Bosnia and Herzegovina

Food and Agricultural Import Regulations and Standards - Narrative

FAIRS Country Report

Approved By:
Jim Dever
Prepared By:
Sanela Stanojcic-Eminagic

Report Highlights:
Sections updated: I, II, IV, and V.
Section I. Food Laws:
Under the Dayton Peace Agreement, Bosnia and Herzegovina (BiH) is divided into two Entities, the Federation of Bosnia and Herzegovina (F BiH) and the Republika Srpska (RS). In general, both Entities are responsible for agricultural and food issues in its Entity, and there is no national-level agricultural ministry. However, BiH has three common national-level food institutions: the State Veterinary Office, the Plant Health Administration, and the Food Safety Agency. The European Union (EU) has recommended the establishment of a national-level agricultural ministry, which will ensure that BiH has one competent food authority when negotiations for EU accession begin. In the absence of a national agricultural ministry, the Ministry of Foreign Trade and Economic Relations (MFTER) has taken the lead in food safety. An agricultural department supported with EU funds has been established within the MFTER, as the nucleus for the future agricultural ministry.

In the past each Entity had its’ own food laws and enforcement mechanisms. Only recently have four important national-level laws been adopted but not yet fully enforced – the Veterinary Law (BiH Official Gazette # 34/02), the Food Law (BiH Official Gazette # 50/04), the Law on Agriculture, Food and Rural Development *(BiH Official Gazette # 50/08), and the Law on Genetically Modified Organisms (BiH Official Gazette # 23/09).

Generally, BiH food laws and regulations are a mixture of old Yugoslav laws and new laws and regulations similar to the EU’s, which is a requirement because of the EU integration process. New legislation is continuously being drafted and adopted and therefore, it is recommended that exporters contact the FAS Sarajevo office in case of an unclear situation regarding food legislation.

Foreign trade and customs policies

National level laws, including the Law on BiH Foreign Trade Policy and the Law on BiH Customs Tariffs, regulate issues regarding foreign trade and customs tariffs.

The Law on BiH Foreign Trade policy promotes the free trade of goods and services. Officially, restrictions and import bans are applied to protect public health and the domestic market against subsidized or dumped products and to prohibit discrimination against imports or the products of a particular country.

BiH has a single ministry in charge of foreign trade issues: the Ministry of Trade and Economic Relations (MFTER). MFTER is a “super” institution on the national level, in charge of high-level trade issues such as international agreements and special agreements on trade with other countries.

BiH is not a member of the World Trade Organization (WTO) but started accession negotiations in 1999. BiH is a member of the Central European Free Trade Agreement (CEFTA) that also includes Albania, Croatia, Macedonia, Montenegro, Moldova, Serbia, United Nations Mission in Kosovo (UNMIK), and Kosovo. On June 16, 2008, BiH signed the Stabilization and Association Agreement (SAA) with the European Commission and following that, customs duties for some products coming from the EU were lifted on July 1. For the remaining products, a gradual phase-out will follow. BiH will have a transition phase for trade liberalization of certain industrial and agricultural products; duties will be phased out within one to five years, depending on the product.

A common customs administration, the Indirect Tax Administration (ITA) has been established and according to the Law on BiH Customs Tariffs, BiH applies a single customs policy for imports. The Harmonized System (HS) of commodity description and coding, developed by the World Customs Organization (WCO), is applied. Customs tariffs for agricultural products range from 0, 5, 10 and 15 percent with an additional charge for some agricultural products based on unit weight, in KM [1] /kg (for product specific tariff information, please contact the Sarajevo FAS office listed in Appendix II).
Taxes are applied at the same rates for locally produced and imported goods. On January 1, 2006, the ITA introduced a 17 percent single value-added tax (VAT).

**Food safety**

While the foreign trade and customs policies are unified at the national level, the food safety responsibility is still shared between the national-level and the entity level authorities, including prior import approvals, food certificates and food laws and regulations.

The Bosnian Government has made an effort to unify veterinary and phytosanitary laws and regulations. A national-level, state veterinary office (SVO) was established in December 2000, and a common veterinary law was adopted to harmonize the Entity laws. Consequently, the SVO started to control imports and exports of veterinary products and took control of veterinary border inspections. The state–level phytosanitary administration (Plant Health Administration) and the food safety agency were established in spring 2006. These agencies are in charge of policy issues, drafting regulations, improving food safety and plant health protection, serving as the inquiry point and representing BiH internationally. The Ministry of Foreign Trade and Economic Relations is the umbrella organization for the phytosanitary and veterinary agencies, while the food safety agency is under direct authority of the Council of Ministers (state government).

There has also been a reorganization of the entity–level inspections, such as the inland veterinary inspection, phytosanitary, sanitary and market inspections. These inspections were previously parts of the ministries of agriculture, health and trade but are now merged into a joint entity inspectorate.

The MFTER, SVO, the Entities’ Ministries of Agriculture, Health and Trade and, as of recently, the entity–level inspectorates share responsibility for food safety. The SVO issues import requirements and import approvals for live animals and animal products, while the state Plant Health Administration (PHA) has the responsibility to issue final import permits for seeds, planting material and pesticides, based on the Entities’ phytosanitary department’s technical opinion. The SVO border inspectors and the Entities’ phytosanitary inspectors inspect goods at border crossings.

The Entities’ sanitary inspectors are responsible for the wholesomeness of imported foods. Inspections take place at border crossings or, more commonly, at the customs clearance point.

Finally, the Entities’ market inspectors are in charge of quality control for imported foods. They inspect imported food products at the customs point and food in retail distribution.

Both Entities in BiH have inherited and still use some food laws from the former Yugoslavia. While “BAS” is the officially recognized Bosnian standard (Law on Standardization, BiH Official Gazette 19/02), when it comes to food ordinances the former Yugoslavia standard “JUS” is still in use occasionally. Most newly adopted food laws and regulations are in-line with European Union (EU) directives. Future laws and regulations will also be harmonized because BiH has undertaken major political and economic reforms with the goal of eventual accession to the EU.

The following laws and regulations are relevant both for locally processed and imported foods:

- **The state-level Food Law (adopted in November 2004, BiH Official Gazette # 50/04)** regulates the following issues:
  - Establishment of the state-level Food Safety Agency;
  - General principles and requirements concerning the safety of food and cattle feed;
  - Responsibilities of the relevant persons in the food business and cattle feed business with regard to the safety of food and
cattle feed;
- General conditions for placing novel food on the market;
- General conditions for placing cattle feed that contains or consists of genetically modified organisms on the market;
- Official control system;
- Official research laboratories and reference laboratories;
- Crisis management and emergencies management, etc.

The Law is just a framework law that has to be followed by specific and detailed regulations/bylaws in the future. A number of bylaws should be drafted and enforced in order to fully implement the Food Law. Currently, the former Yugoslavia food bylaws are still being used, which are 20 to 30 years old, and in some cases modified by the Entities. Because of that, the bylaws are outdated and not in-line with international standards and recommendations, and they are also inconsistent and conflicting between the two Entities. The absence of clearly defined regulations is also affecting agricultural trade. For example, placing new foods on the market (including genetically modified foods) is currently forbidden because of the absence of detailed regulations that have to be drafted by the Food Safety Agency and then adopted by the Council of Ministers.

Some progress has been made starting in late 2008 with the adoption of a new food regulation based on the new Food Law. The following regulation was adopted in 2008 (BiH Official Gazette # 25/08, 83/08, 85/08, and 87/08):

- Law on Wine and Brandy;
- Rulebook on Refreshing Non-alcoholic Beverages;
- Rulebook on Use of Food Additives for Human Consumption;
- Rulebook on Use of Food Sweeteners;
- Rulebook on Use of Food Additives other than Colorants and Sweeteners;
- Rulebook on Use of Food Colors;
- Rulebook on Labeling of Nutritional Value of Packaged Foods;
- Rulebook on Strong Alcoholic and Alcoholic Drinks;
- Rulebook on General Labeling of Packaged Food; and
- Rulebook on Fruit Juices, Fruit Nectars and Similar Products;

The following regulation was adopted in 2009 (BiH Official Gazette # 23/09, 37/09, and 39/09):

- Law on Genetically Modified Organisms;
- Rulebook on Honey and other Bee Products;
- Rulebook on Control Methods for Honey and other Bee Products;
- Rulebook on Maximum Levels for Various Contaminants in Food;
- Rulebook on Official Control Methods for Sampling and Analyzing Levels of Lead, Cadmium, Mercury, Inorganic tin, 3-MCPD and Benzo (a) Pyrene in Foods;
- Rulebook on Official Control Methods for Sampling and Analyzing Levels of Dioxins and Dioxin-like PCBs in Various Foods;
- Rulebook on Official Control Methods for Sampling and Analyzing Levels of Nitrates in Various Foods;
- Rulebook on Official Control Methods for Sampling and Analyzing Levels of Mycotoxins in Foods;
- Rulebook on Salt for Human Consumption; and
- Rulebook on Conditions that Authorized Food Testing Laboratories must Comply with and on Accreditation Process for Laboratories.

The following regulation was adopted in 2010 (BiH Official Gazette # 25/10, 26/10, 27/10, 40/10, 42/10, 43/10, 48/10,
76/10, 77/10 and 97/10):

- Rulebook on Materials and Articles in Contact with Food;
- Rulebook on Plastic Materials and Articles in Contact with Food;
- Rulebook on Origin Marks and Geographical Indication Marks;
- Rulebook on Traditional Food Reputation Labels;
- Rulebook on Ceramic Articles in Contact with Food;
- Rulebook on Eggs Marketing Standards;
- Rulebook on Sugar;
- Rulebook on Methods for Sugar Analysis;
- Rulebook on Natural Mineral and Spring Water;
- Rulebook on Bottled Water;
- Rulebook on Sanitary Correctness of Drinking Water;
- Rulebook on Pasta, Pastry and Pastry Products;
- Rulebook on Grain Products;
- Rulebook on Bakery Products; and
- Rulebook on Beer;

The following regulation was adopted in 2011 (BiH Official Gazette # 21/11, 23/11, 25/11, 28/11, 30/11, 50/11, 51/11, 54/11, 71/11 and 72/11):

- Rulebook on Edible Vegetable Oils, Edible Vegetable Fats and Mayonnaise;
- Rulebook on Lubricating Grease;
- Rulebook on Raw Milk;
- Rulebook on Dairy Products and Starter-cultures;
- Rulebook on Condensed Milk and Milk Powder;
- Rulebook on Edible Casein and Caseinates;
- Rulebook on Active and Intelligent Materials and Articles in Contact with Food;
- Rulebook Amending Rulebook on Honey and other Bee Products;
- Rulebook on Extraction Solvents Used in Production Of Foods and Food Ingredients;
- Rulebook Amending Rulebook on Fruit Juices, Fruit Nectars and Similar Products;
- Rulebook Amending Rulebook on Use of Food Colors;
- Rulebook on Food Treated with Ionizing Radiation;
- Rulebook on Analytic Methods for Spirits and Alcoholic Drinks;
- Rulebook Amending Rulebook on Refreshing Non-alcoholic Beverages and Similar Products;
- Rulebook on Tea, Herbal Tea, Fruit Tea and Instant Tea;
- Rulebook on Quick-Frozen Foods for Human Consumption;
- Rulebook on Spices, Spices Extracts and Spices Mixes;
- Rulebook on Cacao and Chocolate Products;
- Rulebook on Biscuits and Similar Products;
- Rulebook on Egg Products;
- Rulebook on Foods Used in Energy-Restricted Diets for Weight Reduction;
- Rulebook on Dietary Foods for Special Medical Purposes;
- Rulebook on Foods Intended for Particular Nutritional Uses;
- Rulebook on Foods Enriched with Nutrients;
- Rulebook on Coffee, Coffee Products Surrogates and Surrogate Products
- Rulebook on Undesirable Substances in Animal Feed;
- Rulebook on Nutrition Labeling for Food; and
- Rulebook Amending Rulebook on Plastic Materials and Articles in Contact with Food.

- The Law on Sanitary Correctness of Food and Goods of General Use (taken from Yugoslavia Official Gazette 53/91) - This law applies to foods, spices, additives, processing equipment, wrapping material, as well as tobacco and products. It regulates both food hygiene (subject to the specific ordinances regulating presence of pathogenic microorganisms, parasites, pesticides and other contaminants, mechanical residues, changes in food quality due to the physical, chemical, microbiological and other processes, expiration date, original package and bulk-packaged foods labeling) and nutritive value (subject to the specific ordinances regulating quality of each type of food). Sanitary inspectors work in accordance with this Law.

- Enforcement is done in accordance with the Law on Market Inspection (FBiH Official Gazette 2/95, RS Official Gazette 10/97) and the Law on Quality Control of Imported and Exported Goods (BiH Official Gazette 13/03). Quality control for all types of products is done by visual check-up and for products listed in the above-mentioned Laws (almost everything that is considered as food) additional safety checks are done, using laboratory testing on basic ingredients. Visual check-ups involve product identification (origin, type, quantity), determining if labeling and packaging requirements have been met, and checking for the necessary statements containing the importer’s name and address, the product’s general appearance, taste, flavor, presence of residues, color, structure, etc. Specific ordinances define sampling procedures.

Quality control of imported products can be done again after the import procedure has been completed and prior to retail distribution on the market. Inspection can be done also after retail distribution.

The quality of individual groups of products is subject to specific ordinances (e.g. Quality of Meat and Meat Products, Quality of Milk and Milk Products, Rulebook on Honey and Other Bee Products, etc).

The Law on Genetically Modified Organisms or GMO (BiH Official Gazette # 23/09) is an overarching law for biotechnology. This Law sets conditions for limited use, importation, deliberate release into environment, and marketing of products that are composed of GMO, contain GMO, or derive from GMO. The Law is only a framework law that must be followed by future specific and detailed regulations/bylaws. However, the detailed bylaws are still pending the Entities’ approval and state government passage, so this area is still unregulated.

**Section II. Labeling Requirements:**

**General Labeling Requirements**

The Rulebook on General Labeling of Packaged Food (BiH Official Gazette #87/08) prescribes general requirements for the labeling of packaged food intended for distribution to final consumers or public food facilities, as well as specific rules related to presentation and advertising of food.

For foods placed on the market, the label must be written in one of the official alphabets and languages in use in Bosnia and Herzegovina.

The label must be easily and clearly noticeable, legible, unchangeable, non-erasable, and must not be covered with other text, stickers or marks.

The label declaration shall include any written marks, commercial marks, protection marks, trademarks, graphical logos or symbols pertaining to food, which is posted on the containers, stickers or tags, wrapping of foodstuffs and on the documents and notices accompanying or pertaining to such food.
The letters used to print product names and manufacturer names must be larger than the letters used to print other data in the declaration, and their size must allow the consumer to easily obtain clear data and knowledge on the product.

Multi-language labels are permitted.

The label information should not misguide consumers in terms of origin, composition, net quantity, expiry period (durability), method of production or manufacture of foods.

Imported foods must possess declarations written in one of the alphabets or languages in official use in Bosnia and Herzegovina.

**The label of packaged food must contain the following data:**

a. Name under which the food is sold and the commercial name if the food has it;
b. List of all ingredients;
c. Quantity of specific ingredients or ingredient category;
d. Net quantity, in units of volume (for liquids) or weight for packaged other food, expressed in the measurement units used in BiH;
e. Expiry date (best before date);
f. Conditions for storage and warehousing of food, where this is required or where these may affect the durability of the foodstuff;
g. Name and address of manufacturer or one that packages and/or places the food on the market;
h. For import products, in addition to the name and full address of the manufacturer, also include the name and full address of importer, country of origin («manufactured in ...»), and country from which the food or foodstuff is imported («imported from...»);
i. Instruction for use, where this is required;
j. For drinks, the quantity of alcohol by volume, if they contain more than 1.2 vol % of alcohol;
k. Label of the party (series, batch or lot) of food;
l. Quality category and class of product if under separate regulations foodstuff is subject to categorization or classification.

The label should contain the full address of the manufacturer and full name and address of the importer (city, street and number, and it may also contain the telephone number, post office box number, and the electronic mailing address).

Food that is processed by ionizing radiation must be labeled with the mark «treated or processed by ionizing radiation» or «conserved by radiation», which must be placed close to the name of the food. Food that is packaged using gases permitted for packaging for the purpose of preservation must be labeled with the mark «packaged in controlled atmosphere».

Allergic substances must always be labeled.

In addition to the data prescribed in this Rulebook, the label for food must also contain information pertaining to the food, if this is prescribed by a separate regulation (e.g. statement on the nutritional or biological and energy values, the bar code, the control veterinary number etc).

Specific labeling regulations apply to specific foods such as genetically modified organisms (GMO), baby food, diet food, food aimed at reduction of body mass, food for athletes, food additives, containers and packaging materials, cocoa and
chocolate products, honey, sugars, fruit juices, jams, natural mineral water, fast-frozen food, and substances that may cause allergies (e.g. alcohol).

A general requirement is that labels must not contain words, pictures, drawings, or health-related information that could mislead consumers regarding the product’s origin, quantity, or quality. The list of ingredients must state all food ingredients by the falling sequence in relation to their mass at the time of use in the production of the foodstuff.

**Nutritional Labeling Requirements**

The Rulebook on Labeling of Nutritional Value of Packaged Food (BiH Official Gazette # 85/08) prescribes nutritional value labeling for end consumer foods and foods for institutions and the service sector. Nutritional labeling is not mandatory unless the food has a nutritional statement on the label, the nutritional statement is used when the food is marketed, or the food has special nutritional purposes. The Rulebook provides instructions on the labeling method, calculation of energy value, and measurement units for energy and nutritional values. None of the existing laws or ordinances regulates organic labeling.

The Law on GMO says that food products that contain or are composed of GMO must be labeled as follows:

a. For packed products the label on the packaging should read: “This product contains GMO components” or “This product contains GM (name of organism).”

For products that are not packed the label should read “This product contains GMO components” or “This product contains GM (name of organism)” and should be placed directly on the product or by the product. The labeling threshold is set at 0.9% meaning that products must be labeled if they contain levels of GMO above the set threshold.

**Section III. Packaging and Container Regulations:**

Packaging requirements are subject to specific ordinances for each type of food. For example, packaging material for raw coffee packed in ½ kg units must weigh less than 50g per square meter. Packaging requirements for fresh seafood products are quite comprehensive and detailed. Regarding packaging materials, there are three new rulebooks (published in OG #42/10 and OG #21/11):

- Rulebook on Materials and Articles in Contact with Food;
- Rulebook on Plastic Materials and Articles in Contact with Food;
- Rulebook on Ceramic Articles in Contact with Food, and
- Rulebook on Active and Intelligent Materials and Articles in Contact with Food.

Exporters can obtain specific packaging information at the FAS office in Sarajevo (see Appendix II). However, in most of cases there are no special requirements concerning packaging material and container size. BiH consumers generally prefer larger packages at lower prices. There are no clear legal requirements regarding the collection and recycling of used packaging materials because the existing laws that regulate this issue have not been enforced yet.

**Section IV. Food Additives Regulations:**

Food additives are regulated by the new Rulebook on Requirements for Use of Additives in Food Intended for Human Consumption (BiH Official Gazette 83/08) which regulates general requirements for use of additives in food and labeling. According to this Rulebook, food additives are listed in 23 categories. The ordinance doesn’t apply to aromas used in food or to vitamins and minerals added to foods in order to improve their nutritional value.

In addition, there is the Rulebook on the Use of Food Additives Other than Colors and Sweeteners (BiH Official Gazette # 83/08) that regulates use of food additives other than colorants and sweeteners in food as a category of food additives in various types of food, and prescribes the specific purity criteria, as well as other requirements that have to be met in
production and sale.

The Rulebook on Use of Sweeteners in Food (BiH Official Gazette # 83/08), the Rulebook on Use of Colors in Food (BiH Official Gazette # 85/08), and the Rulebook Amending Rulebook on Use of Food Colors (BiH Official Gazette # 30/11) regulate use of food additives, colors, and sweeteners in food as a category of food additives in various types of food, and prescribes the specific purity criteria, as well as other requirements that have to be met in production and sale.

Section V. Pesticides and Other Contaminants:

In general, imported food products must comply with domestic rules.

The CODEX maximum residue limits (MRLs) are recognized for imported foodstuffs.

There is a specific ordinance on the residue limits for pesticides and other contaminants, (e.g. hormones, antibiotics and mycotoxins) that can be found in food (the ordinance on “Pesticides and Other Contaminants in Food” was inherited from the old Yugoslavia Official Gazette, No. 59/83, 79/87). According to the ordinance, pesticides are substances used for protection of agricultural products against diseases and pests. Pesticides and their maximum residue limits in food are listed in a special attachment. The list includes 232 different pesticides, their trade names, chemical names and maximum contents in milligrams per kilogram (mg/kg) of food. Products like spices and food additives can contain 10 times more pesticides than normally allowed, while tea can contain five times more pesticides. For concentrated and dehydrated products (e.g. milk powder, dried soups) the maximum quantities are calculated for the product that is ultimately consumed (e.g. liquid milk and soups). Food contaminants are listed as lead, cadmium, mercury, zinc, tin, cooper, arsenic, iron and other metals and nonmetals. The ordinance provides a table with maximum residue limits for 47 different foods (expressed in mg/kg).

In addition, there is the new Rulebook on Maximum Permitted Quantities of Contaminants in Food (BiH Official Gazette # 37/09) that stipulates MRLs for nitrates, mycotoxins, metals, dioxin, etc. in foods.

Also, for animal origin products, there is the new Rulebook on Maximum Permitted Quantities of Medicines and Pesticides in Products of Animal Origin (BiH Official Gazette # 06/09) that provides MRLs for various substances.

Hormones and antibiotics residues are generally not allowed in food products.

Maximum residue limits of mycotoxins are also regulated for grains, flour, legumes, beans, nuts, coffee, roasted cocoa and peanuts. The above-mentioned lists are available from the FAS office in Sarajevo (see Appendix II).

For import of pesticides, prior approvals must be obtained at the Entities’ Ministries of Agriculture for approved pesticides. The information on approved pesticides and required documents can be obtained from the following address:

For the F BiH:

Ministry of Agriculture, Water Management and Forestry
Phytosanitary Department
Titova 15
71 000 Sarajevo
Bosnia and Herzegovina
Contact person: Scepan Raguz and Mario Beus
Tel. +387 (33) 214 247
For the RS:
Ministry of Agriculture, Forestry and Water Management
Phytosanitary Department
Kralj Petra I Karadjordjevica 100
78000 Banja Luka
Contact person: Nikolina Cutura
Tel: +387 51 338 397, 338 398
Fax: +387 51 338 866
E-mail: mps@mps.vladars.net

The Plant Health Administration issues final import permits:

BiH Plant Health Administration
Radiceva 8
71000 Sarajevo
Contact person: Miljana Knezevic
Tel/fax: +387 33 211 693 and 212 387
E-mail: upravabihzzb@bih.net.ba

Section VI. Other Regulations and Requirements:
Upon an importer’s request, the State Veterinary Office (SVO) provides the specific requirements for the import of live animals and products of animal origin (for contact details see Appendix I). Those requirements are in accordance with the Office International des Epizooties (OIE) and with EU requirements. According to the Veterinary Law, import of foodstuffs, raw materials, products, animal feed, veterinary medicines and waste shall be authorized only if the establishment of origin complies with the prescribed conditions and are registered with the European Union. Exceptionally, the SVO may authorize import from other establishments, if it has been recognized that regulations, standards, production methods and supervision carried out by the exporting country are at least equivalent to the regulations of BiH and that at least equivalent consumer protection has been guaranteed in those countries. Exporting facilities need to register with the SVO for the first time they export to BiH.

Food products must be tested for microbe levels at laboratories within the Entities’ Institutes for Public Health (see Appendix II). The ordinance on “Microbiological Wholesomeness of Food” comes from the Yugoslavia Official Gazette, No. 43/83 and No. 43/89, and specifies the maximum content of different microorganisms in food products.

Because of European outbreaks of FMD, BSE, Classical Swine Fever, Bluetongue and Avian Influenza, the SVO has banned imports and transportation of domestic and wild ruminants and their products from a number of countries, as well as feed containing proteins of animal origin. The United States was not listed in any of the import bans, except for BSE; however, beef imports from the U.S. are allowed if certain requirements are met.

There are specific conditions for import of semen and embryos. These may be obtained from the SVO (see appendix I).

Certification and documentation: Live animals, meat and dairy products require veterinary certification, while fruits and vegetables require a phytosanitary certificate issued by the export country’s relevant authorities (e.g. USDA/APHIS).

Foods that are subject to veterinary and phytosanitary inspections can enter BiH only at certain border crossings including:
Orasje, Gradiska, Izacic, Gorica, Kamensko and Doljani (on the border with Croatia), Raca and Zvornik (on the border with Serbia) and the Sarajevo Airport. Importers should always inform the SVO or the relevant Ministry at the point of entry in order to allow them to fax import permits to the relevant border inspection post. Inspection services are much more expensive if done after regular working hours and on weekends and holidays.

**Section VII. Other Specific Standards:**

**Organic agriculture:** According to domestic agricultural experts, BiH has a good climate for organic farming. However, organic agriculture is at the beginning phase of development (700 hectares are registered for organic production) and there are no standards yet being enforced (a national Law on Organic Farming is being prepared). Consumers tend to think that almost all agricultural production is organic since production is more traditionally oriented, and the use of pesticides is lower than elsewhere in Europe. There are also few industrial polluters.

Genetically modified organisms (GMO): BiH lacks a detailed regulation on import and marketing of GM foods and therefore the import of GMOs is forbidden since November 2004, when the new Food Law was adopted (BiH Official Gazette # 50/04). The new Law on GMO that was passed in 2009 permits the importation of licensed GMOs. However, it is again a de facto ban because the approval procedure has yet to be defined, making entry impossible. BiH does not produce biotech crops and there are no regulations that govern approval and production of biotech products yet. Currently there are no biotechnology crops under development in BiH. Imported foods that contain soy, corn, or rice are often tested for GMO. Four laboratories have been authorized for biotech testing:

- Biotechnology Laboratory of the Agricultural Institute in Banja Luka;
- GMO Laboratory of the Federation Agro-Mediterranean Institute in Mostar;
- Laboratory for GMOs and Food of the Institute for Genetic Engineering and Biotechnology in Sarajevo; and
- GMO Laboratory of the Federation Agricultural Institute in Sarajevo.

**Veterinary drugs:** must be on the approved list of veterinary drugs. The list is available from the SVO (Appendix I).

Seeds and planting materials: Seeds can be imported only if the varieties are recognized in the country. The National List of Recognized Varieties (BiH OG #59/10) is available at the Plant Health Administration. If a variety is not on the list, importers can request its recognition from the Seeds Commission (request forms available at the Ministries of Agriculture, Law on recognition of agricultural varieties F BiH Official Gazette 31/00 and Law on Plant Protection RS Official Gazette 13/97).

The Metric system is used in BiH.

Live animals are subject to the ordinance on quarantine requirements for imported animals issued by the SVO. For ruminants, the required quarantine is 30 days, for poultry and pets 21 day, for semen and inseminated egg cells 14 days.

**Section VIII. Copyright and/or Trademark Laws:**

The Law on Industrial Property Rights (BiH Official Gazette No. 3/02) and the Law on Copyrights (BiH Official Gazette 7/02) protect trademarks and brand names. Domestic and foreign applications must be submitted to the BiH Institute for Intellectual Property (see Appendix II). However, according to research done by the U.S. Foreign Commercial Service, intellectual property rights (IPR) are often inadequately enforced and intellectual property, patents, copyrights and trademarks inadequately protected. BiH is not a signatory to the Trade-Related Aspects of IPR (TRIPS) agreement and insufficiently enforces key international agreements on IPR to which it is a party.
Section IX. Import Procedures:
Foreign exporters can export food products to BiH using a locally registered office or a local company/shipping agency registered for import activities. It is common for agents to help with food import regulations.

Prior import approvals and licenses are required for live animals and animal products and seeds and pesticides. For animals and certain animal products, the State Veterinary Office (SVO) provides prior approvals. For seeds, planting materials and pesticides the Entities’ agriculture ministries provide prior approvals. Forms are available at the SVO and the Ministries (see Appendix I). It is important to note that requirements for prior import approvals differ between the two Entities. All food products must be accompanied with standard documents that follow each shipment and by health certificates issued by relevant authorities of exporting countries (e.g. veterinary certificate for meat and meat products, phytosanitary certificates for fruits, vegetables, seeds etc.) and are subject to veterinary and phytosanitary inspections at border crossings and sanitary and market inspections at customs points.

Sanitary inspectors visually inspect all food for sanitary wholesomeness prior to customs clearance and take samples for laboratory tests (see Appendix II). Imported goods are held at the customs point until testing is complete.

Market inspectors issue quality certificates at inspection points (see Appendix I). Quality control inspections are done at the exporter/importer’s written request, which should be received at least 24 hours prior to the customs clearance. The request for quality control must be accompanied with basic documents that follow each shipment, translated into Bosnian/Croatian for the FBiH or into Serbian for the RS. The following information must be provided in the documents: type and name of product, country of origin, exporter’s name, manufacturer’s name, type and number of transport means, port of loading and unloading, total pieces, packaging unit, gross and net weigh and product’s quality basic data. If the same product is imported again, and it has been tested within 90 days, only a visual check up is done. Both Entities have officially recognized laboratories to test imported food products (Appendix II).

If a market inspector rejects an importer’s request, goods are stored until the procedure is complete - the inspector can order the return or destruction of goods if necessary at the importer’s expense, or can order certain changes prior to customs clearance.

Appendix I. Government Regulatory Agency Contacts:
1. Imports of live animals and products, veterinary drugs:

   State Veterinary Office
   Radiceva 8/I
   7100 Sarajevo
   Bosnia and Herzegovina

Author Defined:
"The Office of Agricultural Affairs of the USDA/Foreign Agricultural Service in Sarajevo, Bosnia and Herzegovina has prepared this report for U.S. exporters of domestic food and agricultural products. While every possible care was taken in the preparation of this report, information provided may not be completely accurate either because policies have changed since its preparation, or because clear and consistent information about these policies was not available. It is highly recommended that U.S. exporters verify the full set of import requirements with their foreign customers, who are normally
best equipped to research such matters with local authorities, before any goods are shipped. FINAL IMPORT APPROVAL OF ANY PRODUCT IS SUBJECT TO THE IMPORTING COUNTRY’S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY."
