Report Name: Retail Foods

Country: France

Post: Paris

Report Category: Retail Foods

Prepared By: Laurent J Journo

Approved By: Kathryn Snipes

Report Highlights:

During the Covid-19 pandemic the French government designated the retail sector as essential and most firms had a continuity in operations. The nationwide lockdown and closing of restaurants resulted in a boost to the retail sector. Ordering on-line and picking-up at the store (also known as Click and Collect or E-drive) sales rose 40 percent in 2020 and represented 7.8 percent of all retail food sales. The French retail distribution network is diverse and sophisticated and offers a variety of opportunities for U.S. food and food products provided they conform to EU regulations.
Market Fact Sheet: France

EXECUTIVE SUMMARY

France is the world’s seventh largest industrialized economy and the EU’s second largest economy after Germany. It has substantial agricultural resources and maintains a strong manufacturing sector. France’s dynamic services sector accounts for an increasing share of economic activity and has been responsible for most job creation in recent years. France is a member of the G-8 and G-20, the European Union, the World Trade Organization, and the OECD.

IMPORTS OF FOOD AND AGRICULTURAL PRODUCTS
Primary imports from outside the EU were oilseeds, fruits, and distilled alcohol from the United States and China. Imports from the EU were primarily dairy, meat, and vegetables. In 2020, the trade balance for France’s agricultural and food products reached $14.4 billion. France’s imports from the U.S. in 2020 were valued at $1.3 billion, led in the retail sector by tree nuts, alcoholic beverages and seafood.

IMPORTS OF CONSUMER-ORIENTED PRODUCTS

FOOD PROCESSING INDUSTRY
The sector has about 17,700 food processing companies with sales of $215 billion. The value of processed food imports increased 0.1 percent in 2020 compared to 2019, and the exports decreased by 4.5 percent during same period. However, exports in the food industry sector remain ahead of other leading industrial sectors, placing France’s food industry among the top three in the world. Its food processing sector represented around 1.6 percent of France’s gross domestic product (GDP).

FOOD RETAIL INDUSTRY
In 2020, sales of hyper-supermarket and discounters represented 75 percent of the country’s retail food market. Different types of retailers have experienced growth and success over the previous year. E-commerce food sales increased over 40 percent from 2019, and represented 7.8 percent of total retail food sales. The largest French retailers continued investing in smaller stores in city centers. Overall retail food sales in France were estimated at $394 billion, including specialized food stores such as frozen food stores, organics and open-air-markets with sales estimated at $35 billion.

Strengths
Weaknesses

Opportunities Challenges
COVID-19
There was a significant economic contraction across sectors due to the Covid-19 pandemic. The 8.3 percent contraction in GDP in 2020 from 2019 made it the worst recession since World War II. French Ministry of the Economy reports government debt at about 11 percent of GDP for 2020. The World Trade Organization forecasts a decline in world trade of 9.2 percent by volume for 2020, with a recovery of 7.2 percent by volume in 2021 (although this growth rate is subject to high degree of uncertainty). President Macron faces a challenging situation as he begins his campaign for re-election in early 2022. The pandemic sidelined his major economic and structural reforms.

Retail food was considered an essential industry by the government and most firms continued to operate but with slightly lower capacity because of limitations on labor and new distancing precautions. Prior to the pandemic super and hypermarket growth was declining, nationwide lockdown and closing of restaurants resulted in an increase retail food sector sales. Ordering on-line picking-up at the store, also known as Click and Collect or E-drive, sales rose 40 percent in 2020 and represented 7.8 percent of retail food sales.

Trucking increased costs for the industry as there were fewer drivers and foreign drivers departed the country. Cost increases of agricultural raw materials, cleaning and protection equipment for employees due to health crisis also impacted the sector, especially the small to medium-sized food-businesses. Many importers have noted that they have slowed or stopped their purchases from outside the EU (including the United States) while they assess future demand.

Food nationalism is growing since the crisis began with messages of Buy French popular among government officials and the media. French President Macron’s recent speeches have highlighted the need for food sovereignty at the French and EU level. However, France relies on exports of agricultural products and enjoys a large surplus in their trade balance with exports such as wine and wheat where it is the leading EU exporter. Therefore, France will have a difficult time limiting imports while continuing to promote their exports.

Market Summary
France’s retail distribution network is diverse and sophisticated. The food retail sector is generally comprised of six types of establishments: 1) hypermarkets, 2) supermarkets, 3) hard discounters, 4) convenience stores, 5) gourmet centers in department stores, and 6) traditional outlets including neighborhood stores - bakeries and butcheries, 7) gas marts, as well as open-air markets and internet sales. In 2020, sales within the first four categories represented 75 percent of the country’s retail food market. Different types of retailers have experienced growth and success in 2020, mainly boosted by the e-drive as a result of Covid crisis and the expansion of the organic food sector in retail outlets. Over the last ten years, the largest French retailers invested in smaller stores in city centers.

In 2020, food expenditures represented about 20 percent of the overall budget, compared to 35 percent in 1960. The household food basket is now primarily composed of processed and ready-to-eat foods while the demand for meat, fruits and vegetables, bread and alcoholic beverages has decreased. The increase of household purchasing power, fluctuation in food prices, and changing lifestyles have contributed to the changes in food habits. In 2020, the overall retail food sales in France were estimated to $387 billion. Hyper/supermarkets and hard discounters sell about $242 billion; neighborhood stores,
including traditional grocers, $113 billion; and specialized food stores such as frozen food stores, organics and open-air markets, $32 billion.

Generally, hyper/supermarkets remain the most popular stores, but specialized food stores, frozen food stores, and hard discounters have increased their retail sector market share in recent years. Other trends of note are that French consumers are diversifying their purchases through several stores, for example buying some products locally and others from discount stores that may be farther from their residence. In addition, consumers are more price sensitive and demanding of high-quality products. Since several years, the large retailers’ emerging “drive-thru” service was on the rise, but this year with the sanitary crisis and the nationwide lockdown this service represented about eight percent of total retailer’s food sales at the end of February 2021, or a volume increase of about 40 percent compared to 2019. In addition, large retailers are expanding their private labels offered, as well as continue investing in smaller stores.

**Key market drivers and consumption trends**

- More time spent working and the rising number of single households are driving the demand for convenient ready-to-eat meals, desserts, and baking mixes.
- The growing population and increased health consciousness of consumers is fueling the demand for health and wellness products, as well as functional food products.
- Fair trade and organic products are becoming increasingly popular. France is second largest organic market in Europe.
- Ethnic foods, health and super foods, and *free from* products (e.g., gluten or lactose free), and locally grown are further trends that are attracting more and more French consumers.
- Increasing share of consumers who view their purchasing decision as a political or life-style statements such as no GMOs, free-range eggs, and vegetarian or vegan diet foods.
- Consumers increasingly require traceability and information about production methods.

**Table 1: Advantages and Challenges**

<table>
<thead>
<tr>
<th>Advantages</th>
<th>Challenges</th>
</tr>
</thead>
<tbody>
<tr>
<td>A significant portion of French households can afford imported food products.</td>
<td>Lack of brand and variety awareness of U.S. food products by consumers.</td>
</tr>
<tr>
<td>The French food retail industry is looking for new imported food products.</td>
<td>Although of interest, introducing new-to-market brands and products is not easy.</td>
</tr>
<tr>
<td>American food and food products are increasingly popular in France.</td>
<td>Complying with European and French regulations.</td>
</tr>
<tr>
<td>Efficient domestic distribution systems.</td>
<td>Domestic and intra-EU imports dominate the supply chain.</td>
</tr>
<tr>
<td>French consumers demand quality, innovative, healthy products.</td>
<td>Adapting products to French consumers’ tastes and expectations.</td>
</tr>
<tr>
<td>Changing lifestyles, demographic changes and the economic crisis fuel growth in the retail sector.</td>
<td>Adapting U.S. products to French consumer needs regarding price, practicality, variety, quality and packaging.</td>
</tr>
</tbody>

II. Road Map for Market Entry

U.S. exporters can gain market entry to the retail service sectors in several ways including representation by an importer, having their products placed in a central purchasing office catalog and by selling to cash and carry outlets. Food buyers use central buying offices, importers and cash and carry dealers to procure their products.

The most common method of market entry is by using an experienced importer to place your product in the French market. The importer will verify that your product meets EU import requirements, such as labeling and ingredient regulations and will verify your financial reliability. If interested, the importer will engage in price negotiations. Both supplier and importer need to discuss logistical requirements and the length of the contract. FAS Paris maintains a list of importers, please email agparis@usda.gov and designate your company, state of production and sector of interest for more information.

Importers often place your product with retail stores and with central purchasing offices. In France, it is common for large retailers to participate in a central purchasing office to share the costs of purchase and distributors. The central purchasing office buys products directly as well as from importers and distributors and provides them to the retail outlets.

In order to present a product to a central buying office, a U.S. supplier should:

- Submit product description and price quotations;
- Submit products for laboratory testing;
- Determine sanitary/health certification and other import documents requirements.

Labels should be in French with the following information:

- Product definition;
- Shelf life: indicated “used by” and “best before” dates and other storage requirements;
- Precautionary information or usage instructions, if applicable;
- Statement of contents: ingredients, weights, volumes, etc., in metric units. All additives, preservatives and color agents must be noted on the label with a specific group name or “E” number;
- Country of origin and name of importer or vendor within the EU;
- Manufacturer’s lot or batch number.

### Table 2: Major Food Related Trade Shows in France

</tr>
</tbody>
</table>
U.S. suppliers may also contact the following organizations for additional support:

**State Regional Trade Groups (SRTG)** are non-profit trade development organizations that help U.S. food producers and processors to enter overseas markets. They are funded by USDA/FAS and the private industry. They carry out promotional activities to increase exports of U.S. high-value food and agricultural products. For more information, contact the state regional trade group responsible for your state: [https://www.fas.usda.gov/state-regional-trade-groups](https://www.fas.usda.gov/state-regional-trade-groups)

The **U.S. Agricultural Export Development Council** is composed of U.S. commodity trade associations and other organizations, in addition to the SRTGs, with an interest in promoting U.S. agricultural exports. For an overview and additional information on the various Commodity Groups, you can go to [www.usaedc.org](http://www.usaedc.org). The **Commodity Cooperator Groups** regularly organize (reverse) trade missions, often organized around trade shows or other events. They also are excellent platforms for U.S. suppliers of food ingredients to meet with foreign buyers.

**Major Retailers:**

1. **Carrefour:** After having been the world second largest retailer after Walmart, and the largest in Europe for several years, since 2016 the French group now ranks seventh. Created in 1959 in southeast France, Carrefour grew rapidly into international markets with stores in 30 countries (Europe, Asia, South America, and North Africa). Worldwide sales in 2020 amounted to $91 billion. Carrefour has supermarkets, convenience and city center stores, all under the name of Carrefour (Carrefour Market, Carrefour Express, Carrefour City, etc.) depending on their location.

2. **E. Leclerc:** Since 2016, the company has remained the top retailer in France. Most of its stores are hypermarkets. Leclerc is present in Europe and sources food products through its central buying office.

3. **Intermarché:** This is a group of independents retailers with stores in Europe and foreign countries: Canada, South Africa, Switzerland, Australia and China. Most of Intermarché’s outlets are supermarkets; there are a few city center stores and only 94 hypermarkets.

4. **Groupe Auchan:** This is a family company owned by the Mulliez family and the Schiever Group. Auchan is present in 12 countries.

5. **Systeme U:** This is the fourth largest retailer in France in terms of sales and the sixth largest retailer in terms of stores. U brand private label expansion is a priority for the products such as wine, fruit juices, frozen ready-to-eat foods, ethnic foods and seafood. Note that Systeme U is a good client for Alaska sustainable seafood.

6. **Casino Group:** is present in France, and in South America. Casino has Monoprix, Franprix, Petit Casino, Casino Shop, Vival, Spar, and Chez Jean. Casino’s hard discounters Leader Price
representing about 20 percent of the total hard discounters in France, are in the process of being sold to the German hard discount Aldi.

7. **Cora**: The retailer is part of the Belgium group Louis Delhaize and has hypermarket/supermarket stores in France and Europe. Cora buys products through Provera their Central Buying Office that sources food products from importers.

8. **Grand Frais**: this is a network of 244 small to medium stores. Created in the 1990s to offer consumers the best quality at moderate prices for fruits and vegetables, fish, world food groceries, butcher-delicatessen and dairy products, Grand Frais’ total sales in 2020 were estimated over $3 million. Grand Frais works directly with importers.

9. **Costco**: In June 2017, the U.S. retailer inaugurated the first warehouse club in France, in Paris’ suburb; a membership-fee discount concept was new to France. Given the success of this first French store that opened near Paris, the American brand has said it plans expansion in France, and a second store is to be opened West of Paris mid-November 2021.

**Convenience Stores:**
They fall under the category of small supermarkets (superettes), are generally located in small cities, and frequently opened every day (including Sunday). Within ten years, proxy/convenience stores increased by 40 percent, and in 2020, there were approximately 8,500 outlets affiliated with large retailers such as Carrefour, Casino and Intermarché. Their number is expected to continue rising in coming years with more new concept stores.

**Other Type of Retailers:**
The number of smaller and independent stores has slightly increased since 2002. Most of them are specialized food outlets (bakeries, butchers and fish shops, groceries), and they are located both in urban and rural areas. While neighborhood stores in rural areas tended to decrease in number, they have increased in urban areas. The French National Economic Statistics (INSEE) most recent census indicated 78,000 stores. Their sales represent about 20 percent of the French food sales and their products are sourced from wholesalers and wholesale markets. Customers of neighborhood stores are generally medium to high-class consumers.

Traditional grocers include gourmet stores, such as Fauchon, Hediard, La Grande Epicerie, and Galerie Gourmande, which carry a wide range of imported products. They are located in large and medium-sized cities and attract high-income consumers. The approximately 200 outlets in France offer U.S. exporters easier market entry for products; their drawback is a tendency to purchase smaller quantities and they work directly with importers.

- Picard Surgeles is the leading frozen food retailer in France for home consumption, with a 30 percent market share, 1100 outlets throughout France and sales in 2019 valued at $1.7 billion. Picard sells high-end frozen products and offers opportunities for U.S. suppliers of fish and seafood, frozen fruits and vegetables, fruit juices, and prepared specialty meals for their private label. Picard works directly with importers.
- Toupargel was the second largest frozen food retailer in France after Picard and the leader for frozen food home deliveries, before Thiriet, Maximo and Argel. In 2019, the company was bought and is now called Place du Marche-Toupargel and diversified half frozen and half fresh
produce including organic. Frozen food sales are still home delivery throughout France through orders via internet. In 2020, Toupargel sales of frozen foods amounted to $227 million, and offers opportunities primarily for U.S. suppliers of fish and seafood.

- Biocoop is a network of specialized organic, fair trade and ecological products including food and non-food products. Biocoop has 623 stores throughout France and total sales in 2020 amounted to $1.8 billion. Biocoop sources its products through different buying offices.

### III. Competition

Most exporters within the EU conduct market promotion activities in France. Products such as fresh or preserved fruits and vegetables, wine, beer, fish and meat are commonly promoted in trade shows, advertisements and supermarkets. Third countries promoting food products in France include Norway, Israel, Morocco, South Africa, Argentina, Brazil and Canada.

**Overall Competitive Situation facing U.S. Suppliers, Calendar Year 2020**

<table>
<thead>
<tr>
<th>Product Category and Imports from the United States</th>
<th>Main Suppliers in Percentage</th>

IV. Best Product Prospects

Products identified as opportunities for U.S. Suppliers
Fish and seafood: salmon, cod, lobster, scallops. Please see report for more information
Citrus fruits and Nuts: grapefruit, almonds, pistachios, and other nuts
Salted and sweet snacks, confectionary products
Spices, sauces, seasoning
Wine and other alcoholic beverages
Carbonated drinks, juices
Pulses
Canned fruit/vegetables, marmalade.

Products not present in significant quantities but that have good sales potential

- Energy drinks, 14 percent estimated annual growth and market estimated at USD 281 million
- Organic foods, 13 percent growth and market valued at USD 13.6 billion
- Kosher foods, 14 percent estimated annual growth and market estimated at USD 0.6 billion
- Halal foods, 6 percent estimated annual growth and market estimated at USD 8.5 million

Products not present because they face significant trade barriers

- Vitamin-enriched flour
- Meat products with hormones and poultry products
- Biotech-derived products that are not approved in the EU

For more information on product trade restrictions within the European Union, please refer to U.S./EU Mission Food and Agricultural Import Regulation and Standards Report (FAIRS).

V. Post Contact and Further Information

If you have any questions or comments regarding this report, need assistance exporting to France or desire French buyers contact lists, please get in touch with the U.S. Agricultural Affairs Office in Paris:

U.S. Department of Agriculture, Foreign Agricultural Service
Embassy of the United States of America
2, avenue Gabriel 75382 Paris Cedex 08, France
Phone: +33-1 4312 2245
Email: agparis@fas.usda.gov

Please view our Home Page for more information on exporting U.S. food and beverage and to find list of French market sector/briefs and other detailed reports.
