

# Oilseeds: World Markets and Trade

## Oilseeds Output and Trade Accelerates in 2026/27

Global Oilseed Production and Consumption

### 2026/27 GLOBAL OILSEED OUTLOOK

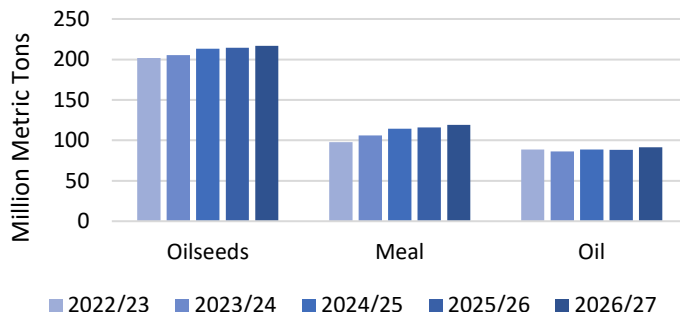

**Global oilseed production** in 2026/27 is forecast at a record 718 million metric tons, up 3 percent compared to the 2025/26 marketing year as strong demand for vegetable oil incentivizes greater planting. Production of soybeans, sunflowerseed, and rapeseed are all expected to reach new highs. Area expansion in the world’s largest soybean producing countries is the largest contributor to oilseed production growth. Global soybean production is forecast to rise by 14 million tons to 442 million. U.S. production, expected to reach nearly 121 million tons, accounts for 5 million of this increase. A 186-million-ton Brazil crop adds 6 million, while a 50-million-ton crop for Argentina adds an additional 2 million to global soybean production over 2025/26. Global sunflowerseed production is forecast at an all-time high of 62 million tons, up 7 million, on improved yields in the Black Sea region and area growth in all major producing countries. Russia (19 million tons) and Argentina (8 million tons) are expected to set new production highs, while production in Ukraine (14 million tons) is expected to recover by 23 percent after a decade’s low crop in 2025/26. Global rapeseed production is forecast to reach a record 97 million tons, up 1 million, on increased area in many major producing countries. India (12 million tons) and Russia (6 million) rapeseed production are expected to reach new records on continued area growth, while European Union production is anticipated to hit a 10-year high of 21 million tons. Canada rapeseed production is forecast unchanged at 22 million, with area growth offset by a reduction from strong yields in 2025/26.

**Global oilseed crushing** is forecast to rise by 4 percent in 2026/27 to a record 607 million tons as higher production enables higher crushing of soybean, sunflowerseed, and rapeseed. The largest growth is for Brazil soybeans – up 4 million tons to 65 million – and the United States – up 3 million tons to 75 million – as Brazil increases crushing capacity to utilize ever larger crops, and the United States crushes to meet growing domestic biofuel demand. China soybean crushing is forecast up by 2 million tons to 110 million

to meet growing feed demand, while Ukraine, European Union, and Russia sunflowerseed crushing are each up 2 million tons due to production growth.

**Global oilseed trade** is forecast to grow by 1 percent to a record 217 million in 2026/27. Soybean exports are up 1 percent to 189 million, driven by soybean exports from the United States and Brazil. Both are up 3 million tons from 2025/26 and are partly offset by a combined 3-million-ton decline for Argentina and Paraguay. Exports of sunflowerseed are up 3 percent to 4 million tons, though most growth for exports is in meal and oil rather than seed. Exports of rapeseed are up 2 percent to 19 million tons on gains for Canada and Ukraine despite a reduction for Australia.

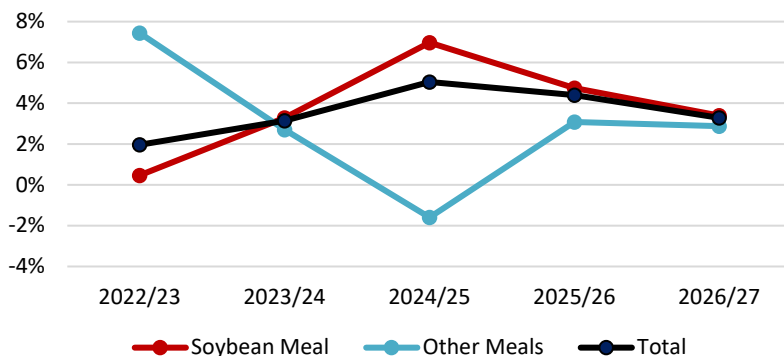

Global Oilseed & Product Exports

**Global oilseed stocks** are forecast up slightly to a record 147 million tons in 2026/27, largely due to supply recovery for sunflowerseed. Robust global oilseed consumption is expected to limit stocks growth. Global soybean stocks are flat at 125 million tons.

**Global oilseed meal trade<sup>1</sup>** is forecast up 6 percent to an all-time high of 119 million tons in 2026/27. The United States (20 million tons) and Brazil (27 million) are both expected to reach historically high soybean meal exports due to increased crushing, pushing total soybean meal exports up 5 percent to 88 million tons on competitive prices and robust demand for feed. Sunflowerseed meal exports are expected to expand by 20 percent to 10 million tons on rebounding supplies in Ukraine, Russia, and the European Union.

Global Meal Consumption Growth (Soybean Meal Equivalent)

**Global oilseed meal consumption** is forecast up 3 percent to a record 405 million tons in 2026/27 with growth expected in most countries to support growing demand for feed. Global oilseed meal consumption on a soybean meal equivalent (SME) basis is also forecast up 3 percent. The proportions of global oilseed meal consumption on an SME basis are unchanged at 79 percent soybean meal,

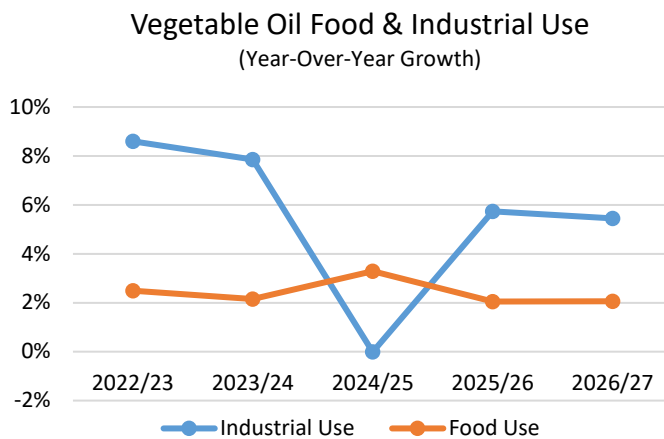

10 percent rapeseed meal, and 4 percent sunflowerseed meal. The largest consumption volume growth is expected for China, up 3 percent SME basis, on increased soybean and sunflowerseed meal

<sup>1</sup> Includes copra, cottonseed, palm kernel, peanut, rapeseed, soybean, and sunflowerseed meals.

consumption. Brazil, Vietnam, the United States, the European Union, and India are also forecast to have significant gains in consumption.

**Global vegetable oil trade** is forecast up 4 percent to a record 92 million tons, largely driven by sunflowerseed oil export growth for Ukraine, Russia, and Turkey. Total sunflowerseed oil exports are expected to rise 16 percent to 16 million tons, while rapeseed oil exports are expected to grow 8 percent to 9 million, and soybean oil exports are expected to grow 2 percent to 14 million tons. Palm oil exports are unchanged at 46 million tons.

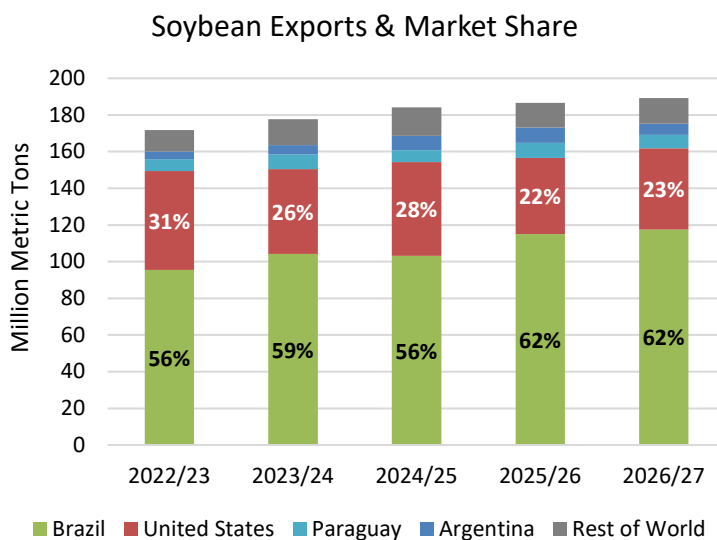

**Global vegetable oil consumption** is forecast up 3 percent to a record 238 million tons in 2026/27. Consumption growth is expected to be driven by industrial usage, up 5 percent to 68 million largely on biofuel policy. This is primarily due to a 32-percent rise in U.S. industrial consumption of soybean and rapeseed oil driven by biofuel production. Food use is expected to rise by 2 percent to 168 million tons, following recent trend. Sunflowerseed oil food use is forecast up 13 percent to 21 million tons due to recovery in supplies, while palm (51 million tons) and rapeseed oil (26 million tons) are expected to grow 1 percent each. Food use for soybean oil is unchanged at 54 million tons due to higher availability of alternative vegetable oils and increased demand for industrial usage.

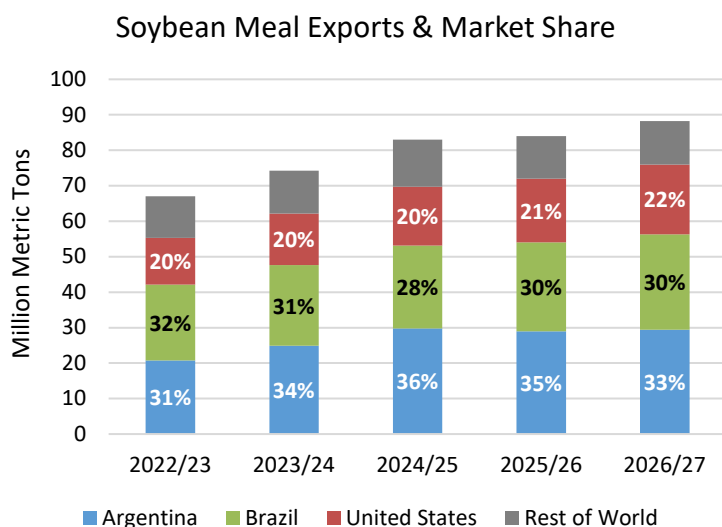

## 2026/27 COMMODITY OUTLOOKS

### SOYBEANS

Global soybean production in 2026/27 is forecast at a new record, with larger crops in the United States, Brazil, and Argentina driven by area expansion and trend yields. U.S. production is expected to reach the highest level since 2021/22, while Brazil production sets its third consecutive record. Paraguay is the only major producer with declining production, down from last year's yield-driven all-time-high crop. Global soybean exports are also forecast at record levels on growth for the United States and Brazil, more than offsetting reduced Argentina exports due to resumption

of export taxes after last year’s temporary reductions. Imports are up for China, Turkey, Pakistan, Vietnam, and Egypt, largely on growing feed demand and expanded capacity of domestic crushing facilities. Argentina soybean imports are expected to decline on increased availability of domestic soybeans for crushing and lower Paraguay exports. European Union imports are also expected to fall as crushing shifts toward rapeseed, and sunflower and soybean meal imports rise. Global soybean ending stocks are forecast to be unchanged as growing crush capacity and robust global feed and oil demand are expected to fully utilize growing production.

Global soybean crushing is forecast to surge, especially in major soybean producing countries. U.S. crush is expected to reach unprecedented levels, driven by domestic demand for soybean oil as feedstock for biofuel production. Brazil crush is expected to reach a new high as growing capacity is utilized to process the record 2026/27 crop. Argentina crush is also expected to rebound. Soybean meal exports are forecast to jump due to expanding crushing in these three countries. Soybean meal imports are expected to grow in most markets due to the

increased exportable supplies from major producers, led by the European Union, Indonesia, Mexico, and Vietnam on strong feed demand. Soybean oil exports are up slightly. Growing Brazil and Argentina exports more than offset a decline for the United States as more U.S. soybean oil is consumed domestically.

Global soybean meal consumption is forecast higher, reflecting robust feed demand expected to require larger volumes of all major oilseed meals in 2026/27. China, Brazil, Vietnam, Egypt, and the United States have the highest growth expectations for soybean meal. Global soybean meal stocks are forecast to expand proportionately with rising global soybean meal consumption. Global soybean oil consumption is expected to be higher, with nearly all growth attributable to increased industrial consumption as food use remains flat. Higher U.S. and Brazil soybean oil consumption are the main drivers due to higher industrial consumption, while China has the largest surge for food use. Soybean oil ending stocks are forecast to rise.

## **RAPSEED**

Global rapeseed production in 2026/27 is forecast at record levels on the highest area estimate to date. Canada is expected to remain the largest producer with runner-up EU production forecast at a 10-year high. Australia production is expected to decline on return to trend-line yields. Rapeseed crush is expected at another historical high with Canada, Ukraine, Russia, and India all forecast at new records. Rapeseed exports are expected to rise, largely on increased Canada exports. Global ending stocks are expected to rise in 2026/27 as the continued growth in global production outstrips consumption.

Rapeseed meal and oil exports are expected at new records on increased Canada and Ukraine exports. Rapeseed meal imports by China are expected to stay flat year over year as normalized rapeseed trade with Canada and Australia will support China’s domestic rapeseed crushing. Industrial usage in the United States is expected to surge with imported rapeseed oil expected to complement increased domestic production of oil. Canada rapeseed oil exports are expected at a new high, fueled by the record crush and U.S. demand for North American vegetable oils.

## SUNFLOWERSEED

Global sunflowerseed production is expected to reach new heights in 2026/27 on improved Black Sea yields and area growth in all major producing countries. Ukraine production is seen recovering from a decade’s low in 2025/26, while Russia and Argentina continue to increase area and reach new production records. Sunflowerseed production is also expected to rebound in the European Union following 2 years of below-average yields driven by dry weather.

Global sunflowerseed crushing is forecast to expand in line with growing production, enabling unprecedented exports of both sunflowerseed oil and meal. Export growth for both products is driven by Ukraine and Russia due to strong crush and export-oriented industries, while EU exports are more limited due to higher domestic demand for oil and meal. India, China, and Turkey sunflowerseed oil imports are anticipated to see the largest increases. China leads growth for sunflowerseed meal imports, with higher global supplies enabling a return to previous import levels. Ending stocks of sunflowerseed and products are expected to rise in 2026/27 due to the rebound in global supplies.

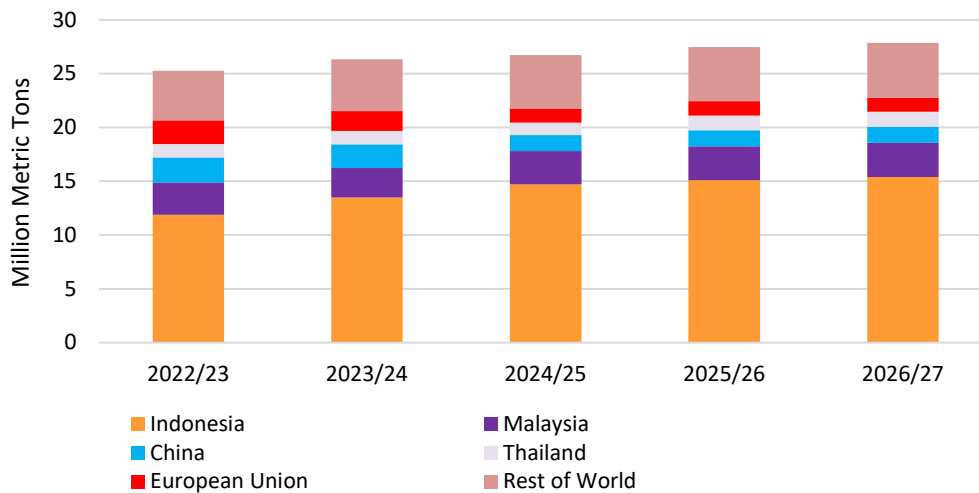

### Sunflowerseed Oil Exports and Global Consumption

### PALM OIL

Global palm oil production for 2026/27 is forecast to expand marginally. Indonesia production modestly grows to a new record, while Malaysia output declines slightly. Palm oil trade is forecast to remain nearly unchanged from 2025/26 as top producing countries adjust domestic policies and maintain biodiesel and food programs that spur domestic consumption and reduce exportable supplies. Domestic consumption is expected to reach new peaks with increased food use in Indonesia, Thailand, and the United States. Industrial consumption continues to grow to an all-time high on strong demand from the biodiesel and oleochemical sectors, especially in Indonesia. Global ending stocks decline as greater consumption outstrips production gains.

### Global Palm Oil Industrial Consumption

## Data Series Revisions and PSD Database Changes

### Ethiopia Palm Oil Import Revision

Ethiopia palm oil imports are revised for 2007/08 through 2025/26 to adopt official statistics from the Ethiopia Revenue and Customs Service. Domestic consumption and stocks are adjusted in line with import changes.

### PSD Changes for Fish Meal, Copra, and Cottonseed

Beginning in 2026/27, production, supply, and distribution (PSD) tables for fish meal for all countries and copra and cottonseed tables for some countries are discontinued. Historic estimates will remain available for years prior to 2026/27. The following are discontinued:

Fish Meal	Cottonseed Oilseed	Cottonseed Meal	Cottonseed Oil	Copra Oilseed	Copra Meal	Coconut Oil
Australia	Chad	Chad	Chad	Mozambique	Mozambique	Australia
Canada	Egypt	Egypt	Egypt	Samoa	Taiwan	Iran
Chile	Indonesia	Ethiopia	Iran			Iraq
China	Iran	Iran	Kyrgyzstan			Mozambique
Colombia	Kyrgyzstan	Kyrgyzstan	Madagascar			Norway
Ecuador	Madagascar	Madagascar	Mozambique			Russia
European Union	Mozambique	Mozambique	New Zealand			Samoa
Faroe Islands	Nigeria	Nigeria	Nigeria			Singapore
Iceland	Paraguay	Paraguay	Paraguay			South Africa
Indonesia	Saudi Arabia	South Africa	South Africa			Switzerland
Japan	South Africa	Sudan	Sudan			Taiwan
Korea, South	Sudan	Syria	Syria			Turkey
Malaysia	Syria	Tanzania	Tanzania			
Mexico	Tanzania	Togo	Togo			
Morocco	Togo	Uganda	Uganda			
New Zealand	Uganda	Zimbabwe	Zimbabwe			
Norway	Zimbabwe					
Peru						
Philippines						
Russia						
Senegal						
South Africa						
Taiwan						
Thailand						
Turkey						
United Kingdom						
United States						
Vietnam						

## **OVERVIEW 2026/27**

Global oilseed production is higher in 2026/27 on increases in Brazil, U.S., and Argentina soybeans, as well as Ukraine and Russia sunflowerseed. Accordingly, crush, trade, and ending stocks are all expected higher. Crush is elevated on gains for U.S., Brazil, China, and Argentina soybeans. Ukraine, Russia, and EU sunflowerseed crush also contribute to growth. Oilseeds trade is forecast higher on U.S. and Brazil soybean exports. Global oilseed carryout is up slightly on Argentina soy and Russia sunflowerseed, not offset by a significant reduction in U.S. soybean stocks.

Global meal trade is increased on growing shipments of U.S. and Brazil soybean meal and Ukraine and Russia sunflowerseed meal. Global oil production is forecast higher on increases to China and U.S. soy oil, Indonesia palm oil, and Ukraine and EU sunflowerseed oil. Overall oil trade is expected to grow on Indonesia palm oil and Ukraine sunflowerseed oil exports.

The projected U.S. season-average farm price for soybeans is \$11.40 per bushel.

## **OVERVIEW 2025/26**

Global oilseed production is raised slightly on higher Uzbekistan cottonseed and India soybeans, not offset by lower Senegal peanuts. Oilseed trade is lower on U.S. and Benin soy exports. Global crush is increased on higher Canada rapeseed and Uzbekistan cottonseed. Global oilseed carryout is increased on higher Argentina soybeans.

Global protein meal trade is reduced on Brazil soybean meal and Indonesia palm kernel meal, not offset by higher China rapeseed meal exports. Global vegetable oil production is raised on higher Thailand palm oil. Global vegetable oil trade is raised on higher Argentina and China soybean oil exports. Vegetable oil carryout is reduced on lower stocks of Indonesia palm oil and China soybean oil.

The projected U.S. season-average farm price for soybeans is raised 10 cents at \$10.40 per bushel.

## **EXPORT PRICES**

Soybean prices continued to rise over the past month. Weather delays for the Argentine harvest and a sliding U.S. dollar bolstered U.S. prices. EU rejections of Brazil and Argentina soybean meal due to inclusion of an unapproved genetic event caused a temporary spike in U.S. soybean meal in late April with South American meal temporarily dropping. Following this occurrence, soybean meal prices for all origins declined on expectations of ample crush across all exporters.

Brazil and Argentina soy oil prices fell over the past month while U.S. soy oil prices rose. Increased crushing in South America bolstered exportable supplies, pressuring prices. U.S. soybean oil prices approached the highest levels since 2022 on expectations of higher demand from the biofuel industry. Palm oil prices declined modestly on a reduced soybean oil price benchmark, slackening India demand, and a strong Malaysia ringgit. Palm oil is now costlier than South America soybean oil as proposals to boost usage for biodiesel in both Malaysia and Indonesia prompts efforts to secure physical supplies.

# **ENDNOTES**

## **REGION DEFINITIONS**

North America: Canada, Mexico, the United States

Central America: Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Caribbean: Cuba, Dominican Republic, Haiti, Jamaica, Trinidad and Tobago

South America: Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela

EU: Austria, Belgium/Luxembourg, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden. Effective January 1, 2021, the separation of the United Kingdom (UK) from the European Union (EU) was complete, including trade between both entities. Starting in May 2021 with the release of 2021/22 data, grain PSDs reflect EU27 (shown in the PSD system as “European Union”) and UK separately. Beginning with the release of 2021/22 data, historical data for both EU27 and the UK are provided for 5 years (2016/17 through 2020/21).

Other Europe: Albania, Bosnia and Herzegovina, Former Yugoslavia, Gibraltar, Iceland, North Macedonia, Montenegro, Norway, Serbia, Switzerland, United Kingdom

Former Soviet Union: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan

Middle East: Afghanistan, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, Turkey, United Arab Emirates, and Yemen

North Africa: Algeria, Egypt, Libya, Morocco, Tunisia

Sub-Saharan Africa: all African countries except North Africa

East Asia: China, Hong Kong, Japan, South Korea, North Korea, Macau, Mongolia, Taiwan

South Asia: Bangladesh, Bhutan, India, Nepal, Pakistan, Sri Lanka

Southeast Asia: Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, Vietnam

Oceania: Australia, Fiji, New Zealand, Papua New Guinea

## OTHER NOTES

**Marketing Years (MY):** MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

**Stocks:** Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

**Consumption:** World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

**Trade:** All PSD tables are balanced on the different local marketing years.

### Oilseeds HS Codes

	Seed	Meal	Oil
Soybeans	1201	2304, 230250, 120810	1507
Peanuts	Unshelled: 120210, 120241 Shelled: 120220, 120242, 120230, 200811XX <sup>[1]</sup>	2305	1508
