**Retail Foods 2018**

Report Categories:
Retail Foods

Approved By:
Robin Gray, Agricultural Attaché

Prepared By:
Mariia Sorokina, Agricultural Assistant

Report Highlights:

Ukraine is a developing country with market-oriented economy. The retail food market faces slow growth, although part of the growth was due inflationary pressures rather than exclusively from volume sales. Ukrainian citizens spend more than 50 percent of their income on food and beverages. In general, consumers choose to shop at supermarkets over traditional markets due to competitive prices and longer hours of operation. Consumers increased the frequency of discounters’ visits: from 9 times a month in 2016 to 11 times a month in 2017, but supermarkets remain the most important shopping channel. Over 55 percent of consumers consider supermarkets to be the main type of stores to do their grocery shopping. Health-conscious consumption is seen to be a new trend: more customers are looking for organic, gluten-free, lactose-free, and low sugar content products.
Market Fact Sheet: Ukraine

Executive Summary

Ukraine is a country with a lower middle income and with market-oriented economy. With rich farmland, a well-developed industrial base, a highly trained labor force of 17.3 million, and an adequate education system, Ukraine has the potential to become a major European economy and it is one of the world’s largest grain exporters. In 2017, Ukrainian GDP reached $112.9 billion, positioning the country as the 60th economy in the world. It is the largest country located entirely in Europe with a population of 42.3 million. Currently, 51.4 percent of household expenditures are dedicated to food products. In 2017, imports of agricultural products reached $4.29 billion, an increase of 11 percent compared to 2016.

Imports of Consumer-Oriented Products

In 2017, Ukraine imported consumer-oriented agricultural products worth $2.1 billion; just under half (45 percent) of these originated from EU member states.

Food Processing Industry

Sales of domestically processed food and beverages totaled $20.62 billion in 2017, with the food processing industry responsible for 20.8 percent of total manufacturing. Small and medium size enterprises dominate the market, a few large processors are responsible for the majority of sales in the beer, soft drinks, hard liquors, condiments and confectionary industries.

Food Retail Industry

German food retail sales reached USD 230 billion in 2017. Independent stores continue to face strong competition from modern grocery retailers. Online food sales are showing slow growth. Ukrainian consumers are willing to try foods from other countries but expect quality products at a competitive price. Major multinational and local companies will continue to expand throughout Ukraine, improving their online platforms to capture more consumers via e-commerce and mobile applications to offer discounts tailored to each individual consumer.

Strengths/Weaknesses/Opportunities/Challenges

SECTION I. MARKET SUMMARY

Ukraine is a country in the middle of a political and economic transition. Despite an economic downturn and a drop in sales in 2014, the market rebounded strongly in 2018. This recovery has been driven by economic stabilization and disposable income growth. For a general overview of Ukrainian economics, politics, legal and regulatory systems refer to the 2017 Investment Climate Statement and Ukraine Country Commercial Guide published by the U.S. Department of State and the U.S. Department of Commerce, respectively.

Ukraine’s food and agricultural product imports from the world increased 20.7 percent during the period September 2017 to September 2018. In 2017, imports of agricultural products reached U.S. $4.29 billion, an increase of 10.5 percent compared to 2016, while imports of consumer-oriented agricultural products totaled U.S. $1.993 billion in 2017, an increase of 13 percent compared to 2016.

After a dramatic decrease in Ukrainian food and agricultural product imports in 2014, the retail food market is now demonstrating slow, but steady, growth. Ukrainian citizens spend over half of their income on food products with staple foods (bread, milk and dairy, confectionary, fruits and vegetables) taking the largest share of family incomes. During the economic crisis of 2014 and 2015 there were significant U.S. dollar to Ukrainian hryvna exchange rate fluctuations. Since 2016, the exchange rate has been relatively stable. Currently, the economy continues to grow at a moderate pace. However, in 2019 Ukraine has two scheduled elections – Presidential and Rada (Ukraine’s Parliament) and there are concerns that economic progress may be slowed during this period.

</table>

Retail food channels in Ukraine can be divided into 7 categories: small grocery stores, convenience stores, supermarkets, hypermarkets, gas marts, kiosks, and open-air markets. The retail environment in Ukraine is increasingly competitive. The retail channels are:

- **Small Grocery Store** – A retail outlet of less than 120 m² floor space. It may have either a self-service layout or be “traditional” with over the counter trade. A typical grocery store sells a limited line of high-convenience items including some perishable foods.
- **Convenience Store** – a self-service store of 120-399 m² floor space. These stores are often located in bedroom communities and within proximity to urban transport hubs. The majority of convenience stores are operated by

---

1 HS code 1-24 – Global Trade Atlas
2 Consumer Oriented Agriculture – Global Trade Atlas
large retail companies which often also run chains of other formats. Convenience stores sell a line of dry groceries, canned goods or nonfood items as well as perishable items.

- **Supermarkets** – Self-service grocery store offering a full line of groceries, meat, and produce. Three large supermarket chains dominate Ukrainian market. Large supermarket facilities are generally located in the outskirts of the major cities near major highways, in order to service multiple geographic locations. Smaller neighborhood supermarkets located in cities tend to carry many of the same goods at higher prices. Most supermarkets are open 7 days a week, some offering 24/7 service. Large food retail chains have their own purchasing or importing division to handle food imports. Major supermarkets are now importing directly from foreign suppliers to reduce costs. One of the leading Ukrainian retailers, Fozzy Group, operates several different formats: hypermarket Fozzy for wholesale and retail, supermarkets chain Silpo and Le Silpo (high-end segment), and convenience stores Fora and Bumi-Market. Fozzy Group are very strong on their private label as they developed several of their own brands from covering low-tier, middle-tier and high-tier price categories: Premiya, Premiya Select, Povna Charka, Zelena Krayina, Protex, EXTRA!. Fozzy Group also organizes their own annual craft beer festival BeerMaster and wine festival.

- **Hypermarkets** - A very large food and general merchandise store with over 2500 m² of selling space. The food-to-general merchandise sales ratio is close to 60/40. The biggest players which are present on the Ukrainian market are foreign investors such as Metro (Germany) and Auchan (France).

- **Gas Mart** – a small outlet located at a gas station offering a limited number of dry groceries. Although snacks generate the majority of sales, many have cold boxes offering sandwiches, ice-cream and similar convenience foods.

- **Kiosk** – a small roofed stall ranging from just 1 to 30m² of selling space. Most of them are located at open-air markets, bus stops and underground pedestrian passages in the city. Kiosks usually specialize in one product grouping, ranging from tobacco products to frozen foods, bread, and even a seller’s proprietary product line.

- **Open-Air Market** – a plot of land with open-air or sheltered tables, stalls and kiosks. Similarly to supermarkets, open-air markets are full-line, but low technology point of sales. Products are often sold without refrigeration or are defrosted. Most open-air markets have limited working hours and are typically used for sales of locally produced products. In small towns or villages where retail chains are not very well presented, open-air markets remain popular. Naturally, in larger cities the share of retail sales made in open-air markets is smaller.

- **Specialty supermarkets** – high-end, self-service grocery stores offering a full line of high quality groceries, meat, and produce with a large portion of the products certified organic. Wine Bureau owns three GoodWine stores which stand out from any other regular supermarkets in Ukraine, making organic, biodynamic, healthy, sustainable, and traceable food a priority. Wine Bureau imports around 4,000 types of wine from all over the world and around 1,000 spirits for retail sale in their GoodWine stores and for B2B clients. Wine Bureau’s sales are showing stable growth. GoodWine already have their own wine bar, coffee shop, restaurant, sushi restaurant, bakery – all inside their store, and they are planning to expand. Besides organizing two annual festivals - Kyiv Wine in summer and Whisky Dram in fall, – GoodWine organizes various lectures, tastings, and master-classes.

It is difficult to estimate sales turnover in the open-air markets, as sales are not officially registered. In Kyiv, the official retail-to-open air market ratio is roughly 70/30. Overall, in Ukraine it could be closer to a 50/50 ratio. Although many consumers are very price sensitive, some are willing to pay extra for high quality and healthy (organic) products.

**Trends in Distribution Channels**

- E-commerce in Ukraine is at its early stage of development and at this point, internet retail sales do not have a substantial share of the market. According to Nielsen Connected Commerce 2018, online purchases of fresh foods and packaged foods in Ukraine are 3 percent and 6 percent while in the world they are 26 and 30 percent. The leader in that segment would be online service Zakaz.ua. It is an internet-based platform, which provides traditional retailers such as Auchan, Novus, Metro, and Fozzy a space for online sales. Several retail chains such as Furshet and Tavriya B have their own online-stores, while ATB and Silpo, the top Ukrainian retail chains, do not have their own online platforms yet. French retailer Auchan, started working on their own online platform shop.auchan.ua where besides delivery they offer “click&collect” service: customers order groceries online; Auchan shoppers build the order and prepare it for pickup.

- Supermarkets are gaining market share over small stores. In the past, large retail food chains focused on expansion through acquisitions. Multiple small retail chains sold to larger retail chains as they became less profitable. In an increasingly competitive market, retailers are seeking efficiencies and opportunities to gain market share.
Acquisition of competitors creates economies of scale and increases efficiencies.

- Convenience stores are growing in number, demonstrating steady growth of 22 percent in 2017. Consumption of bare necessities grocery goods is what drives this growth. Ukrainian households are shrinking and consumers choose to shop at a local convenience store to save time and money spent on fuel. As such, Ukrainian consumers with lower-middle and middle incomes are buying the goods of immediate daily necessity closer to their homes, making convenience stores a logical option. Big international players see potential in developing a separate channel of their stores. For instance, Auchan, launched its first convenience store “My Auchan” in July 2018. According to consumer behavior experts, the number of convenience stores is expected to grow. However, it can be slightly diminished due to the economic situation in the country. As disposable income grows, more consumers will demand a greater selection of goods, which would motivate them to do their shopping in stores that offer bigger variety, such as supermarkets or hypermarkets.

Trends in Services by Retailers

- Ukrainian consumers continue to be price sensitive. For example, retailer chain "ATB" has increased its turnover by 37 percent in 2017 compared to 2016. But this retailer does not provide a possibility to place online orders. Its benefit - low prices. For the most part, Ukrainians choose the priority of a low price over the convenience of an online order. But as soon as there is a steady upward trend in the level of disposable incomes of the population, it is highly likely that an increase in the average share of food sales through an online order can be predicted, up to 20 percent of the total turnover of the food market.

- As Ukrainian customer’s interest in organic and healthy food is increasing, local supermarkets are providing more options for these categories. Increasingly, Ukrainian consumers, especially in the biggest cities are willing to pay a premium for organic food items. As a result, supermarkets are giving greater priority to healthy and organic foods. Supermarkets are starting to group bio (organic), dietary, gluten-free, lactose-free, diabetic, and farm products into “healthy eating” group and some stores would open special healthy sections unlike in the past when these products were in no way distinguished. Organic products became more widely available throughout modern retail outlets and the variety of healthy products is expanding. There are a few specialty health store stores such as Eco-lavka and GoodWine (detailed description is under “Specialty Supermarkets”, page 4).

- Sales in private label products are growing. More supermarket chains are offering private label branded products. The share of private label products in one of Ukraine’s largest retailer ATB accounted for 23.3 percent of all their retail sales in 2017. The large chains such as Silpo and Auchan which offer private label products are importing directly not only to access prices that are more competitive, but also to position these products as of a higher quality. Ukrainian retailers started developing private labels much later than European ones and, therefore, there is a potential for growth. Ukrainian stores still need to work on customer’s trust towards private label.

- Fruits and vegetables remain a staple in the Ukrainian diet. Even with growth in other retail sectors, supermarkets are still dedicating a large portion of their sales area to fruits and vegetables. Most are grown locally, with exotic fruit imports, especially tangerines during winter holiday season.

Ukraine is in the process of adopting new legislation on organic certification.
"Only 10 years ago the first domestic organic products began to appear on the shelves of Ukrainian shops. Today the volume of the internal market of organic products is growing rapidly, and the range of products is expanding significantly. According to the results of 2017, we exported Ukrainian organic products to more than 40 countries of the world ", - Olga Trofimtseva, the Deputy Minister of Agrarian Policy and Food of Ukraine on European Integration, emphasized. She noted that today in Ukraine there is an increasing number of certified organic producers of various products, including processed foods, of which 4 are producers of organic dairy products, 1 - meat products, 15 - cereals, 11 - oils, 3 - producers of organic spices, etc.

However, currently the government of Ukraine is in the middle of finalizing the official process to certify organic claims. For more information on Ukraine’s organic certification please read Section VI: Other Specific Standards of FAIRS Narrative.

Table 1: U.S. Supplier’s Advantages and Challenges Facing the Ukrainian Retail Food Sector
Advantages

- Ukrainian market follows U.S. trends in food and the number of consumers willing to pay higher prices for good quality food and agricultural products is growing.

- As Ukraine is in the process of EU approximation, it is a good opportunity for U.S. to collaborate with Ukraine and EU to advocate for potential changes to the EU proposal on MRLs.

- Products certified as being manufactured under Good Manufacturing Practices (GMP) or HACCP will have greater ease of access to the Ukrainian market.

- U.S. products offer high quality.

Challenges

- Cost of transportation from the US is high, especially given volumes shipped.

- Ukraine is in the process of EU approximation and is in the process of adopting a number of EU directives and regulations, which may contradict internationally accepted scientific justification and will result in market restrictions, market closure of traditional, or potential US exports to Ukraine.

- Certificates, which were negotiated between Ukraine and the US, might become obsolete due to changes in SPS standards and Ukraine’s attempts to negotiate EU-like certificates that introduce multiple TBTs.

- Ukraine is to establish the high anti-corruption court in 2019. However, currently there are limited means for fighting corruption, which deters investors and foreign companies from signing new contracts with Ukrainian importers.

SECTION II: ROAD MAP FOR MARKET ENTRY

Entry Strategy

U.S. exporters should review FAS Kyiv policy and market reports and here Food and Agricultural Import Regulations and Standards - Narrative_Kiev_Ukraine_1-5-2018.

Find a Local Partner

Exporters should establish business relationships with reliable, experienced and professional importers and distributors. These will offer advice on issues related to the product positioning, packaging, labeling, and custom clearance procedures. Face-to-face meetings or visits of U.S. firms to Ukrainian facilities will build relationships and create opportunities to explore business opportunities firsthand.

Exporters able to supply sufficient quantities should consider approaching large Ukrainian food retail chains. Large supermarket chains have their own purchasing and importing divisions to handle food imports and most of them try to work directly with exporting companies. U.S. suppliers should first contact the purchasing or importing divisions of these large food chains, especially for new-to-market food products as they have the most experience with branding and distribution. FAS Kyiv has a list of local importers and can help with contact information. U.S. exporters should consider the price sensitivity of their customers, product requirements, purchasing policies, and purchase volumes.

Regulations and Market Requirements

Ukrainian regulations, standards and market requirements have to be considered (see, FAIRS - Ukraine Country Report).

Market Structure

Large supermarket chains import directly, as well as buy from importers or wholesalers. Others usually buy only through importers or wholesalers.

Company Profiles & Top Ukraine’s Retailers

In September 2018 the Ukrainian Retail Association organized and held the second Retail & Development Business Awards event in Kyiv. See The best Ukrainian “Retailers of the Year” and Distribution and Sales Channels in Ukraine published by the Ukrainian Retail Association and U.S. Department of Commerce, respectively.

SECTION III: COMPETITION

The main competitors for U.S. suppliers are EU member states. The U.S. industry’s advantages include a good reputation for consistent quality and stable supply. The main advantages of competitors are proximity and price. For more information, please see Table 2: Ukraine’s Top Ten Imported Consumer-Oriented Product Groups Table, Table 3: Top Ten Ukraine’s Agricultural Products Imported from the World in the attachments.
In addition to following the healthy-food trend, several years ago Ukrainian consumers also picked-up on the craft beer. This trend has boosted beer imports up to US$ 39.8 million (as of September 2018), a 47 percent increase from YTD, September 2017 imports. For more information, please see Table 4: Top Fifteen Ukraine’s Beer Imported from the World in the attachments.

**SECTION IV: BEST PRODUCT PROSPECTS CATEGORIES**

Ukraine is a good market for U.S. food exports, such as frozen fish and seafood, dried fruits, nuts, cereal products, snacks, beef, food ingredients, and other prepared food products.

Demand for healthy or natural foods is increasing, particularly for organic food. Niche products that target a specific health issue like diabetes or celiac disease (gluten-free food) are experiencing growth in demand, as well as vegetarian and vegan products. Additionally there has been significant growth in demand for high quality, higher-end food products. For more information, please see Table 5: Top Ten Ukraine’s Agricultural Products Imported from the United States in the attachments.
