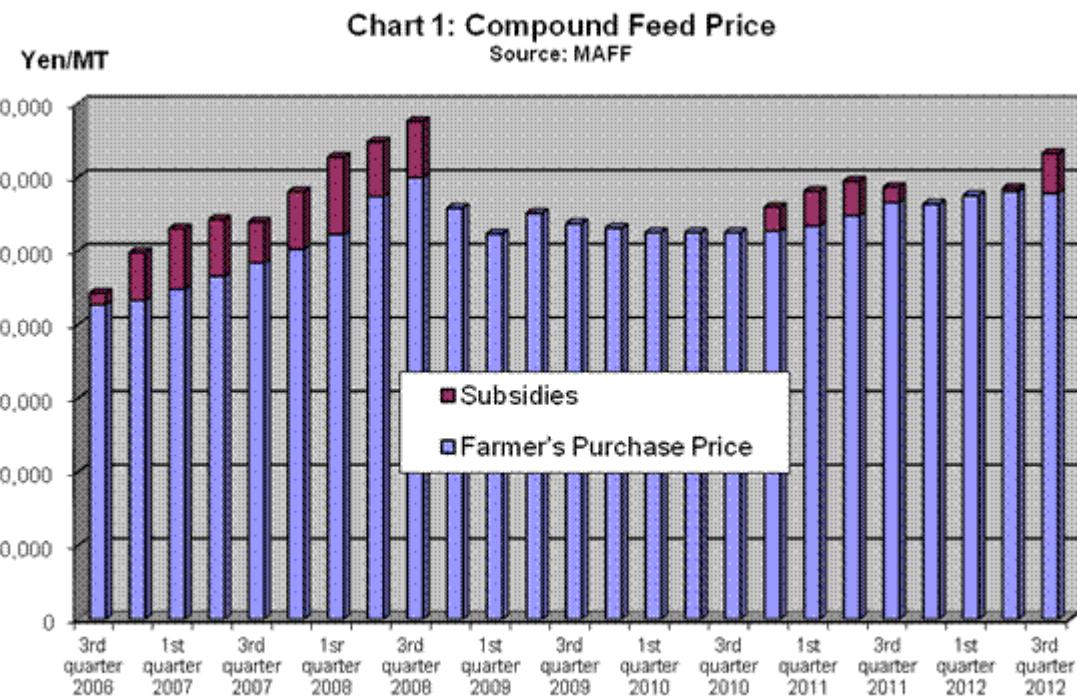

Unit: MT

Source: Feed Supply Stabilization Organization

Japan has a feed stabilization program, where the combination of a subsidy by the Ministry of Agriculture, Forestry and Fisheries (MAFF) and an industry fund helps absorb sudden surges in the compound feed price. It is activated when the import costs of ingredients in a particular quarter exceed the average import costs of ingredients in the previous one year. As the graph below shows, during the most recent quarter (October-December 2012), compound feed prices increased by 4,750 yen per metric ton, from 58,500 yen to 63,250 yen. The subsidy entirely absorbed this increase.

## Rice Updates

In early December, MAFF announced statistics for 2012 rice production. Overall production volume increased 1.4 percent over the previous year as a result of a slight increase in planted area and a

favorable yield due to an absence of inclement weather conditions throughout the growing season.

**Table 2.**  
**Japan's Rice Production (Brown Basis)**

	Planted Area (1,000 hectares)			Production (1,000 metric tons)			Yield/10 ares (kilograms)	
	Total	Paddy	Upland	Total	Paddy	Upland	Paddy	Upland

### Barley Updates

In late November, MAFF announced statistics for 2012 barley production. Both the planted area and the production volume remained near the previous year's level. Barley grown domestically is used for non-feed purposes such as beer, barley tea, *shochu* (distilled liquor), and *miso* (soybean paste).

**Table 3.**  
*Crop Area and Production of Barley in Japan*
