Oilseeds: World Markets and Trade

India's Shifting Vegetable Oil Suppliers

In marketing year 2025/26 (Oct-Sep), the world's largest vegetable oil importer no longer has the world's largest vegetable oil exporter as its main trading partner. For decades, Indonesia commanded the largest share of the Indian import market for vegetable oil. However, Argentina and Malaysia have surged past and displaced Indonesia to third place, with other countries including Brazil and Thailand also gaining market share in India.

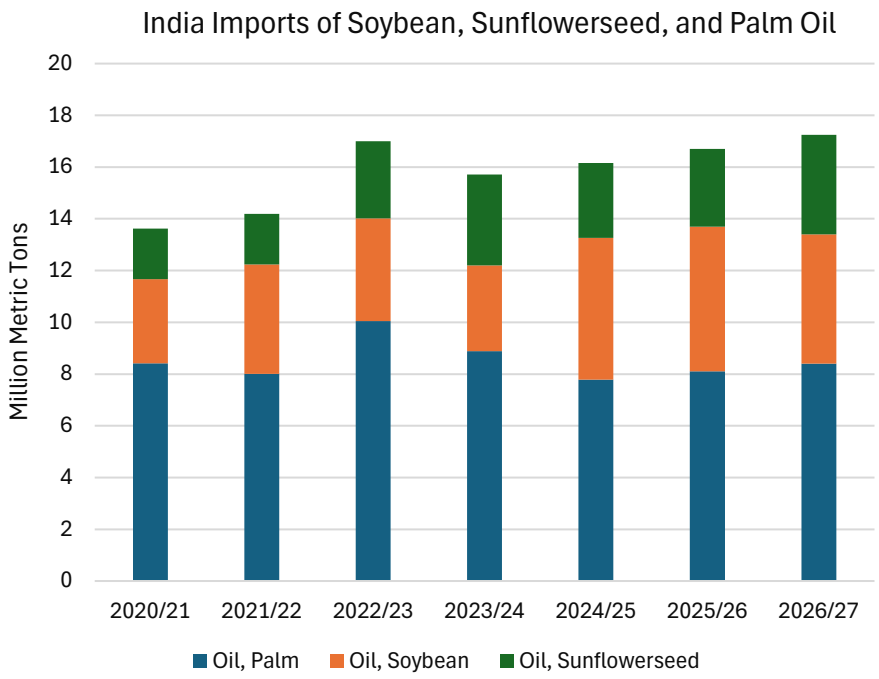

Palm oil is India's most imported oil, and until recently, Indonesia has been the historic preeminent vegetable oil supplier to India due to its dominance in the global palm oil trade. Indonesia's trade with India has been declining since 2022/23 due to the rapid implementation of its increasingly large biodiesel blending mandates, which has resulted in a larger palm oil domestic consumption. In 2025/26, Malaysia and Thailand have increased shipments of palm oil to India, both aided by stronger production than the year prior and price competitiveness against Indonesian origin.

India Combined Imports of Soybean Oil, Sunflowerseed Oil, and Palm Oil By Origin

India modestly increased sunflowerseed oil imports in 2025/26. This is due to Argentina more than making up for reductions in imports from Ukraine and Russia. In 2025/26, Ukraine had a smaller sunflowerseed crop, while shipments from Russia have slowed in recent months. Since July 2026, Argentina has been the dominant sunflowerseed oil supplier to India. Competitive Argentine prices have led India to double sunflowerseed oil purchases compared to the previous marketing year. In an effort to shield consumers from higher sunflowerseed oil prices, the Government of India lowered the duty on crude sunflowerseed oil from 5 to zero percent effective September 24, 2026.

Argentina became India's largest vegetable oil supplier this year fueled by demand for soybean oil. Recent cuts to export taxes increased the competitiveness of Argentine soybean oil. At the same time, new suppliers have emerged, including China and Nepal. Due to record crush, China is now the largest soybean oil exporter in the world outside of South America and an increasingly important supplier to India. Nepal has also boosted its market share in India, capitalizing on duty-free refined oil access under the South Asian Free Trade Agreement. Much of the soybean oil imported from Nepal is Argentine soybean oil refined in Nepal and subsequently exported under preferential tariff treatment.

In 2026/27, India is expected to expand vegetable oil imports to record levels. Imports of sunflowerseed oil are expected to increase, consistent with higher global availability of sunflowerseed. Palm oil imports are expected to increase, but at a slower pace given available global supplies. Soybean oil imports are expected to decline, consistent with lower exportable supplies of soybean oil in 2026/27.

OVERVIEW 2026/27

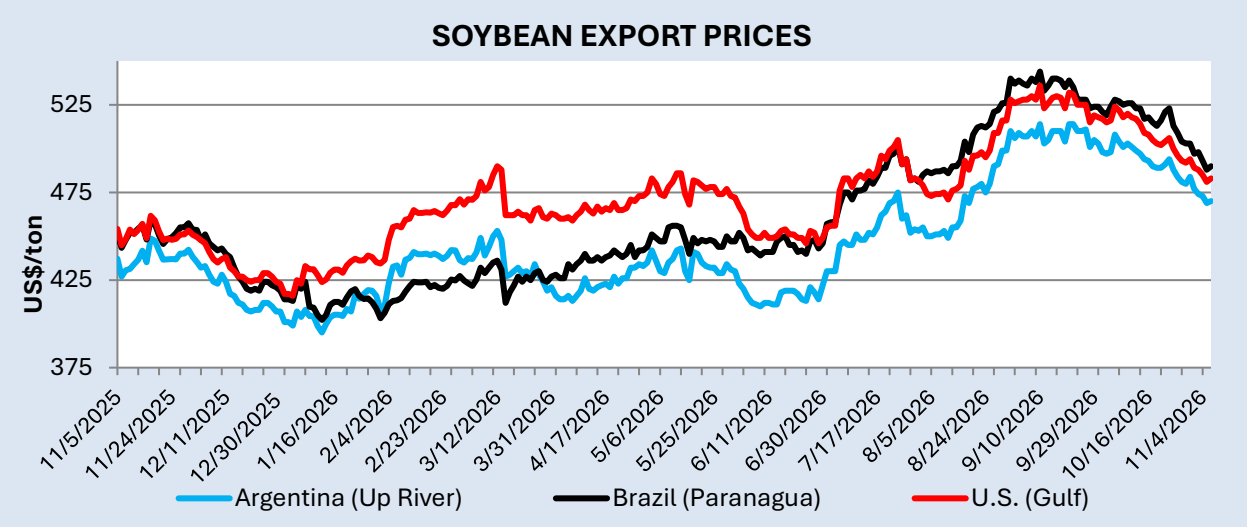

Global oilseed production is nearly unchanged this month on reduced Russia sunflowerseed and Ukraine soybean production, offsetting higher U.S. soybeans and Australia rapeseed. Global oilseed trade is raised on higher U.S. and Argentina soybeans and Australia rapeseed, despite lower Ukraine soybean exports. Global crush is up slightly this month on higher European Union rapeseed and Colombia soybean crushing despite lower Russia sunflowerseed crushing. Global oilseed carryout is down with lower Argentina and U.S. soybean stocks more than offsetting higher Australia and European Union rapeseed stocks. Global protein meal trade is unchanged as reduced Russia sunflowerseed meal and Ukraine soybean meal exports offset higher Brazil soybean meal exports. Global vegetable oil trade is lowered on reduced Russia sunflowerseed oil and Canada rapeseed oil exports, more than offsetting higher Brazil soybean oil exports. Global vegetable oil carryout is lowered on reduced Brazil soybean oil and Indonesia palm oil stocks, more than offsetting higher Malaysia palm oil stocks.

The projected U.S. season-average farm price for soybeans is raised 10 cents to $12.10 per bushel.

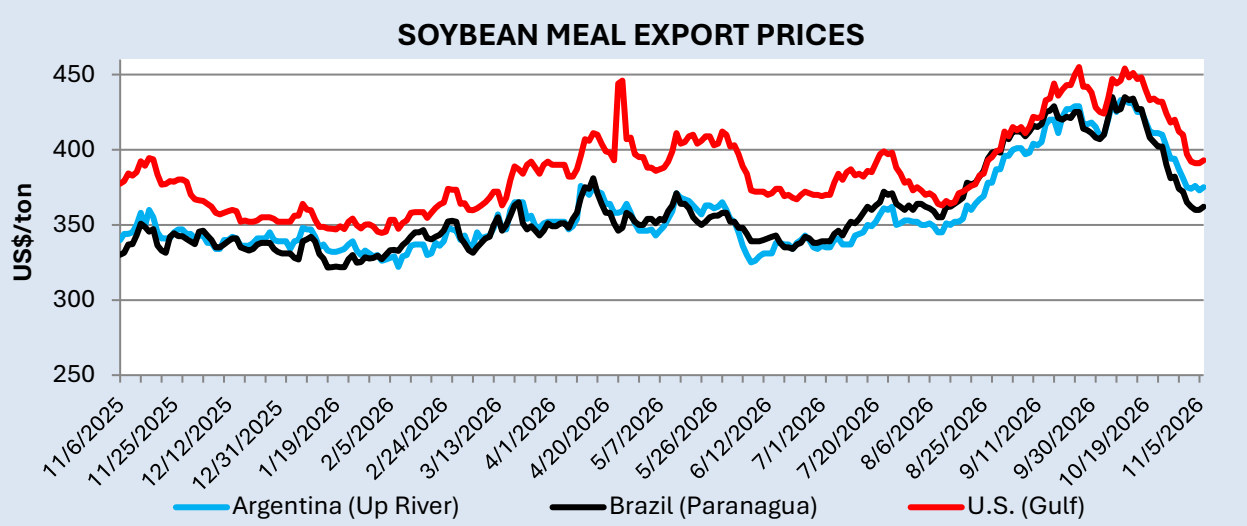

EXPORT PRICES

Soybean export prices steadily declined over the last month as the U.S. harvest and Brazil planting progressed without major issues. Brazil soybeans maintained a seasonal price premium over U.S.-origin, though the gap narrowed somewhat on a depreciating real following Brazil's runoff elections in late October. Soybean meal export prices fell sharply for major exporters, with U.S. soybean meal dropping from a peak of $450/ton in mid-October to below $400/ton during the first week of November. This decline followed harvest pressure on soybeans and acceleration of U.S. crushing.

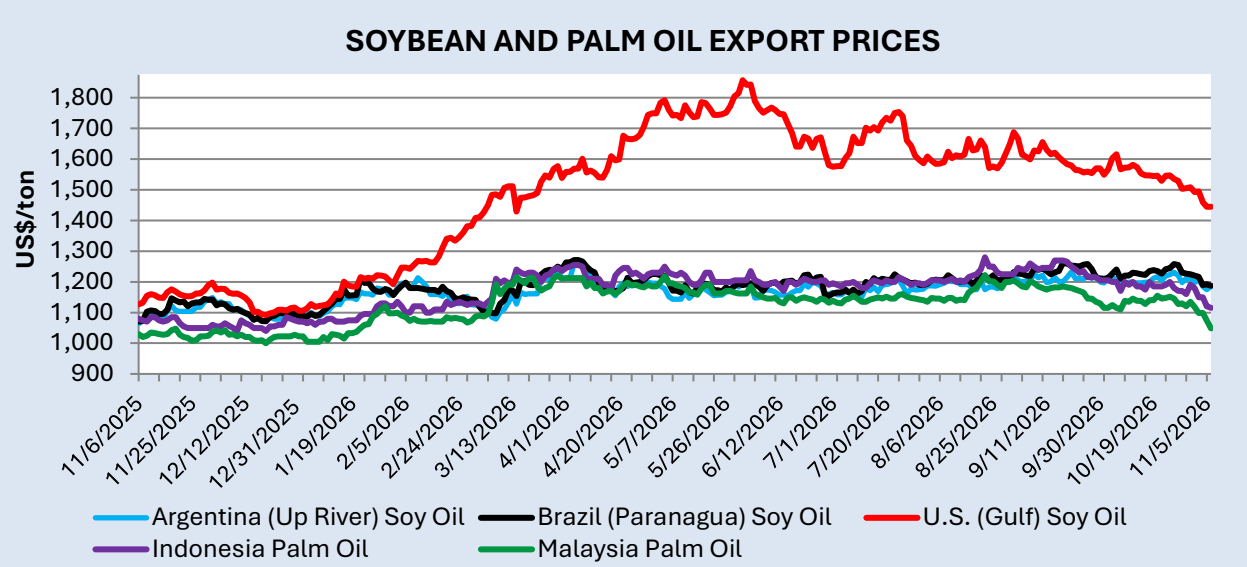

U.S. soybean oil export prices declined throughout the month on soybean harvest pressure, accelerated crushing, and falling petroleum prices in early November which put downward pressure on prices of soybean and palm oil for all exporters. Brazil and Argentina soybean oil continued to trade at a discount to U.S. oil and were largely rangebound before dipping in late October following the depreciation of the real. Indonesia and Malaysia palm oil export prices both remained below soybean oil over the month and dropped sharply in early November on reports of large October palm oil stocks in Malaysia.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (https://apps.fas.usda.gov/psdonline/): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
