Update on MRL Violations in Japan

2007

Approved by:

Report Highlights:

This report contains information on recent MRL violations found in Japan. It is an update on GAIN JA6036.

Includes PSD Changes: No
Includes Trade Matrix: No
Unscheduled Report
Tokyo [JA1]
[JA]

On May 29, 2006 Japan drastically strengthened its regulations on pesticide and animal drug residues in food by switching to a so-called Positive List system. Since that time there have been many MRL violations on both imported food and domestic food. This does not indicate an increase in food safety problems. Instead, it is an indication of more comprehensive testing and much stricter MRLs. Therefore, consumers should feel more confident rather than less confident about the safety of their food in terms of chemical residues.

The Japanese Ministry of Health, Labour and Welfare (MHLW) regularly publishes information about all violations on imports on its website in Japanese. This report summarizes the information MHLW has given about import violations as well as the information about domestic violations that we were able to find. It should be noted that because MHLW does not regularly publish information about domestic violations, that part of our list was gleaned from newspaper articles and conversations with prefectural level government authorities. Therefore, the list on domestic violations is incomplete and probably does not contain all violations.

This is an update to GAIN JA6036, which covers the import violations found in the first two months after the positive list was implemented.

Domestic Violations:
