Exporter Guide

Update 2013

Approved By: Steve Shnitzler, Director of ATO Japan Prepared By: Chika Motomura, Marketing Specialist, ATO Osaka

Report Highlights:

Japan continues to represent one of the best opportunities in the world for U.S. exporters of food products. The total food and drink market in Japan is huge, valued at around \$810.8 billion. In 2012, the United States exported \$15.09 billion worth of agricultural and related products to Japan. There exist tremendous opportunities for U.S. exporters who are willing to follow the strict Japanese regulations and keep up with the fast-moving trends in this market.

I. Market Overview

Japan continues to be one of the best opportunities in the world for U.S. exporters of food products. In 2012, the United States exported \$14.26 billion worth of agricultural and fish products to Japan (\$15.09 billion including forest products and other agricultural related products). The total food and drink market in Japan is huge, valued at around \$810.82 billion, when the food retail sector and the food service sector are combined. If you have a quality product that meets the needs and wants of Japanese consumers, that can be produced and delivered competitively, and you have patience to research both the differences in consumer tastes and government regulations, you can build an attractive market position in Japan.

1.Current Trends

Japan's market for high-value foods and beverages continues to change dramatically, with the latest trends toward functional, healthy and nutritious foods. While traditional menus and tastes still generally guide the average Japanese consumer's consumption habits, Western and other Asian ethnic cuisines are making a major impact in the market.

The Japanese consumers tend to be willing to accept high prices for quality and convenience. However, at the same time, due to the protracted sluggish economy in the country, the consumers, in general, demand good value in the products they purchase as well. Major supermarket chains are coping with this situation by introducing a wide variety of their own private brands, while many restaurant chains are dealing with the situation by further reducing their prices in order to stay competitive in the industry.

At the end of 2012, the Liberal Democratic Party (LDP) regained the power and the new Prime Minister, Mr. Shinzo Abe, began his new economic policy called "Abenomics" in order to get the Japanese economy out of its decades-old stagnancy. Some industries are showing improvement, but the overall economic recovery is yet to be seen.

As the Japanese population is predicted to decline due to a low birth rate, the Japanese food market may weaken in the future. Food retailers and food service operators are competing for consumers on a number of fronts, including price, convenience, variety and safety. Some companies are seeking a way to survive in the industry through mergers and acquisitions or tie-ups with partners beyond their traditional business channels. However, as the market continues to segment and as the population gets older and wealthier, the opportunities for high quality, high value foods that meet the demand of the market will only increase.

2. U.S. Advantages and Challenges

The Japanese market offers a number of benefits to U.S. exporters, but it is not without difficulties. To put these opportunities in perspective, here is a list of the most important U.S. advantages and challenges:

Table 1. Advantages and Challenges

| U.S. Advantages | U.S. Challenges |
|--|---|
| U.S. food cost/quality competitiveness Wide variety of U.S. food products Reliable supply of U.S. agricultural products Advanced U.S. food processing technology Relatively low U.S. shipping costs Science-based U.S. food safety procedures Growing Japanese emulation of U.S. cultural and food trends Japanese food processing industry seeking new ingredients Changes in the Japanese distribution system, becoming similar to that of the U.S. Japan's dependence on foreign food supply | Increasing food safety concerns and demands for food production information among Japanese consumers Long distance from Japan Consumer antipathy toward biotech foods and additives Japanese preoccupation with quality Consumers' preference of domestically produced products High cost of marketing in Japan Complicated regulations and laws High duties on many products Increasing competition with China and other food exporting countries Exporters are often expected to commit to special contract requirements and long-term involvement |

II. Exporter Business Tips

The following are suggestions on exporting food products to Japan.

1. Tips to Deal with Japanese Buyers and Traders

Japanese business people, no matter how Western they may appear, do not always approach business relations in the same way as Americans. Some differences are simply due to the language barrier, others are due to differences in deeply held traditions and practices. To help bridge these gaps, we suggest that you:

- Speak slowly and clearly, even if you know that your business counterparts speak English.
- Use clear-cut, simple words and expressions when writing in English.
- Use e-mail and fax, rather than telephone, whenever possible.
- Make appointments as far in advance as practical.
- Carry plenty of business cards (meishi). Present them formally at each new introduction—and be sure

they have your personal information in Japanese on the back.

- Be on time for all meetings; the Japanese are very punctual.
- Be braced for negotiations which require a number of meetings and probably several trips to reach an agreement.
- Be prepared for misunderstandings; use tact and patience.
- Be aware that in Japanese, "Hai," (yes) may mean, "I understand," not, "I agree."
- Limit the discussion of business at evening meals, or when drinking with new Japanese counterparts; these occasions are for getting to know one another and building trust.
- Be aware of major Japanese holiday and business break periods, e.g., the New Year holiday (approximately from December 30 to January 3); Golden Week, a combination of national holidays (April 29 May 5); and *Obon*, an ancestor respect period lasting for a week in mid-August during which many companies close and business people take vacations.

2. Consumer Preferences, Tastes and Traditions

These ideas may help you consider your product approach.

Japanese consumers:

- Are highly concerned about food safety and traceability commonly used terms are *anzen* and *anshin* that respectively mean 'safety' and 'peace of mind';
- Place great importance on quality—producers that fail to recognize this will not succeed;
- Appreciate taste and all of its subtleties—and will pay for it;
- Are well-educated and knowledgeable about food and its many variations;
- Are highly brand-conscious—a brand with a quality image will sell;
- Care a great deal about seasonal foods and freshness—promotion of these characteristics can significantly build product sales and value;
- Are increasingly health-conscious;
- "Eat with their eyes" and often view food as art. A food product's aesthetic appearance—on the shelf, in the package, and on the table—is important in building consumer acceptance;
- Have small families and homes with minimal storage space, thus, large packages are impractical. Although stores such as Costco continue to do well, reflecting the increasing need for value, not just quality.

3. Export Business Reminders

Below are some important reminders about exporting to Japan:

- Limit your number of trading partners, but try to avoid exclusive agreements with any one company.
- Use metric terms.
- Quote price in CIF (cost, insurance and freight), unless the importer requests FOB (Free on Board).
- Price competitively; exclude U.S.-based costs such as domestic sales, advertising, marketing, etc.
- Be patient regarding requests for information on ingredient, production process and quality assurance. Ensure that all the information is correct and respond with diligence and in a timely manner.
- Use letters of credit to reduce risk.

- Hedge export values with your U.S. bank if you are concerned about exchange rate risk.
- Set up wire transfers for payments.

4. Food Standards and Regulations

U.S. exporters often find Japanese food standards difficult to deal with. Here are a few tips:

- Read the USDA's "Japan: Food and Agricultural Import Regulations and Standards (FAIRS) Country Report." This concise document, covering food laws, labeling, packaging, import procedures, and other key regulations, should be a helpful guide for all food exporters. It is updated annually. (At the URL, <u>http://gain.fas.usda.gov/Pages/Default.aspx</u>, click "search reports," and set your search to select "Country: Japan", and "Categories: FAIRS Subject Report" under "Exporter Assistance".)
- Read other USDA Japan reports and information. Go to the USDA Japan homepage (<u>http://www.usdajapan.org</u>) and click the "Reports" menu button to get market information and reports.
- Read the Japan Food Sanitation Law. Make sure that the labeling you plan to use meets Japanese requirements: (<u>http://www.jetro.go.jp/en/reports/regulations/</u>)
- Check the JETRO report, "Specifications and Standards for Foods, Food Additives, etc. under the Food Sanitation Law" (<u>http://www.jetro.go.jp/en/reports/regulations/</u>). This summarizes specific technical import procedures especially for processed food products.
- Carefully check your food additive admissibility: (e.g., preservatives, stabilizers, flavor enhancers). For information on U.S. laboratories approved by the Japanese Government, visit the Ministry of Health, Labor and Welfare's website at http://www.mhlw.go.jp/topics/yunyu/5/dl/a3.pdf.
- Verify all relevant import requirements with your Japanese customers. They will normally have updated information on Japanese regulations.
- Provide a detailed list of product ingredients to your Japanese partners to allow them to verify their acceptability. Do not assume that U.S. approval means Japanese approval.
- For organic foods in the United States, make sure you obtain USDA's National Organic Program approval. Then, working with your importer, you can register your product under the Japan Agriculture Standard (JAS). Or you can directly have your product certified under JAS Organic. (<u>http://www.ams.usda.gov/AMSv1.0/nop</u>)
- After you have completed the above steps, check with the Agricultural Affairs Office at the U.S. Embassy in Tokyo (agtokyo@fas.usda.gov) with any remaining questions on issues such as standards, tariffs, regulations, labeling, etc. Depending on content, the ATO Japan offices may also be able to directly respond to your inquiries.

5. Import and Inspection Procedures

Your job is not complete when your product has been ordered and shipped. You still must get it through Japanese customs and port inspectors. The points outlined below should aid in this process:

- As noted in section 4, Review the USDA's "Japan: Food and Agricultural Import Regulations and Standards (FAIRS) Country Report" to get a better understanding of these procedures
- Confirm the specific tariffs that apply to your product before pricing to potential customers. Remember that tariff rates in Japan are calculated on a CIF basis and that Japan adds a 5% *consumption tax to all imports. Japan tariff rates can be found here: <u>http://www.customs.go.jp/english/tariff/</u>

* The rate is slated to be raised to 8% in April 2014.

- Do not send samples for preliminary checking without an actual request from your importer. Be aware that many parcel delivery companies recently adopted the policy of <u>not handling any animal or plant</u> <u>quarantine items (including dried fruit and nuts)</u> due to possible delay in delivery caused by quarantine inspection. Make sure the delivery service you are going to use deals with your product before actually sending it to Japan.
- Recognize that customs clearance officials' application of the law and interpretation of regulations may differ from one port to another. Thus, the least expensive or most convenient port may not be the best choice. Check with your local customer or in-country agent representative.
- Be sure to complete all documentation thoroughly and accurately.
- Send copies of documentation in advance especially for the first-time shipments, which can assist your importer in getting timely release of your cargo from customs and clarifying matters with quarantine officials.
- For fresh products, check phytosanitary and sanitary requirements in advance and obtain proper USDA inspections in the United States (<u>www.aphis.usda.gov</u> (for plant products and pet food) and <u>www.fsis.usda.gov</u> for meat and poultry products).
- Approval for biotech agricultural products and ingredients is regulated by the Japanese government. If these products are intended for consumer consumption, they will also require specific labeling to be admitted to Japan.
- Make sure you have the proper import documents accompanying shipment: 1) Import Notification; 2) Health Certifications; 3) Results of Laboratory Analysis; 4) Manufacturer's Certification showing materials, additives and manufacturing process. (Note: Products imported for the first time may require more documentation.)

III. Market Sector Structure and Trends

One of the exporter's important strategic decisions—other than those dealing with the product itself—is how to position the product and get it to the Japanese consumer, i.e. through retail, food service, and/or food processing channels. The following is the brief description of the three sectors.

1. Retail Sector

Japan's food retail market generated about \$530.70 billion (44.03 trillion yen) in 2012, 1.0% up from the previous year. Although it is a huge market, it is highly fragmented. Unlike in North America and the EU, Japan's retail food sector is characterized by a relatively high percentage of specialty/semi-specialty stores, including "mom-and-pop" stores and local grocery stores. Such small retailers, however, are losing ground to larger general merchandise stores (GMS), supermarkets (SM), and convenience stores (CVS). These three categories offer excellent opportunities to U.S. food exporters although there is stiff competition with suppliers of other countries as well as domestic manufacturers.

Food retailers in Japan are classified into following major segments. The characteristics of these channels are listed in the table below:

Table 2. Retail Store Opportunities for U.S. Food Exporters

| | GMS General Merchandise stores | SM Supermarkets | Department Stores | CVS Convenience stores | Specialty Stores | Semi Specialty Stores |
|---|---|----------------------------|----------------------|------------------------------|---------------------|-----------------------------|
| Share (2012) | 19.4% | / 0 | 4.4% | 13.2% | 63. | 0% |

Chart 1. Retail Food Distribution Channels

Source: METI Commercial Census 2012

General Merchandise Stores / GMS

Japan's general merchandise stores (GMS), like supercenters in the United States, offer shoppers the convenience of one-stop shopping for groceries, perishables, clothing, household goods, furniture, and electrical goods. Food sales, which typically used to make up one third of the total sales at GMS's, now reach a half of the total sales or even more at some chains.

GMS's are operated by major national chains that have nationwide networks with hundreds of outlets and central purchasing is typical. GMS's are generally receptive to foreign products, although they often demand product modification to suit market tastes and preferences. They often purchase foreign products via trading companies. Inventory risks, long lead times, and communication problems make GMS buyers hesitant to import products directly. However, as Japan's retail market becomes more competitive, some GMS's are opting for direct purchase and offering excellent opportunities to U.S. food exporters.

Supermarkets

Supermarkets (SM) stores are smaller in size than GMS's and are more specialized in food and household goods. On average, food items such as perishables, readymade-meals, bakery, and refrigerated foods account for

70% or more of the total sales of these stores. Supermarkets are facing higher purchasing costs than GMS's. They are seeking a way to survive in the market through product/service differentiation, private brand development, and global sourcing. To gain economies of scale, regional supermarkets are forming alliances, such as joint merchandising companies, with non-competing retailers. Thus, although individual retailers are not large enough to engage in direct offshore sourcing, through joint merchandising companies, they offer excellent opportunities to U.S. food exporters. These retailers carry imported products particularly as a mean to differentiate themselves from other competing stores in their region.

Department Stores

Department store sales have been declining in recent years due to increasing competition with GMS's and other retailers. Food sales made by department stores currently account for less than 5% of the total retail food sales. Nevertheless, department stores offer excellent opportunities for imported high-end food products and they are an under-exploited channel for U.S. exporters. Most department stores have extensive basement concessions (i.e., small, independently operated retail stands), otherwise known as 'depachikas'. There are also outlets operated by department stores themselves, offering an opportunity for U.S. exporters to launch pilot stores or to conduct marketing trials. Department stores provide a showcase of imported, novelty, and high-end products and thus provide U.S. exporters of high-quality and fancy foods with an excellent opportunity to showcase their products.

Convenience Stores

Convenience stores (CVS) are becoming an extremely important sales channel in Japan. They have small floor space, about 100 m² on average, and typically stock about 3,000 products. They are well known for their high turnover and advanced inventory management.

Convenience stores derive their competitive advantage from high turnover and efficient supply chains. Thus, short lead-time and nationwide distribution are essential in dealing with major CVS operators. While this presents a significant challenge to many overseas companies, indirect business with CVS, nevertheless, offers huge potential to them. Global sourcing of ingredients and raw materials, especially for the use of fast food, has become more popular. CVS operators not only work with consumer product manufacturers but also with trading firms and ingredients manufacturers. In order to differentiate themselves from their competitors, major CVS operators are constantly searching for novelty items and new concepts, which offer good opportunities to U.S. food exporters.

Local General and Specialty Stores

Predominantly, Japan's food retail trade still consists of local specialty stores and grocery stores, most of which are small, family-run operations. These retailers, however, offer limited market potential to exporters. They are served by secondary or tertiary wholesalers, which, in turn, are supplied by Japan's major wholesalers. This sector has been shrinking as the food market has become more competitive. Deregulation of liquor licensing, for example, led to the closure of many small family-owned liquor shops. There are only a small group of retailers who specialize in imported products in Tokyo and other metropolitan areas who may be able to offer opportunities to U.S. exporters.

Home Meal Replacement (HMR)

As in North America, the growth of the HMR sector is one of the most important developments in the Japanese food sector in recent years. Examples of popular products in this sector are prepared foods sold at supermarkets, takeout meals sold at specialty stores, and various readymade foods sold at convenience and department stores.

(There is thus some overlap with the channels outlined above.) The sector is expected to become an important market as the number of working women, single households and the elderly rises. The sector consists mostly of small regional companies and is now going through a series of consolidation. Larger companies in the sector are suppliers for major supermarket operators, convenience stores and tenants in department stores.

There are a number of constraints facing U.S. exporters in this sector. High-volume buyers are still relatively rare; global sourcing and direct transactions with foreign suppliers are also uncommon. In addition, relatively high turnover for menu items often makes companies hesitant about global merchandising. Nevertheless, HMR's are potentially an ideal customer for U.S. food exporters, especially for those who are willing to meet stringent cost, quality, and size specifications.

There is a separate report on Retail Food Sector in Japan.

Please visit: <u>http://gain.fas.usda.gov/Pages/Default.aspx</u>, and click "search reports," and set your search to select "Country: Japan," and "Categories: Retail Foods" under "Exporter Assistance".

2. HRI Food Service Sector

The food service sector generated \$280.12 billion (23.24 trillion yen) in sales in 2012, 1.5% up from the previous year. The sector had been stagnant for several years due to the economic downturn in the country. In particular, it was adversely affected as consumers refrained from dining out and traveling after the Great Earthquake in March 2011. However, consumers are starting to dine out again.

This sector can be divided into four major segments by business category: 1) restaurants; 2) hotels and other accommodation facilities; 3) bars and coffee shops; and 4) institutional food service companies. The following is the update by category.

| | Restaurants | Hotels/ | Bars/ | Institutional |
|---------------------------------|-------------|----------------|--------------|---------------|
| | | Travel related | Coffee shops | |
| Sales Share (2012) | 53.7% | 11.9% | 20.0% | 14.5% |

Chart 2. Food Service Distribution Channel

Source: Food Service Industry Research Center

Restaurants

The restaurant segment, the leading segment of the HRI food service sector, generated approximately US\$ 150.30 billion in sales in 2012, 2.0% up from the previous year. The growth is considered to come from reaction to the restrained consumption after the Great Earthquake in March 2011.

The restaurant segment is highly fragmented and most restaurants are small. However, small family-owned restaurants have been disappearing due to increased competition against large chain restaurants as well as against HMR.

Major family restaurant chains are becoming increasingly important for international suppliers. Because they compete primarily on price, they are active in global sourcing. These chains, thus, represent a significant opportunity for U.S. food exporters. Chain restaurants are particularly interested in semi-processed or precooked foods. Premixed ingredients, seasonal fruits and vegetables, specialty sauces and seasonings, and desserts are particularly attractive products for chain operators.

Japan has a large and competitive fast food segment made up of both domestic and overseas operators. Generally, fast food restaurant operators are volume buyers of specific raw materials. In addition to low cost, suppliers must provide a stable supply of products at a specific quality to compete effectively in this segment. Exporters can approach most large restaurant chains directly but for the smaller chains, exporters must build relationships with trading companies or major food service wholesalers.

Hotels and Other Travel-Related Facilities

The recovery of this segment was notable with 4.7% up from the previous year. As consumers, who had refrained from traveling after the Great Earthquake in 2011, started traveling again, reducing vacancy rates. Major hotels are attractive markets for U.S. exporters. They are more oriented toward Western food and frequently have "food fair" promotions featuring a variety of countries' cuisines. Exporter's challenge lies in developing effective distribution channels to reach them. Hotels offer high consumer visibility and thus promotional value for exporters. Highlighting the fact that a particular exporter's product is used by a major upscale hotel chain, for example, is a good way to promote the product to retailers and other prospective buyers. Railway companies and domestic airlines operate kitchens in Tokyo and Osaka, while the overseas airlines tend to use contract caterers. These Japanese companies tend to feature Japanese cuisine. But there are companies who are actively procure imported foods as well.

Theme parks are also an important part of the sector. Restaurants and snack outlets at both Tokyo Disneyland

and DisneySea, as well as Universal Studios Theme Park, for example, draw millions of visitors every year. Other theme parks around the country also attract thousands of visitors a day and offer opportunities to U.S. food exporters.

Bars and Coffee Shops

These establishments account for 20.0% of the total food service sales and are a major market for foreign beverages and snack foods. The sales from the segment showed 1.1% decrease in 2012, following 0.6% decrease in the previous year. These establishments tend to be small and difficult to reach. The best way to reach these outlets is to work with the large food distributors.

Institutional Food Markets

The institutional market comprised of cafeterias at factories, offices, hospitals and schools, generated \$40.49 billion in 2012, 0.5% up from the previous year, accounting for 14.5% of the total food service sales. The cafeteria operations of these institutions are typically served by contract caterers. Building relationships with caterers is, therefore, essential to crack this market. Both contract caterers and institutions with their own kitchens are typically serviced by large food service wholesalers. Because the most important criterion for these institutional suppliers is cost competitiveness, the sector offers huge market potential to U.S. exporters. Long-term prospects are brighter as higher demand from contract caterers, serving the hospital and social welfare segments, is expected to grow due to an increasing aging population.

There is a separate report on HRI Food Sector in Japan.

Please visit: <u>http://gain.fas.usda.gov/Pages/Default.aspx</u>, and click "search reports," and set your search to select "Country: Japan," and "Categories: Food Service – Hotel Restaurant Institutional" under "Exporter Assistance".

3. Food Processing Sector

Food manufacturers in Japan offer a number of opportunities to U.S. exporters and they have the capacity to buy the following types of products from overseas:

- Ingredients for production in Japan;
- Finished products to be sold under their own labels;
- Finished products to be sold under the exporter's brand, but distributed through the importer's channels.

Dealing with food processors offers advantages as follows:

- They often buy in large volumes;
- They have sophisticated distribution systems;
- They have a good understanding of their suppliers' businesses.

Exporters should be prepared for requests from Japanese manufacturers, as they are very demanding regarding the release of data on product quality, origin of ingredients, and other related information. In large part, regulations from the Government of Japan require manufacturers to protect themselves from risks. Such information is also increasingly important because of growing concerns about food safety and traceability among Japanese consumers. U.S. exporters must be prepared to deal positively and promptly with these issues to compete in this market.

There is a separate report on Food Processing Sector in Japan.

Please visit: <u>http://gain.fas.usda.gov/Pages/Default.aspx</u>, and click "search reports," and set your search to select "Country: Japan," and "Categories: Food Processing Ingredients" under "Exporter Assistance".

4. E- Commerce and mail-order

Japan's proportion of Internet users reached 78.2%, equivalent to that of the U.S. (79.0%) in 2010. With this increase in the Internet users, online shopping is becoming more and more popular among the Japanese.

According to Japan Direct Marketing Association, the total mail-order sales including e-commerce reached \$65.21 billion, 6.3% up from the previous year in FY2012 (April to March). Although the sales growth declined from 9.0% in FY2011 to 6.3% in FY2012, the sector maintained higher growth than the other retail sectors, and has recorded positive growth for 14 years in a row. The sales were doubled in a decade and e-commerce has been the main growth engine in the industry. While online sales are often dominated by electronics and clothing, food, in particular organic food and natural food, is a large category within the area of e-commerce.

According to the Japanese Ministry of Internal Affairs and Communications, online sales are expected to continue to expand as customers cite that internet shopping has many advantages such as that it can be done 24/7, saves time with no transportation cost, makes comparing products and prices easy, and allows for a larger selection. Now major supermarket chains are expanding their service through the Internet as well.

5. Population Trends

Japan's population has undergone dynamic shifts in age proportions since the 1980's with decreasing number of births and a growing aging population. Until recently, Japan had been experiencing small but steady annual population growth. It was not until the first half of 2005 that Japan experienced negative population growth, when the number of deaths outnumbered the number of births. According to Ministry of Health, Labor, and Welfare, Japan experienced a -0.01% population decline in 2005 for the first time since 1988 when Japan began compiling population statistics. According to the national survey in 2012, Japan's population was estimated at 127.52 million, 0.22% down from the previous year.

By the year 2050, Japan's population is predicted to decrease to 95 million, with the ratio of individuals over 65 climbing from 7%, in the 1970's, to 40%. While one may consider this to be a negative, the older population in Japan enjoys a high standard of living and is relatively wealthy. The aging of Japan will present opportunities for high value, high quality products.

Chart 3. Japan's Population Growth and Expected Decline

IV. Best High-Value Import Prospects

The following presents a list of products, which are considered to hold "best" import prospects. They have been selected based on a number of criteria—high volume, demonstrated growth, and U.S. competitiveness.

| Product Category | HS Code | 2012 Market Size | 2012 World Imports | 5 year Avg.* Annual Import Growth (2008- 2012) (volume) | Import Tariff Rate | Key Constraints to Market Development | Market Attractiveness for U.S.A. |
|--|------------|------------------------|---|--|--------------------------|---|---|
| 'resh Fruit Sect Vorld Import V Vatermelon | | 2,277million Volume: | World | Volume | 6% | The Japanese | The Japanese trade |
| | | 317,600 MT | volume: 1,413MT value: \$1.89 million | growth: World: 94.37% | | watermelon market is heavily dominated by domestic products. U.S. watermelon is relatively new to the Japanese market, and | is increasingly |
| | | | US volume: 842MT value: \$0.96 million | US:92.75% | | consumers and trade are not well aware of their attractive feature Consumers prefer domestic products. | The ongoing growth in the s packaged cut fruits market provides additional opportunities. Domestic production is declining. |

Table 4. Best Import Prospects
