

**Required Report:** Required - Public Distribution

**Date:** March 04, 2022 **Report Number:** IN2022-0018

# **Report Name:** Oilseeds and Products Update

Country: India

**Post:** New Delhi

**Report Category:** Oilseeds and Products

**Prepared By:** Ankit Chandra

Approved By: Mark Rosmann

# **Report Highlights:**

India's rapeseed and mustard production estimate for marketing year 2021/2022 (October-September) is revised upward to 10.8 million metric tons on account of significantly higher acreage at almost 9.2 million hectares, high domestic prices, and a good monsoon performance. Exports of rapeseed meal sank 66 percent between October 2021 through January 2022 due to lower crushing availability. Recently announced duty changes in palm oils will encourage domestic refineries to import crude palm oil and other edible oils as opposed to refined palm oil.

# **GENERAL INFORMATION**

**Rapeseed-Mustard Sowing Update:** On February 4, 2022, India's Ministry of Agriculture and Farmers Welfare (MOAFW) published its official *rabi<sup>1</sup>* planting update. Area under Rapeseed-Mustard (RM) witnessed a sharp 25 percent rise over last year owing to high market prices and good residual soil moisture left by an extended southwest monsoon.<sup>2</sup> A strong northeast monsoon (October through December) further encouraged RM-crop planting across the country but particularly in Gujarat and Madhya Pradesh (Table 1).

India's experienced continued plentiful rainfall in January 2022, with excess precipitation reported across key RM crop growing regions in northwest and central India. This has led to minor crop damage in some areas in Rajasthan, Madhya Pradesh, and Haryana. The damage appears to be limited with expected overall higher yields and a good crop condition. The MOAFW reservoir storage bulletin as on February 11, 2022, indicates live storage (gross volume water storage) available in its reservoirs at 175.96 billion cubic meters and 68 percent of total live storage capacity.

| Area Planted as of | February 4 | , 2022  |             |          |

# POLICY

# **Revised Edible Oil Import Duties**

On February 14, 2022, the Indian government's Ministry of Consumer Affairs, Food and Public Distribution reduced its agriculture cess<sup>3</sup> on Crude Palm Oil (CPO) from 7.5 percent to 5 percent (Table 2). The move aims to limit Indian imports of refined palm oil and encourage domestic refineries to instead import CPO for refining. Additionally, the Indian government plan hopes to check inflation across its edible

<sup>&</sup>lt;sup>1</sup>*Rabi* crops are sown in winter and harvested in the spring in India.

 $<sup>^{2}</sup>$  The southwest monsoon withdrew from India on October 25, 2021, while the northeast monsoon was established on the same date.

<sup>&</sup>lt;sup>3</sup> The Agriculture and Infrastructure Development Cess is a kind of special-purpose tax which is levied over and above basic tax rates and to raise funds to finance spending on developing agriculture infrastructure.

oil basket and provide relief to consumers. The duty changes became effective on February 12, 2022 (Source: Indian Government Press Information Bureau).

#### **Stock Limits**

On February 3, 2022, the Department of Food and Public Distribution issued the "Removal of Licensing Requirements, Stock Limits and Movement Restrictions on Specified Foodstuffs (Amendment) Order, 2022," where stock limits were placed on all edible oils and oilseeds (Table 3) (Source: <u>Business</u> <u>Standard</u>). However, six states, including Uttar Pradesh, Karnataka, Himachal Pradesh, Telangana, Rajasthan, and Bihar are exempt as they have already imposed their own stock limits. Other exemptions have also been provided to trading entities that meet certain procurement criteria.

Rajasthan, India's largest producing state of the RM crop, imposed its own stock limits on November 26, 2021, and these are valid through March 31, 2022. However, the move is reported to have limited impact as most of the stockists own multiple entities and can circumvent import requirements, in addition to the short validity period.

**Table 3. India: Government Stock Limit Requirements**

# **Ban on Futures Trade**

On October 8, 2021, the Securities and Exchange Board of India (SEBI), the regulatory body for commodity and stock markets, banned new futures and options contracts for the RM crop and its derivatives, and market participants were only given the option to trade their existing positions. While the SEBI did not cite any rationale behind the move, industry sources point to India's surging inflation (both

retail and wholesale price index) as the reason behind the move. Furthermore, on December 20, 2021, the SEBI extended the ban on soybean and its derivatives, CPO, paddy rice (non-basmati), wheat, chickpeas, and mung bean (green gram) (Source: <u>SEBI</u>).

# Rabi Oilseed Crop Minimum Support Price

On September 8, 2021, the Indian government announced its Minimum Support Price (MSP) for *rabi* crops for the current season. For oilseeds, the Indian government increased the MSP for rapeseed-mustard by nine percent to USD<sup>4</sup> 673 per metric ton (MT) (Indian Rupee [INR] 50,500/MT) from the previous season price of \$619.5/MT (INR 46,500/MT) (Source: <u>MOAFW</u>).

<sup>&</sup>lt;sup>4</sup> For purposes of this report, 1 USD = Indian rupee 75.06.

# PRODUCTION

**Market Year 2021/2022 Rapeseed-Mustard Production Revised Upwards:** Indian rapeseed and mustard crop production for marketing year (MY) 2021/22 (October-September) is revised upwards to 10.8 million metric tons (MMT) on a record 9.2 million hectares, based on industry reporting higher acreage and yield estimates from plentiful monsoon precipitation. Key RM-crop growing states of Rajasthan, Uttar Pradesh and Madhya Pradesh have reported increased planting area over last year by 38, 15, and 50 percent respectively (Table 1). Popular RM crop varieties include brown and yellow *sarson, raya,* and *toria,* while *gobhi sarson* is the emerging variety in North India.

# PRICES

The higher MSP announcement by the Indian government encouraged initial plantings, however, bullish domestic prices have encouraged farmers to sow greater RM-crop acreage this year—a trend that is likely to continue next season. Domestic RM-crop prices reached \$116.50 per quintal<sup>5</sup> (INR 8,750/quintal) the first week of February 2022, the highest to date. The arrival of newer crop in the market (expected at the end of February) will likely lead to price corrections within the \$100-\$104/quintal (INR 7,500-7,850/quintal) range. According to industry sources, prices are expected to remain firm (Figure 1), despite higher production, which is attributable to stable domestic demand and the Indian government's decision to ban blending of mustard oil with other edible oils. (See: <u>GAIN IN2020-0173</u>)

#### Table 5. India: Meal, Rapeseed, Production, Supply and Distribution

Data source: OAA New Delhi historical data series. Post forecast for 2021/22, while 2020/21 and 2019/20 are FAS estimates.

# TRADE

Indian rapeseed meal exports plummeted 66 percent October 2021 to January 2022. In December 2021, exports shrank by almost 91 percent compared to December 2020 (Table 6). This drastic reduction occurred as India's 2020/21 rapeseed crop supply was crushed mostly during the early months of the season, thereby affecting availability for late-year exports. New crop crushing should ensue by the end of February 2022 onward. South Korea, Vietnam, Thailand, Bangladesh, and Taiwan were the top importers of Indian rapeseed meal during the 2020/21 market year.

#### Table 6. India: Oil Meal Exports (Metric Tons)

Data source: SEA.

**Other Oilseed Meals Impacting Trade:** India's soybean meal exports drastically fell by 82 percent between October 2021 and January 2022, as Indian soymeal continues to remain outpriced globally. The January 2022 average price for Indian soybean meal (ex-Kandla) was quoted at \$750/MT, as compared to Argentina (\$460/MT) in the same period. India's soymeal exports will likely remain lower for the upcoming quarter due to higher price parity and tight crushing margins. Consequently, tighter market arrivals for soybeans as farmers are holding on to the crop harvested in late 2021 have led to lower crushing, encouraging greater soybean oil imports.

The Soybean Processors Association of India, an Indian-based soybean advocacy group, has urged the Indian government to provide inland transport subsidies to support domestic exporters of soybean products to remain competitive in the global market (See: <u>Times of India</u>; January 20, 2022).

#### TRADE

Malaysia and Indonesia continue as the top palm oil suppliers between October 2021 to December 2021. During this period, India also imported crude degummed soybean oil from Argentina, and Brazil, while Ukraine and Russia exported crude sunflower oil to India (Table 8). Between October 2021 to December 2021, India imported a small volume (32,238 MT) of rapeseed oil (colza) and Mustard Oil (HS Code: 1514). India's exports of rapeseed oil are negligible.
